## G-E Types M and D Dry-Type Distribution Transformers

Single Phase, 60 Cycles, Air-Cooled

For 2400/4160Y-Volt Circuits

Type M

Type D

APPLICATION.—For indoor service in locations where conditions of dust or moisture are not abnormally severe, and where ventilation is not too restricted. They do not require fireproof vaults, and hence can be installed close to the load center, eliminating long and costly runs of secondary copper, and improving voltage conditions at the load. All sizes designed for completely metal enclosed connections, eliminating all exposed live parts.

Kva. Incl.	Low Voltage Rating	Low Voltage Leads Can Be Connected for
1½-75	120/240	120 2-Wire, 240 2-Wire, or 240/120 3-Wire
100-200	120/240	
250-500	240/120	240 2-Wire, or 240/120 3-Wire
1½-75	240/480	240 2-Wire, 480 2-Wire, or 480/240 3-Wire
100-200	240/480	
250-500	240/480	240 2-Wire, or 480 2-Wire
1½-75	600	600 2-Wire
100-500	600	

SERVICE.—Suitable for indoor installation only.

## G-E Type HS Oil-Immersed Distribution Transformers

## Single Phase, 60 Cycles, Self-Cooled

The G-E Type HS distribution transformer offers the highest degree of service reliability, backed by careful attention to all details of manufacture, including the selection and preparation of the raw materials used, the adoption of the most progressive manufacturing processes, and the constant improvement of transformer design.

Among the most recent of these improvements is the wound-core construction, identified by the G-E trade-mark Spirakore.

This new design, now furnished on all sizes, results in higher efficiency at heavy loads, better voltage regulation at higher power factors, low exciting current, smaller size, and lighter weight.

The tanks are of all-welded steel with fins, corrugations, or cooling tubes in the larger sizes to provide ample radiating surface for the dissipation of heat. Each tank is given two coats of specially selected Glyptal paint, each coat oven dried, resulting in an attractive and durable finish. For complete information, ask for Bulletin GEA-2600.

Small Distribution Transformer with Low Voltage Tank Wall Bushings

Large Distribution Transformer with Cooling Tubes and High Voltage Cover Bushings

Typical Interior Assembly of Large Spirakore Transformer

Interior Assembly of Small Spirakore Transformer

## For 480 or 600-Volt Circuits

**APPLICATION.**—By connection of the low voltage leads, transformers are arranged for series or multiple two-wire service, or for three-wire service.

**SERVICE.**—Suitable for outdoor or indoor installation.

**MOUNTING.**—Sizes 100 kva. and smaller are suitable for direct pole mounting.

## For 4160-Volt Circuits

**APPLICATION.**—These transformers are to provide service where it is more economical or desirable to connect transformers across phases than between line and neutral on 2400-4160-volt Y circuits. The use of these transformers gives the same service voltages as 10:1 ratio transformers connected between line and neutral.

By connection of low voltage leads, transformers are arranged for series or multiple two-wire service, or for three-wire service.

**SERVICE.**—Suitable for outdoor or indoor use.

**MOUNTING.**—Sizes 100 kva. and smaller are arranged for direct pole mounting.

Note: Line 1 is also available without high voltage taps.

## For 7200 and 12,470Y-Volt Circuits

APPLICATION.—By connection of low voltage leads, transformers having low voltage rating of 120/240 or 240/480 are arranged for series or multiple two-wire service, or for three-wire service.

SERVICE.—Suitable for outdoor or indoor installation.

MOUNTING.—Sizes 100 kva. and smaller are arranged for direct pole mounting.

## For 7200 and 12,470Y-Volt Circuits (Con't.)

## G-E Type HSBA Oil-Immersed Distribution Transformers

With Self-Contained Lightning Protection and Overcurrent Protection—Single Phase, 60 Cycles

APPLICATION.—By connection of the low-voltage leads to the bushing terminals inside the tank, transformers with low-voltage rating of 120/240 are arranged for series or multiple two-wire service, or for three-wire service.

### High-Voltage Pocket Bushings

**Class A.**—For universal use on delta and Y circuits.

Complete with:

- Two high-voltage bushings;
- Two pellet lightning arresters;
- Tank isolating gap;
- Low-voltage neutral gap;
- Internal high-voltage fuse;
- Low-voltage circuit breaker;
- Overload signal lamp (optional on 1.5 and 3 kva.);
- Support lugs for direct pole mounting.

### For 2400 and 4160Y-Volt Circuits

Name Plate Voltage Rating:  
2400/4160Y to 120/240 Volts

### High-Voltage Cover Bushings

Type HSBA transformers, in Class A, are also available for 7200/14,470Y and 7620/13,200Y-volt circuits. These ratings have high-voltage cover bushings.

**Class B2.**—For use on solidly grounded common-neutral circuits with the tank solidly grounded.

Complete with:

- One high-voltage bushing;
- One clamp-terminal tank-grounding connector;
- One pellet lightning arrester;
- Low-voltage neutral link bolted to tank externally;
- Internal high-voltage fuse;
- Low-voltage circuit breaker;
- Overload signal lamp (optional on 1½ and 3 kva.);
- Support lugs for direct pole mounting.

### For 7200 and 12,470-Gr-Y-Volt Circuits

Name Plate Voltage Rating:  
12,470 Gr-Y/7200 to 120/240

## G-E Type HS Oil-Immersed Rural-Line Transformers

In Accordance with R.E.A. Requirements

These transformers are of the single-high-voltage-bushing design, with one end of the high-voltage winding permanently connected to the tank, which in turn is to be solidly grounded by connection to the common system neutral.

These transformers offer the utmost in service reliability as they embody the same perfection of detail in design and construction as the standard Type HS distribution transformer.

Each unit complete with:

- One high-voltage cover bushing;
- Handhole in cover;
- Three low-voltage tank-wall bushings;
- Provision for direct pole mounting with the low-voltage bushings 90 degrees from the pole;
- Two mounting positions, on opposite sides of tank;
- Two clamp-terminal tank grounding connectors;
- Low-voltage neutral grounded to tank.

### For 7200 and 12,470-Gr-Y-Volt Circuits

APPLICATION.—By connection of the low voltage leads to the bushing terminals inside the tank, transformers are arranged for series or multiple two-wire service, or for three-wire service.

#### Name Plate Voltage Ratings:

12470 Gr-Y/7200 to 120/240—(3) Approx. 4½ Per Cent Taps Below 7200 Volts (Lowest Tap Is Reduced Kva.)

No.	Each	Kva. Cont. 55°C. Rise	Oil Req. Gal.	Approx. Ship. Wt., Lb. Incl. Oil

31H892	418.00	10	10¾	305
31H893	538.00	15	17½	470
31H894	736.00	25	25	645

## G-E Type HSBA Oil-Immersed Rural-Line Transformers

In Accordance With R.E.A. Requirements

They embody the same reliability as the conventional Type HS transformer. Lightning protection is afforded by a hi-stroke rural arrester mounted directly on the tank, and overcurrent protection is provided by a low-voltage circuit breaker mounted inside the tank, under oil.

Each unit complete with:

- One high-voltage cover bushing;
- One hi-stroke rural arrester;
- Internal high-voltage fuse;
- Handhole in cover;
- Overload signal lamp (on sizes 5 kva. and larger);
- Three low-voltage tank-wall bushings;
- Internal low-voltage circuit breaker with external operating handle;
- Provision for direct pole mounting with low-voltage bushings 90 degrees from the pole;
- Two mounting positions, on opposite sides of tank;
- Two clamp-terminal tank grounding connectors;
- Low-voltage neutral grounded to tank.

### For 7200 and 12,470 Gr-Y-Volt Circuits

APPLICATION.—By connection of the low voltage leads to the bushing terminals inside the tank, transformers are arranged for series or multiple two-wire service, or for three-wire service.

#### Name Plate Voltage Rating:

12,470 Gr-Y/7200 to 120/240—(3) Approx. 4½ Per Cent Taps Below 7200 Volts (Lowest Tap Is Reduced Kva.)

Cat. No.	Each	Kva. Cont. 55°C. Rise	Oil Req. Gal.	Approx. Ship. Wt., Lb. Incl. Oil

## G-E Type HS Pyranol Distribution Transformers

### Single Phase, 60 Cycles, Self-Cooled

This transformer generally affords substantial savings over the total installed cost of oil-filled equipment for all installations indoors or in confined locations.

Filled with Pyranol, G-E's synthetic insulating and cooling liquid, which has all of the desirable characteristics of mineral oil and, in addition, is non-inflammable. Pyranol transformers can, therefore, be safely installed indoors or in confined locations without expensive fireproof vaults. They can usually be installed at the load center, giving additional savings by the elimination of long and costly runs of secondary copper, with improved voltage regulation at the load.

Pyranol transformers have made possible savings on overall installed costs of as high as 23 per cent, compared with the cost of oil-filled equipment.

Recognized by the National Electrical Code.

Pyranol is suitable for use only in Pyranol transformers, designed especially for the purpose.

Send for Bulletin GEA-2048 for complete information.

#### For 480 and 600-Volt Circuits

APPLICATION.—By connection of the low voltage leads to the bushing terminals inside the tank, transformers are arranged for series or multiple two-wire service, or for three-wire service.

SERVICE.—Suitable for outdoor or indoor installation.

#### For 4800/8320Y-Volt Circuits

APPLICATION.—By connection of the low voltage leads to the bushing terminals inside the tank, transformers having a low voltage rating of 120/240 are arranged for series or multiple two-wire service, or for three-wire service. Transformers having low voltage rating of 240/480 are suitable for series and multiple two-wire service, or for three-wire service.

SERVICE.—Suitable for outdoor or indoor installation.

## For 4160-Volt Circuits

This transformer is to provide service where it is more economical or desirable to connect transformer across phases than between line and neutral on 2300/4000-volt Y circuits. The use of this transformer gives the same service voltages as 10:1 ratio transformers connected between line and neutral.

APPLICATION.—By connection of the low voltage leads to the bushing terminals inside the tank, transformers are arranged for series or multiple two-wire service, or for three-wire service.

SERVICE.—Suitable for outdoor or indoor installation.

## G-E Pellet-Type Distribution Lightning Arresters

For Circuits 1 to 15 Kv.

3 Kv. Maximum Permissible Line-to-Ground Voltage, with Standard Hanger

The electric elements consist of a column of pellets and a series-gap assembly. The pellet column forms the valve element, preventing the flow of system current following discharge, while the series gap isolates the valve element from the line until it is sparked over by a surge.

The pellets are made of lead peroxide, with a thin, porous coating of litharge, and are assembled in a porcelain-tube container with metal electrodes in contact with each end of the pellet column. The length of the column is proportional to the arrester voltage rating.

The series-gap assembly is sealed within a nitrogen-filled gap chamber, which is entirely isolated from the pellet valve column. This sealed gap chamber filled with dry nitrogen gas prevents the entrance of moisture and makes the arrester independent of atmospheric conditions, thereby assuring permanent freedom from current leakage and corrosion.

The elements of the arrester are contained in a porcelain tube with corrugated exterior. A porcelain cap is mechanically secured by weatherproof compound of high flow point.

This compound, however, is not depended on for sealing the arrester.

Well-glazed, wet-process porcelains are used in pellet arresters of all ratings. A flexible lead, securely soldered, provides for line connection.

The clamp-type ground terminal permits either one or two solid or stranded ground wires to be clamped to the arrester, eliminating connectors, splicing, soldering, and tapping. In this way, both labor and materials are saved.

After gap breakdown, discharge current begins to flow, and the resistance of the pellet valve column decreases as long as the current increases. When the current begins to decrease, the resistance increases, and to such an extent that, at the end of a discharge, the normal system voltage is unable to maintain a current flow through the arrester. This valve action prevents any arc or short-circuit attending discharge, and thereby avoids tripping of line breakers and blowing of sectionalizing fuses from lightning.

9 Kv. Maximum Permissible Line-to-Ground Voltage and Above, with Standard Hanger

## Hangers and Mountings

Altitude, 0 to 6000 Feet

The standard and special hangers which are available for pellet arresters will satisfy virtually all desired mountings of the arresters—alone, in combination with primary fuse cutouts, or on transformer tanks. It will be seen that the pellet-arrester porcelain has two mounting grooves providing for alternate positions of the arresters in either standard or special hangers, making it possible to balance either the clearances or the appearance of the installation. The arrester can be inserted in any hanger either before or after the hanger has been mounted.

## Pellet Type Arresters with Standard Hangers

## Number of Arresters Required at Installation

**For Table 1.** Use two arresters at each single-phase installation. Use three arresters at each 3-phase installation.

**For Table 2.** Use one arrester on phase wire at a single-phase installation made between phase wire and neutral. Use also on neutral wire, a neutral gap if voltage to ground is not over 300 volts; if because of unbalancing, voltage is between 300 and 1000 volts, use Model No. 9LA10B1 arrester. Use two arresters at a single-phase installation between outside phase wires. Use three arresters at each 3-phase installation.

**For Table 3.** Use one arrester at each installation.

## G-E Pellet-Type Distribution Lightning Arresters

For Circuits 1 to 15 Kv.

## Special Hangers

In addition to the standard hangers shown on the preceding page, pellet arresters are available with special hangers, as shown in the following sketches. Arresters with special hangers have the same price as arresters of the same rating with standard hangers. To determine the number of an arrester with a special hanger, first select the standard arrester from Table 1, 2, 3, or 4, and then refer to Table 5 for the number of the corresponding arrester with the special hanger desired.

For complete description, ask for Bulletin GEA-2975.

## G-E Hi-Stroke Rural Lightning Arresters

The new G-E hi-stroke arrester is a heavy duty expulsion-type arrester, having exclusive features of construction. Designed specifically for rural systems, it has high lightning discharge capacity and combines an efficiency in impulse protective level and long operating life heretofore unavailable in expulsion-type arresters. Hi-stroke arresters for separate mounting utilize the same arrester element (0-1200 amperes rms. interrupting rating) and have the same performance characteristics as those furnished since 1944 on Type HBA rural line transformers and which have already established an excellent service operating record on many rural systems.

## Separate Mounting

Arrester for Mounting on Crossarm, Using Clamp-Type Hanger

\*Interchangeable with 9 kv. pellet arrester mounted on tank bracket of early designs of Type HBA, 7200-volt, single-bushing transformers.

†Will also accommodate enclosed or open-type dropout cutouts listed in Tables 1 and 3 respectively.

‡Will also accommodate the flip-open cutout listed in Table 2.

§Cutouts rated 7500/12,500 Gr Y volts can be used on grounded-neutral circuits where the voltage that an individual cutout is required to interrupt does not exceed 8 kv. rms.

### G-E Low Voltage Pellet-Type Lightning Arresters

0 to 650 Volts—Altitude, 0 to 6000 Feet

Model No. 9LA10A202 Single-Pole Pellet Arrester with Mounting Bracket

Model No. 9LA10A204 Double-Pole Pellet Arrester with Mounting Bracket

For outdoor service, crossarm or pole mounting, on railway signal lines or secondary power lines, for protection of railway signal transformers, distribution-transformer secondaries, autotransformer boosters, cables, and other line apparatus in the 0 to 650-volt class.

The single-pole arrester unit consists of a series gap and a pellet valve column completely housed in a wet-process porcelain container.

The double-pole arrester consists of two single-pole units mounted in a single hanger. This arrester is economically advantageous on single-phase, 2-wire circuits.

Model No.	Each	No. of Poles	Circuit Voltage Rating Rms.	Maximum Permissible Line-to-Ground Voltage, Rms.	Ship. Wt. Lb.
*9LA10A202	\$6.50	1	0-650	650	2
†9LA10A204	13.00	2	0-650	650	4

\*Use two arresters at each single-phase installation and three arresters at each 3-phase installation.

†Use one arrester at each single-phase installation.

### G-E Pellet Meter or Service Protectors

115/230 Volts—Altitude, 0 to 6000 Feet

Model No. 9LA15A1 Pellet Protector for Direct Metal-Clad Mounting to Bottom Knockout Hole

Model No. 9LA15A4 Pellet Protector with Bracket for Separate Mounting

The indoor protector is designed to permit direct mounting in the knockout holes of a service switch, fuse box, meter-connection cabinet, or meter case. In some applications, it may be preferable to locate the protector on the building wall at the point where the exposed secondary circuit enters the conduit gooseneck or the service cap of the enclosed service wiring. Therefore, another design is provided for such separate outdoor mounting.

For 115-volt, single-phase, 2-wire; or 115/230-volt, single-phase, 3-wire grounded neutral, secondary services. For indoor or outdoor service.

Model No.	Each	Maximum Permissible Line-to-Ground Voltage, Rms.	Type of Mounting	Net. Wt. Lb.
9LA15A1	\$6.50	175	(Mounting to Bottom Knockout Hole	2
9LA15A2	7.25	175	Mounting to Side Knockout Hole	2½
9LA15A4	4.50	175	Separate Bracket Mounting	2½

For Complete Description, Ask for Bulletin GEA-2977

### G-E Thyrite Meter or Service Protectors

0 to 650 Volts—Altitude, 0 to 6000 Feet

Model No. 9LA12B3 Thyrite Protector, Three-Pole, for Indoor Installation

Model No. 9LA12B6 Thyrite Protector, Three-Pole, with Conduit Weather Cap and Mounting Bracket for Outdoor Installation

For protection of watt-hour meters, industrial power service entrances, or consumer apparatus and appliances on single or polyphase secondary circuits or services in the 0 to 650-volt class.

The case of the protector is of welded steel. Each single-pole assembly has a series gap and a Thyrite disc valve element 3 inches in diameter and  $\frac{5}{16}$  inch thick. These single-pole elements are mounted in a Textolite container, and one, two, or three of these assemblies (for single, double or three-pole protectors respectively) are sealed within the outer steel case. The bottom of the case bears complete nameplate data.

#### Indoor Service—For Mounting to Knockout Hole

The indoor design is arranged for mounting directly in a knockout hole in the meter case or connection box.

Model No.	Each	No. of Poles	Circuit Voltage Rating Rms.	Maximum Permissible Line-to-Ground Voltage, Rms.	Net Wt. Lb.
9LA12B1	\$16.00	1	0-650	650	4
9LA12B2	22.00	2	0-650	650	4½
9LA12B3	25.00	3	0-650	650	5

#### Outdoor Service—For Separate Bracket Mounting

The outdoor design is provided with a conduit weather cap and mounting bracket as illustrated.

9LA12B4	\$18.00	1	0-650	650	4½
9LA12B5	24.00	2	0-650	650	5
9LA12B6	27.00	3	0-650	650	5½

#### Number of Arresters Required at Installation

Use two single-pole arresters at each single-phase installation. Use three single-pole arresters at each 3-phase installation. Use one 2-pole arrester at each single-phase installation. Use one 3-pole arrester at each 3-phase installation.

## G-E Equipment for the Lightning Protection of A.C. Rotating Machines

Thorough studies have advanced the knowledge of protection for a.c. rotating machines from lightning voltages. This problem applies to a.c. generators, synchronous condensers, and large motors subjected to impulse voltages, either from directly connected exposed overhead lines, or from those transmitted to the machine through transformers.

Lightning protection of a.c. rotating machines is obtained by a combination of line-type arresters, located a short distance out from the station on each exposed line which is directly connected to the machine; by special Pyranol filled protective capacitors, and by station-type Thyrite lightning arresters in parallel with the protective capacitors, installed on the bus or at the machine terminals.

This equipment is easily installed and requires no maintenance. The fixed charges are insignificant. When it is con-

sidered that as high as 25 per cent of machine failures have been known to be caused by lightning, and that a single machine failure can result in a loss which is far greater in comparison with the cost of protective equipment, adequate protection is plainly a low cost insurance and a sound investment.

Hundreds of equipments which represent the advanced form of protection from lightning have been applied since 1929. Some of the earliest applications were made for protection of machines which had failed repeatedly from lightning, and since the protective equipment was applied, no further failures have occurred.

The table below shows the G-E equipment required for any given service application, and is applicable for protection of machines of practically any type or manufacture.

Machine	Normal Phase-to-Phase Voltage Rating	*Connection	FOR INSTALLATION AT MACHINE TERMINALS OR ON MACHINE BUS				FOR INSTALLATION ON DIRECTLY CONNECTED EXPOSED OVERHEAD LINES

\*The same capacitors are applicable to either grounded or ungrounded neutral circuits. However, the arresters for machines 2400 volts and above have lower valve ratings for grounded-neutral circuits than for ungrounded-neutral circuits. The listing of arresters for grounded-neutral machines is premised on the circuit neutral's being solidly and directly grounded. If the machine neutral or circuit neutral is grounded through resistance or reactance, ask for assistance in making selection of arresters.

†The pellet arresters listed for machines 2400 volts and above, can also be used in place of station-type Thyrite arresters for application at the terminals of rotating machines below 1000 kva. This application is recommended if economy of protection necessitates lower cost though less efficient protection.

‡For indoor service only.

§These arresters are Thyrite meter protectors.

¶This arrester, Model No. 9LA1G295, rated 1.5 kv., provides somewhat better protection than the Model 9LA1G292 unit rated 9 kv., and can be used wherever there is little, if any, risk of the system line-to-ground voltage exceeding the arrester's maximum line-to-ground rating of 7.5 kv. rms., under any condition of operation.

||Where machines have no direct connection to exposed overhead lines, and where connection to transmission lines is not through Y-Y or autotransformers, use only one capacitor unit (0.25 muf.), line-to-ground.

\*\*Where machines are directly connected to exposed overhead lines, or are connected through Y-Y or autotransformers to transmission lines, use two capacitor units in parallel per phase to obtain a capacitance phase-to-ground of 0.5 muf. This method will limit reflections within the winding of delta connected machines or at the neutral point of Y-connected machines which have their neutrals isolated or grounded through a resistance that is higher than the surge impedance of the machine winding. In general, if the neutral of a machine is grounded through a resistance of less than 50 ohms, positive reflections at the machine neutral will not occur. If a machine neutral is grounded through a reactance of less than 5 ohms (60-cycle basis), positive reflections at the machine neutral will be negligible when 0.25 muf. capacitance phase-to-ground at the machines is used. Hence, when the machine neutral is grounded through a resistance of less than 50 ohms or through a reactance of less than 5 ohms (60-cycle basis), only one capacitor unit (0.25 muf. phase-to-ground) will be required. Where two or more machines are operated in parallel, with the neutral of only one machine grounded, the capacitor applied on the machine bus for protection of all machines, or applied at the terminals of machines having neutrals ungrounded, should be 0.5 muf. capacitance phase-to-ground (2 capacitor units in parallel per phase). This method limits impulse voltage reflections at the neutrals of those machines that have ungrounded neutrals.

NOTE: For altitudes above 6000 feet, ask for engineering recommendations.

\*Capacitor rating should be selected according to the normal phase-to-phase voltage rating of rotating machine, regardless of whether circuit is grounded or ungrounded neutral. Capacitor can be used where machine phases-to-phase voltage does not exceed 10 per cent above listed capacitor rating. These protective capacitors are suitable for 25, 40, 50, or 60-cycle systems.

For Complete Description, Ask for Bulletin GEA-1743

## G-E Reclosing Fuse Cutouts

5000 Volts, 50 Amperes

7500/12,500 Gr-Y Volts,  
50 Amperes

### Reclosing Fuse Cutouts with Clamp-Type Crossarm Hangers

The G-E reclosing fuse cutout restores service within one second after a temporary fault, by a second fuse link which is connected in the circuit after the first fuse link blows. This interruption is so brief that motors and other devices will continue in service.

If the line is patrolled after a storm, and a cutout found that indicates the first fuse has blown, this fuse link can be easily renewed by the use of a jumper, without interrupting service.

When the first fuse link is blown, positive visual indication is given by a red indicator which projects below the door and is readily visible from the ground. In addition, the door of the 50-ampere cutout is pushed out at bottom.

When the second fuse link is blown, the reclosing door drops out to a horizontal position, indicating that the circuit is open. All current transfer contacts are silver plated.

Cutout in Indicating Position

The cutout is entirely sleet-proof and will restore service after a temporary fault by connecting the second fuse link into the circuit under the most severe sleet conditions, with the door firmly frozen shut.

Cutout in Drop-Out Position

### Cutout Complete with Two Fuse Holders and †Clamp-Type Crossarm Hanger

No.	Each	*Voltage Rating	†Current Rating Amperes	Ship. Wt. Lb.
9F6R100	\$30.00	5000	50	13
9F6R200	33.00	7500/12,500 Gr-Y	50	14
9F6R300	60.00	5000	100	32
9F6R400	65.00	7500/12,500 Gr-Y	100	36

\*Cutouts rated 7500/12,500 Gr-Y volts may be used on grounded neutral circuits where the voltage that an individual cutout has to interrupt does not exceed 8 kv. and where the insulation to ground meets the operating requirements.

†The interrupting capacity of 50-ampere cutouts is 1200 rms. amperes at 60 cycles; 100-ampere cutouts, 3000 rms. amperes at 60 cycles.

†These cutouts in 50-ampere ratings can be supplied on order with any of the special hangers listed for the enclosed indicating and drop-out fuse cutouts.

### Complete Reclosing Door for Use with G-E Indicating and Drop-Out Fuse Cutout, 5000 or 7500/12,500 Gr-Y Volts

The same housing is used as with the standard G-E enclosed indicating fuse cutouts. Therefore, the reclosing door can be installed on any 50 or 100-ampere indicating and drop-out cutout now in service.

No. 73X710, for 50-Ampere Cutout.....each \$25.00  
No. 73X854, for 100-Ampere Cutout.....each 45.00

Send for Bulletin GEA-3448 for Complete Description

## G-E Enclosed Indicating and Dropout Fuse Cutouts

Cutout provides for positive indication of outages in either of two ways, depending on preference:

**As an Indicating Cutout.** When a fuse link melts, door opens at bottom sufficiently to give visual indication that circuit is open.

**As a Dropout Cutout.** Door opens to horizontal position. This not only gives indication that circuit is open, but also removes fuse holder from circuit. In this position, door and fuse holder are isolated, and open end of fuse holder is protected from even a driving rain.

Change from indicating to dropout operation is easily made. All current transfer contacts are silver plated.

Exclusive features: complete interchangeability of three doors—indicating and dropout door with single fuse holder, automatic reclosing door with two fuse holders, and disconnecting-blade door; same doors can be used with 5000-volt or 7500/12,500 Gr-Y-volt cutouts in same amp. rating.

Indicating and dropout cutouts can easily be converted into disconnecting switches by substituting disconnecting-blade door, complete with flexible copper connector, for the door and fuse holder. These disconnecting doors are not designed to open circuit while carrying load current.

A disconnecting door installed in 50-ampere cutout permits cutout to be used as a 100-ampere disconnecting switch. One installed

No. 3995930G1 100-Ampere Disconnecting-Blade Door For 50-Ampere Cutouts

## With Disconnecting-Blade Door

in 100-ampere cutout can be used as 200-ampere disconnecting switch. Where circuit is to remain disconnected for a period of time, flexible connector is uncoupled from upper terminal on door, pulled down, and then spring-actuated contact arm is pushed back and securely hooked to door so that it is completely out of circuit when door is closed. Flexible connector then protrudes from bottom of cutout, giving positive visual indication that the circuit is disconnected.

## Cutout with Disconnecting Blade Instead of Fuse Holder

No.	Each	*Voltage Rating	Current Rating, Amp.	Type of Hanger	Ship. Wt., Lb.

## Hangers

Clamp-type crossarm hanger for 50-ampere fuse cutout provides for mounting cutout in vertical position or at an angle. In either position, cutout can be turned to any desired horizontal angle, and locked firmly in position.

The 100-ampere cutout, heavier than the 50-ampere, is arranged for vertical mounting only. Hanger is identical with smaller one, except that arm has only one hole, and parts are stronger.

In addition to the clamp-type hanger, 50-ampere fuse cutouts are available with hangers for combination of mounting with G-E pellet arresters.

Combination Crossarm Hanger

Combination Pole Hanger (T-Bracket Included with Arrester, Not with Cutout)

## G-E Porcelain-Enclosed Non-Indicating Fuse Cutouts

No. 6X2433A, 50-Ampere,  
5000 Volts

No. 6X242A, 50-Ampere,  
7500/12500 GR-Y Volts

No. 6X240A, 100-Ampere,  
7500/12500 GR-Y Volts

The G-E porcelain-enclosed fuse cutout provides a high degree of overcurrent protection under all conditions.

Housing is made of G-E wet-process porcelain. Barriers, which mesh with barriers on the Textolite door, prevent hot conducting gases from bridging the space between the contacts.

Full floating contact clips and terminals are self-aligning. All current carrying contacts are silver plated.

The fuse-holder tube consists of a vulcanized fiber tube over which is wound laminated Textolite having a linen-fabric base. In this way, a strong, dense, and homogeneous tube without molding seams is produced.

6X2402A	28.50	7500/12,500 Gr-Y	200	Clamp	33

\*Cutouts rated 7500/12,500 Gr-Y volts may be used on grounded neutral circuits where the voltage that an individual cutout has to interrupt does not exceed 8 kv. and where the insulation to ground meets operating requirements.

†The interrupting capacity of 50-ampere cutouts is 1200 rms. amperes at 60 cycles; 100-ampere cutouts, 3000 rms. amperes at 60 cycles.

### Hangers

In addition to the clamp-type crossarm hanger illustrated above, 50-ampere porcelain-enclosed non-indicating fuse cutouts are available with the combination crossarm hanger shown below.

The clamp-type crossarm hanger for the 50-ampere fuse cutout provides for mounting the cutout either in a vertical position or at an angle. In either position, the cutout can be turned to any desired horizontal angle. The 100-ampere cutout, being heavier than the 50-ampere cutout, is arranged for vertical mounting only. Its hanger is identical with that of the smaller cutouts except that the arm has only one hole, and the parts are proportionately stronger.

G-E Heavy Duty Enclosed Fuse Cutouts

200-Amp., 5000-Volt Cutout Mounted on Crossarm

General Electric offers a 5000-volt, 200-ampere, indicating fuse cutout which has the same outstanding advantages of safety, reliability, and ease of fuse renewal as the G-E porcelain-enclosed indicating and dropout fuse cutouts.

This cutout has an interrupting rating of 5000 rms. amperes at 60 cycles. It is particularly applicable for use on banks of transformers that feed industrial plants, or for sectionalizing heavy feeders.

The fuse cutout can be converted to a 400-ampere disconnect cutout simply by replacing the fuse holder with a disconnect door.

With Interchangeable Doors

G-E Indicating Secondary Fuses

Outdoor Type

The G-E indicating secondary fuse is an outdoor cartridge-type, non-renewable fuse designed to permit transformer secondary banking, transformer secondary protection, and the isolating of service entrance faults at the minimum initial expense.

The fuse element is totally enclosed and protected from the weather and cannot be twisted when swayed by the wind.

It can easily be installed with any type of overhead secondary construction by means of conventional solderless connectors.

For circuits 600 volts and below.

Packed 25 fuses in a carton, 200 amp. and less.

Packed 5 fuses in a carton, 250 and 300 amp.

G-E Open Fuse Cutouts

100-Amp., 7500-Gr-Y-Volt Cutout Mounted On Crossarm

The G-E open-type dropout fuse cutout provides over-current protection throughout the full range of fault currents up to their rated interrupting capacity, on distribution circuits of 15,000 volts and below.

Their new bird-proof construction, attained by cementing the mounting support and upper and lower contact supporting studs into the porcelain insulator in such positions that the mounting support and hanger are confined to the opposite side from the live parts, makes possible a freedom from unnecessary outages heretofore unattained with any open-type cutout.

The fuse holder, which drops to completely open position for easy identification of blown fuse, is mounted on hinge located directly under the insulator, thereby directing the recoil force in line with the center line of the insulator.

A malleable iron switch hook, mounted on a 42-inch treated maple pole, suitable for the operation of open-type or enclosed fuse cutouts.

Shipping weight, 3 pounds.

No. 2928531G2.....each \$5.00

\*These cutouts, rated 100 amperes on 100 per cent basis, provide short-circuit operation over the full range of fault currents, with both large and small fuse links, at full rated voltage under severe circuit conditions.

†Cutouts rated 7500/12,500 volts Gr-Y can be used on grounded neutral circuits where the voltage that an individual cutout is required to interrupt does not exceed 8 kv. and where the insulation to ground meets the operating conditions.

## G-E D.C. Capacitor-Type Arresters For D.C. Railway Circuits

0-750-Volt D.C. Capacitor-Type Arrester with Molded Insulation Cover Removed from One Terminal

The protection of d.c. electric transportation systems involves principally the protection of d.c. generators or motors. This necessitates the reduction of turn-to-turn stresses as well as major insulation stresses from line to ground. D.c. capacitor-type arresters, because of their inherent characteristics in sloping off the amplitude of the wave, provide a high degree of protection for such systems.

\*Includes mounting bracket.

## G-E Flip-Open Fuse Cutouts

The G-E flip-open fuse cutout provides overcurrent protection by means of a fuse link, without the conventional hinged fuse holder tube. Expulsion action is obtained entirely by the fuse link tube, which is a unitary part of the fuse link. The fuse link is supported in tension between spring contact arms, which pull the lower cable terminal out of the fuse link tube when the fuse link melts.

Its simple construction provides an inexpensive cutout for rural-line service where the circuit conditions impose a less severe interrupting duty on the cutout, and where the advantage of the hinged fuse holder type of conventional cutout may be dispensable.

Mechanical and electrical reliability is embodied in these cutouts. Their ability to meet the shocks and stresses of service has been demonstrated by flashover tests, both wet and dry, short-circuit tests, tension test of the metal-to-porcelain joints, and accelerated life tests.

## Hi-Surge, Flip-Open Fuse Links

1	Equivalent to	2	9F1FH1	\$.85
2	Conventional	2	9F1FH2	.85
3	5-Amp. Fuse	2	9F1FH3	.85

## A 100% "N"-Rated Double-Duty Fuse

Low Current—1, 2, and 3-Ampere Rating for Overcurrent Protection

High Current—5-Ampere Characteristic for Withstanding Surges

## For Transformer Installations, They Offer These Outstanding Advantages:

- Improved Overcurrent Protection** where 5-ampere minimum fusing has previously been used.
  - With the same freedom from blowing by motor starting, inrush lightning, or other surge currents.
  - Without rechecking their coordination with line-sectionalizing devices.
- Reduced Blowing by Surges** where 1, 2, or 3-ampere conventional fuses have previously been used.
  - With the same overcurrent protection.
  - With no need for rechecking their coordination with line-sectionalizing devices, in the majority of applications.

## In These Applications of Hi-Surge Fuse Links, the Only Factors to Consider Are:

- That overload currents do not exceed the fuse rating.
- That they coordinate with service entrance fuses.

## G-E Fast-Blowing Universal Cable-Type Fuse Links

For Use with All G-E Reclosing, Enclosed Indicating and Drop-Out, Enclosed Non-Indicating, and Open Type Fuse Cutouts

These fuse links are rated on the 100 per cent basis and are designed to carry their rated current without blowing, and to blow at not over 230 per cent rating within five minutes. All G-E fast-blowing universal cable-type fuse links may be operated safely and continuously at 100 per cent rating, with a maximum temperature rise of 30°C. for conducting parts of the fuse holder above an ambient temperature of 40°C.

## G-E Secondary Indicating Fuse Cutouts

The G-E secondary fuse cutout gives positive indication that the circuit is open whenever a fuse link is blown, by pushing the Textolite housing down from the upper terminal cap and displaying the red fuse holder tube which is readily visible from the ground. This secondary cutout makes transformer secondary banking, transformer secondary protection, and the isolating of service entrance faults economically possible.

The fuse link is protected from the weather; in this way, maintenance is minimized. The small size and light weight of the cutout enable it to be mounted in the space between secondary lines, attached directly to the line conductor, or mounted directly on the clamp terminals of a distribution transformer (using an adapter). Cutout can be easily and safely refused.

\*Rated interrupting capacity, 3000 rms. amperes at 60 cycles.

Send for Bulletin GEA-2261 for complete description.

## G-E Secondary Fuse Links

For Use with No. 9F7A1 Secondary Fuse Cutouts

The time-current characteristics of these links are identical with those of the G-E fast-blowing cable-type fuse links designed for coordination with motor-starting currents, with primary or secondary fuse links of other ratings, and with relays.

Packed 25 in a carton.

No.	Each	Ampere Rating "N" (100%) Basis	Ship. Wt. Lb. per Carton	No.	Each	Ampere Rating "N" (100%) Basis	Ship. Wt. Lb. per Carton

## G-E Universal Fuse Links

For Oil Fuse Cutouts Having Notched Carrier Plugs

Universal Fuse Link Mounted in Notched Fuse-Carrier Plug

Universal Fuse Link

### Time Current Characteristics

Universal fuse links, when used in G-E oil fuse cutouts of the proper rating, will carry continuously 100 per cent of the rated current of the fuse link. They will melt at approximately 150 per cent of their rating in 300 seconds (5 minutes).

### Application

These universal fuse links are designed for use in all oil fuse cutouts, 100 to 300 amperes, with Model No. in the 9F2E and 9F2D series. These cutouts all have notched fuse-carrier plugs, as illustrated.

Universal fuse links can also be used in all superseded designs of G-E oil fuse cutouts, in the No. 9F2C series or earlier (except 50-ampere, 2500-volt rating), simply by cutting a notch in the lower end of the wooden fuse-carrier plug. A template is included in each carton of universal fuse links to facilitate correct notching.

Packed 2 in a box; 5 boxes per carton.

Capacity Amperes 100% Rating	Model No.	Each	Ship. Wt., Lb. per Ctn. of 10

## G-E Oil Fuse Cutouts

**Pole Type**  
5000 Volts, 100 to 200  
Amperes; 7500 Volts, 100  
Amperes

**Subway Type**  
5000 Volts, 100 and 200  
Amperes; 7500 Volts, 100  
Amperes

**Pothead Type**  
100 and 200 Amperes

**No. 73X705 Expansion  
Chamber for Subway Type  
Cutouts**

**No. 294258  
Subway-Type  
Cutout with  
Pellet Vent**

The G-E oil fuse cutout is completely metal-enclosed, with a fusible element under oil, by which the circuit is broken safely and rapidly. Standard oil fuse cutouts are available in three designs for pole, subway, or pothead service on circuits up to 7500 volts and 300 amperes.

The U-shaped universal fuse links consist of laminated-metal terminal strips, forming the vertical legs and supporting a horizontal section of fusible alloy having a low melting temperature. This horizontal section is housed in a specially formed expulsion tube of insulating material. Fuse carrier is locked in place before circuit is closed.

Flame from arc is confined within housing, and prevents ignition of explosive gases and external damage.

Fuse link is under oil—this prevents deterioration from oxidation or electrolysis.

Gases are released, but oil is confined. Subway fuse cutouts have operated for years wholly submerged in water.

Fuse links are quickly and easily replaced. Oil level can be maintained without removing cutouts from service.

Heavy self-aligning contacts make possible repeated opening under load.

Cutouts may be fused closely to load, providing simultaneously, protection against overload and heavy short circuits.

G-E oil fuse cutouts are particularly applicable for subway service, for replacement of potheads, and for installations where high current-interrupting ability is required and where high-speed operation is essential. Other locations in which they can be used to advantage are:

Where quiet operation is desirable.

Where the cutouts are exposed to smoke, corrosive fumes, salt-air, explosive gases, or inflammable dust. All indoor installations.

Where it is desired to have no exposed live parts, whether the cutout is in the open or the closed position.

They are ideal for indoor industrial applications. As no flame is expelled, and as all live parts are completely enclosed, the oil fuse cutout best meets the requirements of the National Electrical Code.

## Pole Type

Model No.	Each	*Volts	Rated Capacity Amperes	Interrupting Cap., Amp., at 60 Cycles with Universal Fuse Links	SHIPPING WEIGHT POUNDS	Oil
9F2E2	\$37.00	4330	100	6000	62	9
9F2E3	49.00	4330	200	11000	113	21

9F2E13		5000	200	10000		

\*The 2500-volt cutouts are suitable for operation on 4000-volt Y-connected circuits with dead grounded neutral. In all cases, two cutouts are required between lines.

†For interrupting ratings when used with superseded plain or reactive links, refer to Bulletin GEA-732.

‡The bushings on Model Nos. 9F2D9 and 9F2D15 cutouts are not the separable-sleeve type, but are designed for connection to the cables using standard splicing material.

§With right-hand subway sleeve bushings.

¶With left-hand subway sleeve bushings.

||**Venting.** Subway-type cutouts usually require accessories for venting, either by means of an expansion chamber or pellet vent. Prices above do not include venting accessories which should be selected as follows:

No. 73X705 Expansion Chamber, for Use Where Complete Submersion Is Possible.....	each \$8.00
No. 294258 Pellet Vent, for Use Where Cutouts Are Not Subjected to Flooding.....	each 4.00

## Gang Operation of G-E Oil Fuse Cutouts

**Pole-Type Cutouts Arranged for Three-Phase Operation**

A simple and low cost, gang operated, three-phase assembly of standard G-E oil fuse cutouts can readily be made by the addition of a mounting rack and lever-operated mechanism for safely opening or closing the full-rated current on all three phases simultaneously.

## For Pole or Pothead Type Cutouts

Send for Bulletin GEA-732 for Complete Description

**G-E 30,000-Volt 0.5-KVA. Portable Oil Testers**

This oil tester affords a compact, convenient, and accurate means for testing oil in the field, as it combines in a single unit, a step-up transformer, a means for gradually raising the test voltage, a voltmeter to measure breakdown values, an automatic circuit breaker, and an oil-testing receptacle.

The successful operation of high voltage oil-insulated apparatus requires that the dielectric strength of the oil be maintained at a high value. Assurance that the oil is always satisfactory dielectrically is possible only by testing oil regularly.

All live parts of the equipment are enclosed and complete safety features assure full protection to the operator.

Furnished complete with 15 feet of 3-conductor attaching cord and plug.

No.	Each	Supply Voltage	Frequency Cycles	Shipping Weight Pounds
63G402	\$300.00	115	50 to 140	100
63G404	385.00	115	25 to 60	100
63G403	315.00	230	50 to 140	100
63G405	400.00	230	25 to 60	100

Send for Bulletin GEA-2935 for complete information.

**G-E No. 10-C Oil**

G-E No. 10-C Oil is a specially prepared insulating and cooling oil for use in transformers, feeder voltage regulators, and oil fuse cutouts.

The development of this oil and the attainment of proper characteristics and uniform quality have required the closest cooperation for many years between G-E engineers and oil refiners and involves a careful selection of proper crude oil, as well as the use and control of special refining processes applicable only to insulating oil.

Refined from selected grades of crude oil by refiners experienced in producing oil for this highly special application, this oil has the characteristics which provide both the cooling and insulating factors essential to transformer operation; it does not affect the transformer insulation, and is unaffected by these insulating materials. An important quality in transformer oil is long service life, the inherent resistance to sludge formation. Only oil known to have such properties should be used for this purpose.

**Matthews Reclosing Fuswitches**

Rating, 100 Amperes, 7500 to 15000 Volts

Three-shot, repeating rural line type cutout designed to give long, trouble-free service on branch lines or other locations where uninterrupted service is required. Can be mounted on pole or cross arm. When one fuse link melts from overload due to lightning, transient, short circuit, or any other cause, the first fuse holder drops

down to indicating position and second fuse holder comes into circuit in approximately 40 cycles. Service is quickly restored and Fuswitch is ready for two more operations.

No. 1810, 100 Amperes, 7500 Volts.....each \$112.00  
No. 1820, 100 Amperes, 15000 Volts.....each \$133.00

**Three-E Potheads****Indoor Types**

A complete line of Three-E indoor potheads is available in both open bushing and capnut styles. Aerial lugs, pothead bodies and entrance flanges can be supplied in all shapes and sizes to fit almost every installation requirement. Furnished as standard in 1, 2, 3, and 4 conductor units in all commercial ratings. Special potheads are also available.

**Disconnect Potheads**

Disconnect heads and dummy caps and studs are available as standard units to fit Three-E Capnut style Potheads shown.

Flexibility of these disconnect heads in fitting standard pothead studs has proved to be a very economical means of converting regular potheads into the disconnect type.

**Outdoor Capnut Potheads**

Suitable for either indoor or outdoor service these potheads feature one piece bodies with clamped bushings and front inspection plate. Construction is air and oil tight. Can be supplied as standard with many body styles and various types of entrance fittings to fit all requirements.

**Outdoor Open Bushing Potheads**

Available in 1, 2, 3, and 4 conductor units in voltages of from 2300 to 34,500.

Bushings inverted for full weather protection. Ideal for pole mounting.

## G & W Potheads

Unusually high factors of safety, generous clearances, liberal designs and accurate fit of separate parts are general characteristics of G & W Potheads.

Type T Capnut

**Type T Capnut Style** is a logical choice for general installations—indoors as well as outdoors. The positive seal against entrance of moisture also prevents leakage of compound and cable impregnating oil. Capnut potheads will withstand appreciable internal pressure and will provide the necessary protection to paper insulated cables. Available as standard for all voltages and conductor sizes, single and multiple conductor. Specify Type T for outdoors and Type NT for indoors.

**Type ES** is used wherever the disconnecting feature will add to the convenience of system operation. Inasmuch as all live parts are enclosed in porcelain, indoors or outdoors. This pothead provides hermetically sealed protection to single and multiple conductor cables. Available in three ampere ratings, 100, 250, and 500; and in three voltage ratings, 5,000, 7,500, and 15,000. Gang operated disconnecting potheads are a further convenience for quick isolation of circuits.

Type ES Disconnecting

Type N Straight Through

**Types N, P, and L** are for varnished cambric and rubber insulated cables; these are straight through style potheads and can be used indoors (or outdoors up to 600 volts). The conductors pass through the pothead without splicing and no sealing connectors are used. Hence, this style should not be used on paper insulated cables if there is an appreciable static pressure head, because taped up bushings and asphalt base compound will not seal cable oil under pressure.

Type P Porcelain Lid, 6600 Volts Indoor

Type L, 600 Volts Outdoor

Type C Flexible Band Cable Support

Type T

Type ES

Type A

Type B

### Control Cable Heads

With or without conduit fittings on top end. Bakelite lids are furnished with proper number and size of holes for conductors. Also suitable for motor connections.

### Standard Shapes of Multiple Conductor Potheads

Shape B

Shape C

Shape D

Shape BY

Shape BW

Shape BK

Shape BU

Shape BT

When ordering potheads, specify type of pothead (and whether outdoor or indoor); No. of conductors and size of conductors; voltage rating of pothead (or circuit voltage); shape of pothead, if multiple conductor; cable diameters (also style of base fittings); and whether G & W Novoid compound is wanted.

### Interchangeable Base Fittings

Wiping Sleeve—"WS"

Clamp ring and stuffing box. Invert when used with CC. Symbol—"CR-SB"

Plain stuffing box. Can be drilled on job to cable size. Uses cord packing. Symbol—"SB"

Symbol—"PB" & conduit coupling "CC"

Symbol—"CR-SB" & armor clamp "AC"

Conduit couplings and armor clamps are separate fittings for attachment when required.

Conduit Bell for Closing Top of Conduit and Supporting Cables

Type D Straight Splice Boxes

Type D 3-Way (Tee) Splice Boxes

Information regarding complete line of G & W Specialties furnished on request.

## Three-E Isolators

3-Phase Single Throw, 600 Ampere, 7.5 Kilovolt Isolator

3-Phase Single Throw 400 Ampere, 5 Kilovolt Load Interrupter Isolator

3-Phase Single Throw, 200 Ampere, 5 Kilovolt Cable Isolator

Rear View of Switchboard Equipped with Isolators

Three-E Isolators are essentially disconnect switches with current carrying parts enclosed in insulation. After terminal connections are made and tapped, it is a true safety-first device since it is not possible to come in contact with live parts.

The unique design of the Isolators gives them a compactness which permits of space saving in steel inclosures and bus structures, without sacrificing any proper engineering requirements.

When an Isolator is combined with a pothead body, it forms the Cable Isolator, which is an ideal device for terminating and disconnecting lead covered power cables.

Isolators and Cable Isolators have been further improved by building them with interrupter units, enabling them to open light loads and magnetizing currents.

All types of Isolators are made in voltage ratings of 5, 7.5, and 15 kilovolts, and for ampere ratings 200, 400, 600, 1200, and 2000.

### Three-E Indoor Type Disconnecting Switches

The double blade type of construction is used throughout, giving the advantages of low temperature rise, self-aligning contacts, etc. The clips are cast copper.

Built for voltages from 110 to 34,500 and ampere capacity from 100 to 5,000.

Switches can be supplied in all combinations of front and back connection, of the single throw, double throw, and transfer types with or without blade locks, for flat or pipe mounting on steel, slate, marble, ebony asbestos and alberene stone.

Insulating barriers, blade stops, and terminals can be supplied for all switches.

### Three-E Outdoor Disconnects

Available in single and double throw. Tandem transfer and double blade transfer in upright, vertical and underhung mountings, rating from 400 to 2000 amperes, and 7500 to 69,000 volts.

Equipped with horn type locks and N.E.M.A. standard insulators.

Distribution and Rural Line Disconnects are furnished in standard sizes of 200 to 400 amperes and from 7.5 to 15 K.V.

The 400 and 600 ampere Line Suspension Switches for all spans supplement a very complete and high quality line of Three-E Outdoor Disconnects.

### Three-E Outdoor Fuse Disconnects

Type F.V.H.

Available as expulsion Fuses or arranged for use with S & C liquid fuses.

Furnished in all standard ratings and mountings for stick operation.

Features simplicity and easy fuse replacement.

### Three-E Indoor Fuses and Fuse Mountings

Available in disconnect type as shown or in permanent mounting styles.

Furnished in all standard ratings and mounting—Styles with or without locks.

### No. 8900-L Type Three-E Air Break Switches

A rural line switch for pole top mounting features ease and flexibility of mounting. Arranged for cross arm or steel structure mounting and equipped with forged rings for strain insulators.

Used with Wood or steel shafts and Pivot sleet hoods for easy operation 7500 to 34,500 volts sizes in 3 and 4 pole units.

## No. 8900-U Type Three-E Air Break Switches

Same as No. 8900-L Type except supplied with three insulators per pole. Features simplicity of design, high quality materials, and careful construction. Pivot sleet-hoods, snap-break arcing horns, double clamp terminals furnished as standard equipment.

Available from 7500 to 34,500 volts.

## No. 6600 Type Three-E Sidebreak Switches

Furnished for rural service as pole units or for stations.

Pivot sleethoods standard on station types. Also available in No. 6200 style with three insulators and double break.

Standard ratings from 200 to 1200 amperes, and voltages to 161,000.

## No. 8400 Three-E High Pressure Switches

Features balanced high pressure. Unusually fine design remarkably easy to operate in all weather conditions. Pressure is predetermined and does not vary. Contact surfaces are self-cleaning. Patented limiting sleeve removes 90% of the strain on current carrying parts. A long-life switch for heavy duty service at low maintenance cost. Operated by hand or motor mechanism. Ratings to 161 K.V. standard.

## Type PH Three-E Indoor High Pressure Switches

A simple yet dependable pressure switch for stick operation individually or in gangs. Uses left and right hand threaded stud principle to establish high pressure.

Contacts are self-cleaning.

Furnished in ratings of 1200 to 6000 amperes from 5 to 15 K.V. Also available in outdoor types for stick or gang operation.

## Three-E Hand Control Mechanisms

Reciprocating

Torsional

Hand operating mechanisms for remote control of switches are available in rotating or reciprocating types and furnished with locking pins. These handles are very flexible in design and can be used to advantage wherever remote control is desired.

## Three-E Motor Control Mechanisms

Automatic motor control of either torsional or reciprocating action for correct operation of all Three-E gang operated switches is available in the OM-100 motor mechanism.

Equipped with auxiliary hand operating handle and completely sealed against dust and moisture. Internal heating unit keeps inside parts dry and always in condition for instantaneous operation.

## Three-E Complete Substations

More than thirty years of designing and building substations of all sizes and types, both indoor and outdoor, have equipped Three-E engineers to give you the utmost in modern, correct substations that will prove to be economical and require a minimum in the way of maintenance costs.

Three-E engineers are always available to help you with your designing, building, or operation problems.

## Three-E Outdoor Bus Supports

Type BFU

Type AFU

Type HFU

Type BPU

Type APU

Type MPU

Type HPU

Type FPU

Type MFU

Type RFU

Type FFU

The Three-E line of Outdoor Bus Supports is complete in every respect. It includes upright and underhung types for carrying flat bars in vertical or horizontal positions or round conductors. Fittings are available for pipe mounting. Adjustable adaptors can be supplied to permit 90° adjustment on bus clamps. Three-E Bus Supports use outdoor insulating units which meet N.E.M.A. Standards for dimensions and performance, supplied in all ratings to 69,000 volts.

## Three-E Form A-1 Indoor Bus Supports

### For Flat Vertical Bus Bar

Type HF

Type HP

All bus supports illustrated are the Form A-1. Heavy pressed steel mounting bases are used on this form of bus support.

These supports are available for voltages from 5000 to 34,500 and the cantilever strength at insulator cap. of 6000 inch pounds.

Indoor bus supports are also furnished in what is known as Form A. This form uses heavy cast malleable bases.

**Three-E Clamp Insulator Supports**

**Type CIL**  
Pipe Mounting

**Type CIL**  
Flat Mounting

**Type MIL**  
Flat Mounting

Consists of porcelain spools held by metal clamps. The lower half is made of heavy pressed steel and the top half of heavy pressed non-ferrous metal. Also available with a heavy cast malleable base instead of pressed steel.

Can be used on either a.c. or d.c. service. Available for conductor sizes ranging from  $\frac{3}{16}$  to  $3\frac{1}{2}$  inches.

**Three-E Bus Clamps****Heavy Duty**

Available for all sizes of bus bars used commercially. The extra heavy duty type is recommended where a large number of bars is used to carry currents of high amperage.

**Type AD**

**Type HD**

**Medium Duty**

For average conditions in central station and industrial plant work. Both heavy and medium duty clamps are available for a.c. or d.c. service. Type of service should be specified when ordering.

**Type AM**

**Type HM**

**Three-E Electrical Copper Fittings**

For Wire, Cable, Rod, Tubing and Bar

Only a very small portion of the Three-E line of copper fittings is shown in the above illustration. Clamp and solder types are available to meet practically every requirement in connecting wires, cables, rods, tubing and bars.

Only the best grade of electrolytic copper is used in Three-E connectors and careful machining is a major feature.

**Three-E Iron Pipe Fittings**

The above illustrations show but a small portion of the Three-E line of pipe fittings. Fittings can be supplied for the commercial pipe sizes in all manner of shapes to meet most any condition.

## POLES

WESTERN RED • NORTHERN WHITE  
DOUGLAS FIR

The National Pole & Treating Co., Division of Minnesota and Ontario Paper Company, supplier of Graybar poles for more than twenty-five years, has a well earned reputation for furnishing a quality product.

It maintains, at the treating plants, both a graduate chemist and a graduate timber pathologist, who are charged with treating operations, oil analyses, yard sanitation and research—all important essentials in the manufacture of quality poles.

It also maintains, at its concentrating yards, trained workmen, who, for a small extra charge, roof, gain and stain poles to specifications.

GRAYBAR ELECTRIC COMPANY OFFICE AND WAREHOUSE

## International Creosoted Pine Poles

Old Lines of International Creosoted Pine Poles  
In Above Lines—6712 Poles— $\frac{1}{2}$  of 1 Per Cent Replaced in 25 Years of Service

## General

Graybar Electric Company brings to the utility trade the highest quality in creosoted pine poles and offers for support of this statement the fact that its supplier has more long-time service records of poles without failures than any creosoting concern. Low annual cost, reliability, the fact that in times of financial stress or weather hazard the utility company *needs lines that will stand without failure*, all of these have dominated us in our creosoted pine pole policy.

## International As A Supplier

Our supplier, International Creosoting and Construction Company, organized in 1875 and one of the largest commercial creosoting concerns in the business, has an outstanding record and a dominant place in the treating industry. We call special attention to the records of old and new lines cited in this concern's photographs here shown. They are typical, and a few of the many available.

Operating in one of the finest timber-producing areas in the South-West, International has added to its advantages of location and natural resources the skill of graduate chemical engineers and treating operators whose work is conducted in modern plants and well equipped laboratories. Pioneered and trained by a background of 72 years of experience, International timbermen select the cream of the timber area (surpassing even the quality of the lumber logging operations) for the manufacture of Graybar-International poles. This production moves to conditioning yards at the treating plants by means of a highly developed and well organized concentrating system. The yards themselves have been built in conformity with Government seasonal recommendations.

Always advocating pure coal tar creosote and the best grade only in the treatment of its poles, and standing against every tendency towards departures in quality or reduction in quantity of the preservative that would make of the user's line an experimental laboratory, Graybar-International creosoted pine poles have gone to almost every state of the Union and without exception have given outstanding service.

## Reasons For The Standing Of The International Pine Pole

- |                    |                     |
|--------------------|---------------------|
| 1—Long Life        | 5—Cleanliness       |
| 2—Low Annual Cost  | 6—Fire Resistant    |
| 3—Great Strength   | 7—Bird Resistant    |
| 4—Lasting Strength | 8—Termite Resistant |

The utilities of the United States use more creosoted pine than all other treated poles put together. Only briefly need their qualifications be given to account for this preference. The tall straight pine trees of the South are natural poles. They grow with a gradually tapering stem, practically without branches, and when sheared of their bark and browned as the result of treatment, they present a stately appearance in the line. Their wood is the strongest of the poles commonly used in line construction. Fortunately pine is a wood into which creosote goes very deeply during the course of scientifically controlled and proper treating operation, and the depth of this protection is the reason for the exceedingly long life of the pine pole. It is the explanation also of pine's resistance to termite attacks, for the checks which open in

every wood and expose it to the ravages of these insects do not go past the deep creosote penetration in the pine pole. Modern methods and advances in the science of wood preservation now makes available the creosoted pine pole so well manufactured in appearance, and with surface so clean that they are in use on the streets of New York, Detroit, Los Angeles, St. Louis, Baltimore, Boston, San Francisco, and thousands of other cities.

American Standards Association  
Specifications for Southern Pine Poles

Approved June 20, 1931

## Introduction

These specifications cover southern pine poles which are to be given a preservative treatment. The poles are to be classified in accordance with the American Standard Dimensions of Creosoted Southern Pine Poles (05e2-1931), which is a part of these specifications.

The length and class of poles wanted and full details of the framing desired shall be stated in the orders.

The details of any marking, including length and class marks, to be placed on the poles shall be in accordance with instructions from the purchaser.

Complete detailed instructions shall be given the supplier in all cases where modifications are to be made in these specifications to meet special requirements.

## 1.—Material Requirements

## 1.1—Species

All poles shall be cut from live southern pine timber: Longleaf Pine (*Pinus palustris*), Shortleaf pine (*Pinus echinata*), Loblolly Pine (*Pinus taeda*), Slash Pine (*Pinus caribaea*), and Pond Pine (*Pinus rigida serotina*).

## 1.2—Prohibited Defects

All poles shall be free from decay, red heart, cracks, plugged holes, and bird holes. Nails, spikes, and other metal shall not be present in the poles unless specifically authorized by the purchaser.

## 1.3—Permitted Defects

1.31 BLUE SAP STAIN.—Blue sap stain that is not accompanied by softening or other disintegration of the wood (decay) is permitted under these specifications.

1.32 HOLLOW PITH CENTERS.—Hollow pith centers in the tops or butts of poles and in knots are permitted.

## 1.4—Limited Defects

1.41 CHECKS.—The top and side surfaces of poles shall be free from injurious checks.

1.42 SHAKES.—Shakes in the butt surface extending over not more than one-quarter ( $\frac{1}{4}$ ) of the circumference are permitted provided they are at least one (1) inch distant from the edge of the butt. Shakes extending over more than one-quarter ( $\frac{1}{4}$ ) of the circumference are permitted when they are inside of a circle whose center corresponds to the center of the butt surface and whose diameter equals one-half ( $\frac{1}{2}$ ) of the average butt diameter.

## International Creosoted Pine Poles

New Lines of International Creosoted Pine Poles  
In Above Lines—4026 Poles—No Replacements in 18 Years of Service

## Specifications for Southern Pine Poles

Continued

Shakes in the top surface whose width does not exceed one-sixteenth ( $\frac{1}{16}$ ) of an inch are permitted provided they do not extend over more than one-half ( $\frac{1}{2}$ ) of the top circumference.

**1.43 SPLITS.**—Splits are prohibited in the top surfaces of poles. Splits in butt surfaces are permitted provided that their height from the butt along the side surfaces does not exceed two (2) feet.

**1.44 GRAIN.**—No pole shall have more than one (1) complete twist of grain in any twenty (20) feet of length.

**1.45 INSECT DAMAGE.**—Insect damage consisting of holes less than one sixteenth ( $\frac{1}{16}$ ) of an inch in diameter is permitted.

**1.46 KNOTS.**—The diameter of any single knot or knot cavity, or the sum of the diameters of all knots and knot cavities in any one (1) foot section shall not exceed the limits set up in the following table. Knots and knot cavities one-half ( $\frac{1}{2}$ ) of an inch or under in diameter shall be ignored in applying the limitations for sum of diameters.

Limitations of Knot Size

Length of Pole	MAXIMUM SIZES PERMITTED, INCHES		
	DIAMETER OF ANY SINGLE KNOT OR KNOT CAVITY	Sum of Diameters of All Knots and Knot Cavities in Any 1 Foot Section	
	Classes 1-3	Classes 4-10	All Classes
45 Ft. and Under	4	3	8
50 Ft. and Over	5	5	10

Knots one (1) inch or over in diameter, showing discoloration or softness of fibre, indicating possible decay, shall be neatly gouged to a depth of not more than one-fifth ( $\frac{1}{5}$ ) of the diameter of the pole at the point where the knot is located, to permit determination of the character and extent of decay. The gouging shall be done without unnecessary removal of sound wood, and in such a manner as to insure drainage of water from the hole when the pole is set. Where such gouging does not completely remove the decay (heart rot), the pole shall be rejected.

Knots under one (1) inch in diameter need not be gouged unless after trimming the presence of decay is revealed and upon further examination the decay is found to extend to a depth of more than two (2) inches.

When more than one (1) cavity is present in a pole, the sum of the depths of all cavities in the same six (6) inch longitudinal section of the pole shall not exceed one-third ( $\frac{1}{3}$ ) of the mean diameter of that section.

**1.47 SCARS.**—No pole shall have a turpentine face or other scar located within two (2) feet of the ground line.

In other sections of the pole, scars which have been smoothly trimmed so as to remove all bark and all surrounding or overhanging wood that is not completely intergrown with the wood of the body of the pole are permitted, provided

(a) that such trimming does not result in abrupt changes in the contour of the pole surface and that trimmed scar does not have a depth of more than one (1) inch, except that where the diameter of the pole at the location of the scar is more than ten (10) inches the depth may be one-tenth ( $\frac{1}{10}$ ) of the diameter; and

(b) that the circumference of the pole at any point on trimmed surfaces located between the butt and a point two (2) feet below the ground line is not less than the circumference of the pole at the ground line.

**1.48 SHAPE.**—Poles shall be free from short crooks.

A pole may have sweep subject to the following limitations:

(a) Where sweep is in one (1) plane and one (1) direction only, a straight line joining the surface of the pole at the ground line and the edge of the pole at the top shall not be distant from the surface of the pole at any point by an amount greater than one (1) inch for each six (6) feet of length between these points.

(b) Where sweep is in two (2) planes (double sweep) or in two (2) directions in one (1) plane (reverse sweep), a straight line connecting the mid-point at the ground line with the mid-point at the top shall not at any intermediate point pass through the external surface of the pole.

## 2.—Dimensions

## 2.1—Length

Poles under fifty (50) feet in length shall not be over three (3) inches shorter or six (6) inches longer than nominal length. Poles fifty (50) feet or over in length shall not be over six (6) inches shorter or twelve (12) inches longer than nominal length.

Length shall be measured between the extreme ends of the pole.

## 2.2—Circumference

Poles shall be classified in accordance with the American Standard Dimensions of Creosoted Southern Pine Poles. Minimum allowable circumferences at six (6) feet from the butt (except for Classes 8, 9, and 10), and at the top, for each length and class of pole listed, are shown in this standard. Poles having circumferences which are greater, at the same points of measurement, than those shown for the length and class desired, shall be acceptable, provided that the six (6) foot from butt circumference is less than the minimum given for the second larger class pole of the same length. The top dimensional requirement shall apply at a point corresponding to the minimum length permitted for the pole.

\*No butt requirement on Classes 8, 9 and 10.

## 3.—Manufacturing Requirements

### 3.1—Bark Removal

Outer bark shall be completely removed from all poles.  
No patch of inner bark left on the pole surface shall be more than one quarter (¼) of an inch in width or more than four (4) inches long.

### 3.2—Sawing

All poles shall be neatly sawed at the butt along a plane which shall not be out of square with the axis of the pole by more than two (2) inches per foot of diameter of the sawed surface. Beveling at the edge of the sawed butt surface not more than one-twelfth (1/12) of the butt diameter in width, or an equivalent area unsymmetrically located, is permitted.

### 3.3—Trimming

Branch stubs, partially overgrown knots, and completely overgrown knots rising more than one (1) inch above the pole surface shall be trimmed close. Completely overgrown knots less than one (1) inch high need not be trimmed.

### 3.4—Framing

All poles shall be framed in accordance with the terms of the order before they are subjected to the preservative treatment.

Gains on poles showing sweep or curvature shall be located on the concave side in the plane of the greatest curvature.

All gains on the same pole shall be cut so that their flat surfaces are approximately parallel. Conformance to this requirement may be tested by placing straight edges thirty (30) inches long on the faces of the finished gains so that the ends of the straight edges extend fifteen (15) inches on either side of the center line of the pole. The straight edges in any two (2) gains, when sighted in the direction of the longitudinal axis of the pole, shall not be out of parallel at their ends by more than one-sixteenth (1/16) of an inch. Bolt holes shall be bored perpendicular to the faces of the gains.

## 4.—Storage and Handling

### 4.1—Storage

When it is necessary for any reason to hold in storage poles offered under these specifications, they shall be stacked on creosoted or non-decaying skids of such dimensions and so arranged as to support the poles without producing noticeable distortion of any of them. Poles shall be piled in such a manner as to permit free circulation of air and they shall be supported at all points at least one (1) foot above the general ground level, or any vegetation growing thereon. No decayed or decaying wood shall be permitted to remain underneath stored poles.

### 4.2—Handling

Pole tongs, cant hooks, and other pointed tools capable of producing indentations of more than one (1) inch in depth shall not be used on poles furnished under these specifications.

## 5.—Definitions of Terms

The following definitions shall apply in these specifications:

### 5.1—Fungous Defects

5.11 BLUE SAP STAIN.—Blue sap stain is a bluish coloration in the sapwood, caused by the action of certain molds and fungi, that is not accompanied by softening or other disintegration of the wood.

5.12 DECAY.—Decay is disintegration of wood substance due to the action of wood-destroying fungi. Rot and Dote mean the same as Decay.

5.13 RED HEART.—Red heart is the incipient stage of a destructive heart rot caused by *Trametes pini* that occurs in the living tree. It is characterized by a reddish or brownish color in the heartwood.

### 5.2—Insect Defects

5.21 INSECT DAMAGE.—Insect damage is the result of boring in the pole by insects or their larvae. Scoring or channeling of the pole surface is not classed as insect damage.

### 5.3—Timber Defects

5.31 CHECKS.—Checks are lengthwise separations of the wood in a generally radial direction.

Heart checks are checks which extend from the pith center of the pole toward but not to the periphery of the pole.

5.32 CRACKS.—Cracks are breaks or fractures across the grain of the wood.

5.33 SCARS.—Scars or cat faces are depressions in the surface of the pole, generally elliptical in shape, resulting from wounds where healing has not re-established the normal cross section of the pole.

5.34 SHAKES.—Shakes are separations of the wood, generally parallel with the annual rings.

5.35 SPLITS.—Splits are separations between the fibers of the wood extending from surface to surface through the pole.

### 5.4—Shape

5.41 SHORT CROOK.—A short crook is a localized deviation from straightness which, within any section of five (5) feet or less in length, is more than one-half (½) the mean diameter of the crooked section. (See Diagram 3 of the subsidiary drawing entitled "Measurement of Sweep and Short Crook in Poles.")

5.42 SWEEP.—Sweep is the deviation of a pole from straightness. (See diagrams 1 and 2 of the subsidiary drawing entitled "Measurement of Sweep and Short Crook in poles.")

### 5.5—Miscellaneous

5.51 KNOT DIAMETER.—The diameter of a knot is its diameter on the surface of the pole measured in a direction at right angles to the lengthwise axis of the pole.

5.52 LIVE TIMBER.—Live timber is that cut from a tree which was standing and living at the time of cutting.

## 6.—Subsidiary Drawing

The following drawing is subsidiary to the text of these specifications:

Measurement of Sweep and Short Crook in Poles.

## 7.—Subsidiary Standard

The foregoing dimension table is subsidiary to the text of these specifications: It is designated as:

American Standard Dimensions of Creosoted Southern Pine Poles (05e2-1931).

### International Creosoted Pine Poles

#### Measurement of Sweep and Short Crook in Poles

Diagram 1—Measurement of Sweep in One Plane and One Direction

Diagram 2—Measurement of Sweep in 2 Planes (Double Sweep) or in 2 Directions in One Plane (Reverse Sweep)

NOTE: Diagram No. 2 applies to the measurement of double sweep in Western Red Cedar and Southern Pine

Poles. For measurement of double sweep in Northern White Cedar and Chestnut Poles, see text.

Diagram 3—Measurement of Short Crook (Three Cases Shown)

Case 1—Where the Reference Axes are Approximately Parallel

Case 2—Where Axes of Sections above and below the Crook Coincide or are Practically Coincident

Case 3—Where Axis of Section above Short Crook is not Parallel or Coincident with Axis below the Crook

NOTE: The three cases shown under Diagram 3 are typical and are intended to establish the principle of meas-

uring short crooks. There may be other cases not exactly like those illustrated.

International Pine Poles have the Straightness and Symmetry of a Machined Product

## International Creosoted Pine Poles

Stacks Such as Here Shown on One of International's Conditioning Yards Make Possible Our Quick Shipment of Quality Creosoted Pine Poles

## Top Dimension Poles

Top dimension poles conform in all respects to American Standards Association Specification poles, with the sole difference that top diameter poles specify minimum top diameter only; whereas A. S. A. Specification poles specify both minimum top circumference and circumference six feet from the butt.

Length Feet	TOP DIAMETER IN INCHES*						
16	4-5	5-6	6-7	...	...	...	...

6	5-6	6-7	7-8	8-9	9-10	10-11	11-12	12-13
7	5-6	6-7	7-8	8-9	9-10	10-11	11-12	12-13
8	5-6	6-7	7-8	8-9	9-10	10-11	11-12	12-13
9	5-6	6-7	7-8	8-9	9-10	10-11	11-12	12-13
10	5-6	6-7	7-8	8-9	9-10	10-11	11-12	12-13
11	5-6	6-7	7-8	8-9	9-10	10-11	11-12	12-13
12	5-6	6-7	7-8	8-9	9-10	10-11	11-12	12-13
13	5-6	6-7	7-8	8-9	9-10	10-11	11-12	12-13
14	5-6	6-7	7-8	8-9	9-10	10-11	11-12	12-13
15	5-6	6-7	7-8	8-9	9-10	10-11	11-12	12-13

\*Note: Top diameter is determined by placing a tape around the circumference of the pole at the base of the roof.

## What an Order Should Show

To avoid delays and prevent the possibility of error, an inquiry or an order for International poles should contain the following information:

- 1.—Name of consignee.
- 2.—Destination of shipment.
- 3.—Date shipment is desired.
- 4.—Number of poles required.
- 5.—Length and minimum top diameter.
- 6.—Number of pounds of creosote required per cubic foot of wood.
- 7.—Type of framing desired. A blue print or sketch is preferable. Poles can be framed more economically at a treating plant than in the field at point of installation. Insofar as possible therefore complete framing instructions are desirable.

## \*Specification for the Preservative Treatment of Southern Yellow Pine Poles

## Rueping Empty Cell Process

\*Note: A descriptive specification only. It must be recognized that specifications do not guarantee quality, and should not be regarded as adequate protection to the buyer. In any treated wood, the all important factor is the source of supply.

## General

The following specification is intended to obtain an empty cell treatment for the poles; and if the material to be treated is in a different condition as to moisture and seasoning, material for each retort charge shall be selected as to condition of moisture so that there will be no great difference in degree of seasoning in any one charge. Only perfectly sound poles shall be treated. The treating plant shall be equipped with indicating and recording gauges and other necessary apparatus for accurately observing and recording the treating process. Above the level of the creosoting cylinder there shall be an overhead drum for the purpose of determining that the cylinder is full of preservative and free from air and the gauge reading indicating a full cylinder shall not be taken until the preservative is seen to overflow through the valve on top of this drum; there shall also be a sap drum below the level of the cylinder by means of which sap and condensation shall be removed regularly. The treating plant must have all the necessary chemicals, a laboratory and laboratory apparatus to enable the quality of preservative to be determined.

## Seasoning

## Air-Seasoning

In air-seasoning, the poles shall be stacked in such a manner as to provide free air circulation and minimum contact between individual pieces in each stack. These stacks shall be placed on treated or otherwise permanent skids at least six inches above the ground on a well drained storage yard free from vegetation and decaying wood, so located that prevailing winds strike it freely, and each layer shall be separated by creosoted strips. Alleys between the stacks shall be wide, continuous and straight. The material shall remain until in the judgment of the inspector it is sufficiently seasoned to obtain the maximum benefit from the treatment.

## Seasoning By Steam

When time for air-seasoning is not available, steam seasoning shall be used. Live, saturated steam shall be admitted to the treating cylinder taking care that all air is swept from the cylinder before the outlet valve is closed. Pressure shall then be raised gradually to the maximum temperature desired, this maximum being determined by the treating inspector. It should not be less than 254° F., not more than 259° F. The duration of the steaming process is dependent upon the degree of seasoning of the poles in the cylinder charge but shall in no case be carried to such an extent as to injure the timber.

## Initial Vacuum

After the steaming process has been completed the steam shall be blown off and the treating cylinder exhausted as quickly as possible to as high a vacuum as possible, which must be at least twenty-four inches at sea level or proportionately less at higher altitudes. This vacuum shall be maintained for at least one hour or for whatever longer period is necessary, so that the wood may be as dry and free from air as practicable. During the exhaustion process the temperature within the treating cylinder shall be maintained by means of steam under pressure in the closed coils. The cylinder shall be relieved of sap and condensation continuously.

## International Creosoted Pine Poles

## Specification for the Preservative Treatment of Southern Yellow Pine Poles

## Seasoning—Continued

## Initial Air Pressure

In the case of air-seasoned poles, Initial Air Pressure is the first step in the treating process. With steam-seasoned poles this step immediately follows the Initial Vacuum.

The poles shall be subjected to air pressure of sufficient intensity and duration (usually 40 lbs. to 100 lbs.) to provide under a quick high vacuum the ejection of surplus preservative, and to insure a retention and proper distribution of the stipulated number of pounds of preservative per cubic foot of wood.

## Treatment

The creosote shall be introduced between 170° F. and 210° F., the cylinder pressure being maintained constant until the cylinder is filled. The oil must be seen by the inspector to flow from the overhead drum on top of the treating cylinder, thus assuring him that the cylinder is completely filled with the preservative. The pressure shall then be gradually raised to and maintained at a minimum of 150 lbs. per square inch until there is obtained the largest gross absorption that can be reduced to the stipulated final retention, calculation being based on readings of the working tank gauges and the weight of the creosote at 100° F. The quantity of oil for final retention shall be based on the cubic content of wood in the treating cylinder as determined by actual measurement of the top and butt of each pole in each charge. Under no conditions may shortage of oil in one charge be offset by overage in another; the minimum final retention in each case must be 100 per cent of the quantity of creosote specified.

## Final Vacuum

After pressure is completed and the cylinder is emptied of oil a sufficient vacuum shall be promptly created and maintained until the timber can be removed from the cylinder free from dripping oil.

## Penetration

The treating processes shall be directed toward complete sapwood penetration with the preservative.

## Preservative

For preservative see Creosote Specification.

Note: A final retention of 8, 10 or 12 pounds of creosote per cubic foot are most frequently used. Of these, the 8-pound treatment is specified in the great majority of cases.

Standard Specifications for Creosote Oil  
American Wood Preservers Association

## Grade 1

- 1.—The oil shall be a distillate of coal-gas tar or coke-oven tar.<sup>1</sup> It shall comply with the following requirements:
- 2.—It shall not contain more than three per cent of water.
- 3.—It shall not contain more than 0.5 per cent of matter insoluble in benzol.<sup>2</sup>
- 4.—The specific gravity of the oil at 38° C., compared with water at 15.5° C., shall be not less than 1.03.
- 5.—The distillate, based on water-free oil, shall be within the following limits:
  - Up to 210° C., not more than 5 per cent.
  - Up to 235° C., not more than 25 per cent.
- 6.—The residue above 355° C., if it exceeds 5 per cent shall have a float test of not more than 50 seconds at 70° C.
- 7.—The oil shall yield not more than 2 per cent of coke residue.
- 8.—The foregoing tests shall be made in accordance with the standard methods of the American Wood-Preservers' Association. (See Manual—Creosote, Analysis.)

<sup>1</sup>Owing to the complexity of the chemical composition and physical properties of coal-tar creosote oil, and to the fact that some of the same compounds and properties which characterize coal-tar creosote are found in certain petroleum derivatives, the determination of the purity of creosote is difficult. When there is not certain assurance that the oil is a pure product, the following tests will aid in arriving at an opinion as to its coal-tar origin:

A.—Fraction distilling between 210° and 235° C. is usually solid or contains some solids when cooled to 25° C.

B.—All of the fractions up to 315° C. contain tar acids in varying amounts, usually at least 1 per cent calculated on the amount of the fraction tested. (See Manual—Creosote, Analysis, Tar Acids.)

C.—The specific gravity of the fraction between 235° and 315° C. is usually not lower than 1.025 and specific gravity of the fraction between 315° and 355° C. is usually not lower than 1.085 at 38° C. compared with water at 15.5° C. However, some pure coal-tar distillates fall slightly below these limits.

If the oil does not comply with at least one of the foregoing tests it is undoubtedly not a pure coal-tar creosote.

<sup>2</sup>Samples of oil taken from working tanks may show an increase in matter insoluble in benzol due to treating operations. Such increases provided they do not exceed by 1 per cent the specification limits should not serve to cause rejection of the oil for non-conformity with specifications if it can be shown that the original fresh oil was of specified quality.

## Depth of Creosote Penetration

Increment Borer

The increment borer shown here is used for extracting sections of wood from poles to determine how deeply the preservative has penetrated into the wood.

The use of this instrument is recommended as one means by which the buyer can gauge the quality of the product he receives. It does not damage the pole and the only precaution is that a creosoted wood plug be driven into the hole after the boring has been extracted.

For adequate protection it is essential that creosote penetrates wood deeply (see discussion on penetration later in this section).

Prices for increment borers, on request.

## Machine Trimming

All International poles are now being machine trimmed for their entire length. The machines are the most modern type that has been developed, and the depth of cut is uniform from top to butt. Only a light shaving is made to remove the knots and other protuberances. The grading into classes is done after the trimming.

Machine trimming has many advantages. The freshly trimmed surface facilitates seasoning. Unnecessary cutting into the body of the pole by hand trimming and gouging is eliminated. The appearance of the pole is greatly improved and bleeding is further reduced.

Characteristics of Quality Pine Poles

Status of Pine Poles

During a period covering the last several years, more treated pine poles have been used than all other treated poles put together. The utility that uses this commodity therefore is using the most generally accepted pole of the utility field. Important lines that must stand up under greatest stress and for the longest period of time are well built when built with quality-creosoted pine poles. Every sleet storm brings a further degree of proof of this fact. Bearing in mind the salvage value even of an abandoned line of creosoted pine poles, the costliness of individual pole failures, and creosoted pine's comparatively low annual cost, it seems difficult to think of any line not sufficiently important to justify their use.

Life of Creosoted Pine Poles

Whole lines of creosoted pine poles furnished by our supplier 25 and 30 years ago are still in use with practically no replacements, and are obviously good for many years to come. Many estimates have been made of the life to expect, and the Pennsylvania Electric Association, as the result of a study, estimated 35 years. This figure seems conservative with so many International creosoted pine lines now approaching that age and still in good condition. The

oldest lines still standing, and differences in climatic conditions, make it impossible to forecast definitely just what life to expect from the creosoted pine pole.

Section of the Chemistry Laboratory  
Scientific Control Is Essential

## International Creosoted Pine Poles Characteristics of Quality Pine Poles

Continued

### Value of Penetration

Uniform Penetration  
Is a Criterion of Good  
Treatment

Deep Penetration  
Means Long Life  
For the Poles

While several factors are important, and particularly the grade of preservative is important, no single factor has such bearing on the life and the quality of creosoted pine poles as the depth of creosote penetration and the uniformity of creosote penetration. Untreated wood of any kind commonly used for poles will decay eventually, and the only preventive is to have the penetration of the preservative deep and uniform and of proper grade. This is accomplished only when skilled technicians analyze the creosote and apply the treating process.

### Strength

The standard for ultimate fiber stresses for the commonly used pole woods has been developed by the Sectional Committee on Wood Poles under the sponsorship of the Telephone Group, American Standards Association. These ultimate fiber stresses quoted verbatim are tabulated below.

Northern White Cedar.....	3600 lbs. per sq. in.
Western Red Cedar.....	5600 lbs. per sq. in.
Chestnut.....	6000 lbs. per sq. in.
Southern Yellow Pine (Creosoted)....	7400 lbs. per sq. in.

### Fire Resistance

Fires that rage across the dry cane fields of Cuba crack insulators, melt steel, and burn untreated wood to ashes, but creosoted pine poles stand the flames. Such is the actual experience. Along almost every railroad right-of-way fire gangs burn the weeds each fall and it is a matter of common record that while untreated posts burn completely, creosoted pine poles are undamaged. Under these severe conditions the creosoted pine pole may take fire and smolder and smoke for a while, but finally the fire smothers itself out, leaving a practically undamaged pole. The action is analogous to a burning oil lamp wherein the wick though it forms the support for the flame is itself consumed very slowly.

### Appearance and Cleanliness

Early in the history of the development of creosoted pine poles some question was raised as to their use on city streets. It was feared that the bleeding of some of the poles might cause trouble if the clothing of pedestrians rubbed against them. No longer are these objections heard either in protest or propaganda. International's care in timber selection, the skill of its production and manufacturing forces, and advances in the science of timber treatment all have contributed to relegate these objections to the background and to give to the business district and the residential street the security and economy of the creosoted pine pole. Graybar-International poles are in use in the business and residential districts of the largest cities of the United States, and in thousands of the smaller ones. The present-day pole is a clean pole. It is smooth and shapely and stands with the appearance of tapered wrought-iron pipe, rather than that of processed trees.

### Termites

Termites are attracting more and more attention because of their attacks on poles. Formerly termites lived in the forests, but as the forests become depleted they seek shelter elsewhere and find their way into untreated structural wood. Untreated pole lines have been accused of acting as termite highways by means of which they could fly from pole to pole and then to residence; infesting new areas. It is a fact that termites have now been found in all but three states of the United States.

Creosoted pine poles are practically immune to termite attack. Even though checks in the wood may form, they do not go deep enough to expose untreated interior wood that would afford shelter for these insects.

### Improved Roof

The illustration shows a new type of pole roof that many of the utility companies are standardizing upon. It is a one-way roof, cut at an angle of 15°. It is to be recommended. The advantages of this roof are:

#### 1. Reduces Checking

A roof cut in this manner leaves a minimum of wood along the center line, the natural cleavage point of the pole. This invites checking. The one-way roof eliminates this disadvantage.

#### 2. Provides Better Drainage

As the roof of a pole weathers, the springwood rings of any species being softer than the summerwood, weather faster, causing the summerwood to stand out in ridges. On the two-way roof these ridges form retaining cups for rain water while on the one-way roof they drain.

#### 3. Conserves the Preservative

Evaporation is a surface phenomenon. There is less surface on a one-way than on a two-way roof.

### Marked Poles

Above is the mark by which Graybar-International poles are identified wherever found. This appears as a date-brand on the side ten feet from the butt of the pole; and is supplemented by an identifying brand on the top and the butt of each pole. These marks are conclusive evidence of our confidence in the quality of the product and the desire to be permanently identified with it.

Beware of unmarked poles. If in a few years they begin to fail, the experience is that it is impossible to tie them definitely to the source of supply. On the other hand when a company consistently uses high grade materials and good preservative treatment which result in long-time dependable service, the company willingly and permanently attaches its name to the product.

## UNION MONOTUBE POLES

For Transmission and  
Distribution Service

**M**ONOTUBE steel poles are the product of a manufacturer who has specialized in steel pole design and construction for over forty years.

Monotube steel poles are designed to be used for the same purpose as wood, structural steel, or sectional tubular poles.

Made of high grade, open hearth steel, their tensile strength and elastic limit are increased still further by the exclusive Union Metal cold rolling process. The result is a stronger, longer lived, and more rugged steel pole than produced by any other process.

In the manufacture of Monotube steel poles, variable strength requirements are met by increasing the diameter of the pole or utilizing heavier steel plate. Available in 11 gage, 7 gage, 3 gage, and 0 gage steel with ground line diameters ranging from 6 to 14 inches.

Monotubes are available in two designs, plain round or fluted. Both types are generally preferred equipped with a steel anchor base which is bolted directly to the concrete foundation; the plain round type, however, can also be furnished for embedment directly into the concrete.

Because of its continuous taper and one-piece construction, a pole of uniform quality and improved appearance results. Furthermore, the extraordinary strength of the Monotube eliminates the need for several sets of poles. There are many installations which successfully combine such services as power and light circuits, street lighting, trolley span wire suspension, fire and police alarm circuits, and other municipal services—thus eliminating the necessity for several sets of poles.

### *Monotube Advantages*

Economy of Installation and Maintenance

Great Strength with Light Weight

One-Piece Tapered Construction

Attractive Appearance

Flexibility

Complete information, prices and delivery on Union Metal Poles is available from your nearby Graybar office and warehouse.

## Union Monotube Steel Floodlighting Poles

### For Nighttime Sports

Meets the demand for tall floodlighting poles to provide adequate lighting, combined with a pleasing appearance, for all night sports.

A standardized line, streamlined in appearance and engineered to provide maximum strength and durability, that will withstand a 100-mile an hour wind when mounting the maximum number of floodlights indicated in the head arrangement selected.

Poles can be completely wired, and the lights mounted and positioned on the ground before erection.

Made of cold rolled steel in nominal heights of 40, 60, 80, and 100 feet. This standardization of heights results in lower cost, permits stock to be carried, and makes prompt shipment of poles possible. These advantages would be lost if the poles had to be tailor made for each installation.

Does not require guying. Anchored to concrete foundations.

Designed for underground wiring service.

Furnished with supports for mounting service platform, transformers, primary cutouts, and distribution boxes together with all necessary wire and cable inlets and outlets, handhole, etc.

The mounting frames are provided with slotted holes for bolting floodlights in position, and the pole comes complete with climbing steps.

Other features are an all welded safety service platform, etc., for the convenience of the owner, contractor, and service men.

Available in the following light groups: 2 lights; 4 to 8 lights; 10 to 12 lights; 14 to 16 lights; and 18 to 24 lights.

Pole and equipment are given one coat of rust resisting paint inside and out before shipment.

The 40 and 60-foot poles are shipped in one piece and the 80 and 100-foot poles are shipped in two sections. Upper and lower sections are shop fitted before shipment and are properly marked for field identification. The taper assures a tight field joint when the two sections are forced together. No welding is necessary.

For additional information write for catalog.

## Rainier Crossarms

RAINIER

The indispensable characteristics in a crossarm are strength and durability. Strength to carry the dead load of conductor, sleet and wind, and to withstand shock within any combination of these two duties that may be imposed upon the arm in service. Durability is just as necessary as strength because the arm is intended for many years of service and the cost to replace an arm in the line is many times the price of the arm itself.

Lightness in weight is also important. The lighter arms are less costly to transport and install and of course they place a lesser burden on the pole structures.

Rainier fir crossarms meet all of these requirements. They are carefully graded with the strength reducing defects eliminated. They are seasoned to approximately equilibrium moisture content which adds further to the strength. They are seasoned slowly and under such control that from the start to the finish of the seasoning process, the moisture content of the interior is substantially the same as at the surface of the arm. Even microscopic as well as visible checking is held to a minimum, so that the finished arm is sound and solid. It will not readily soak up moisture nor admit decay fungi to the interior of the arm.

The largest factory is at Chehalis, Washington, where the finest dry kilns and kiln control equipment are located. The dry kiln operations are supervised by men who are specialists and experts in the drying of crossarm sizes of Douglas fir. Carload orders can be shipped economically from Chehalis to all parts of the United States.

Minimum Carload Weight—Fir from Pacific Coast Mills, 44,000 pounds. Small cars are scarce and weight of at least

50,000 pounds should be figured on. Cars to contain as high as 90,000 pounds can be had.

For the benefit of customers who desire LCL quantities of crossarms, particularly with drillings of non-standard sizes or specially spaced, and to provide immediate delivery of any quantities in emergencies, factories are maintained at Chicago, Illinois; Kansas City, Missouri; Newark, New Jersey; and Texarkana, Texas. These factories are fully provided with manufacturing equipment and are heavily stocked with crossarm lumber which permits prompt attention to the needs of users in all parts of the country. Kiln drying at these factories is not economical due to the cost of fuel, but each point carries a reasonable stock of blanks, kiln dried on the West Coast, for customers who ask for kiln dried arms. All these factories have well designed drying sheds in which the ventilation is controlled. All of these plants are equipped with precision instruments for checking the character of drying while the lumber is being conditioned, and in all of them the highest standards of lumber grading are followed.

Southern yellow pine when properly graded is rated equal in strength to Douglas fir. With proper care before treatment, then with pressure treatment under the recognized standards with high grade creosote oil, there can be no question of such arms lasting as long as any other part of the line structure. Pine arms are considerably heavier than fir, but are preferred in a good many localities, due to shorter distances from the source of supply and consequent saving in freight rates. Creosoted yellow pine crossarms are produced at Texarkana, Texas.

## Rainier Clear Douglas Fir Crossarm Specifications

## General

This specification covers clear Douglas fir crossarm in sizes 5x6-inch cross-section and smaller.

**Dimensions.** All arms furnished shall conform to the design and dimensions specified by the purchaser. Allowable variations shall be within the limits shown on the drawing included herewith. Where allowable variations are not shown approximate conformity to the dimensions given, consistent with good commercial practice, is required.

**Seasoning.** The average moisture content of any lot of arms shall be not less than 12% nor more than 20% of the oven dry weights. The difference between the moisture content of a section one-half the width and one-half the height of the arm, cut from the center, and the slabs surrounding such section shall not be more than 5%.

**Annual Rings.** Not less than 8 annual rings per inch on either end of the piece, except that arm having 33 $\frac{1}{3}$ % summerwood may have not less than 6 rings per inch.

**Checks, Shakes and Splits.** No arm shall contain shakes or splits. On top of arm, no checks more than 6 inches long. No checks anywhere shall measure more than one-third the length of the arm nor more in depth than one-fifth the distance to the opposite face.

**Grain.** Except in deviations at knots and pitch pockets, arms shall be free from spiral or diagonal grain with a slope of more than 1-inch in 12 inches.

**Knots.** No knots in clusters. No knot exceeding 1 inch in the middle half and no knot exceeding 1 $\frac{1}{4}$  inches in any part of the arm. No 6-inch section in the middle half shall contain plurality of knots of which the diameters added together exceed 1 inch and no 12-inch section elsewhere shall contain knots of which the diameters added together exceed 1 $\frac{1}{4}$  inches.

No knot exceeding  $\frac{1}{2}$  inch shall intersect any pin or bolt hole, and no knot exceeding  $\frac{3}{4}$  inch shall be closer than its own diameter to any hole bored for a wood pin.

Loose knots and knot holes that show no evidence of decay shall not be cause for rejection, provided their diameters are within the maximum limits for knots, and will drain water when the arm is in its normal position on the pole.

The size of any knot shall mean its measurement across the smallest diameter.

**Pitch Pockets.** Shall not exceed  $\frac{3}{4}$  inch in depth. No pitch pocket on top of an arm more than 4 inches in length, nor more than 8 inches in length elsewhere.

**Sapwood.** Not over  $\frac{1}{3}$  the girth of any cross-section.

**Loose Heart or Boxed Heart.** No loose heart nor heart centers.

**Rot.** No stain, rot or decay.

**Wane.** No wane within  $\frac{1}{4}$  inch of pin or bolt hole or on more than one edge. No wane surface more than  $\frac{3}{4}$  inch wide within 12 inches of the middle bolt hole, or 1 $\frac{1}{2}$  inches elsewhere.

**Warp.** A straight edge laid lengthwise on the concave surface of an arm shall show no offset for the arm greater than  $\frac{1}{16}$ -inch per foot of length. No arm shall be twisted or bent in more than one direction.

**Finish.** Arms shall be planed smooth on all 4 sides, cut accurately to length, ends coated with transparent but moisture-resistant gloss oil compounds, bored and roofed as ordered.

## Rainier Structural Douglas Fir Crossarm Specifications

**General.** This specification covers Rainier Structural Douglas Fir Crossarms made from dense select structural fir lumber in sizes 5x6-inch cross-section and smaller.

**Dimensions.** All arms furnished shall conform to the design and dimensions specified by the purchaser. Allowable variations shall be within the limits shown on the drawing included herewith. Where allowable variations are not shown, approximate conformity to the dimensions given, consistent with good commercial practice, is required.

**Seasoning.** The average moisture content of any lot of untreated arms of cross-section not exceeding 4x5 inches shall be not less than 12% nor more than 20% of the oven dry weights. The difference between the moisture content of a section one-half the width and one-half the height of the arm, cut from the center and the slabs surrounding such section shall not be more than 5%.

**Dense Material.** All crossarms shall be manufactured from lumber containing not less than six annular rings per inch on either one end or the other of a piece and in addition one-third or more summerwood (the dark portion of the annual ring) on either one end or the other. The contrast in color between summerwood and springwood shall be distinct.

Coarse grained pieces excluded by this rule are accepted as dense if they average one-half or more summerwood.

**Checks.** On top of arm. No checks more than 6 inches long. No checks anywhere shall measure more than one-third the length of the arm nor more in depth than one-fifth the distance of the opposite face.

**Grain.** Except in case of deviations at knots and pitch pockets, the grain, meaning the direction of the longitudinal wood fibers, shall throughout the central one-third portion of the arm, not depart from parallelism with the axis of the crossarm by more than 1 inch in 15 inches (approximately 4 degrees).

**Knots.** No knots in clusters. No knot exceeding  $\frac{1}{2}$  inch in its smallest diameter intersecting pin or bolt holes. In the middle half of the arm no knot exceeding  $\frac{3}{4}$  inch in diameter shall be closer than its own diameter to any hole bored for wood pins.

Otherwise any number of knots in any location may appear as follows:

Face.....inches 3-4  $4\frac{1}{4}$ -6  
Diam. between Center and Brace Bolt Holes in. 1  $1\frac{1}{4}$   
Diam. between Brace Bolt Holes and Ends in.  $1\frac{1}{4}$   $1\frac{1}{2}$

Loose knots and knot holes that show no evidence of decay shall not be cause for rejection provided their diameters are within maximum limits for knots, and will drain water when the arm is in its normal position on the pole.

Knots shall be measured across smallest dimension.

**Pitch Pockets.** Shall not exceed  $\frac{3}{4}$  inch in depth. No pitch pocket on top of an arm more than 4 inches in length, nor more than 8 inches in length elsewhere.

**Sapwood.** Bright sapwood permitted on not more than one-third the girth.

**Loose Heart or Boxed Heart.** No arms shall contain loose heart nor the exact pith center of the log.

**Rot.** Rot, dot or red heart will not be permitted.

**Wane.** Wand shall not be present within  $\frac{1}{4}$  inch of pin or bolt hole or on more than one edge of an arm. The width of the wane surface shall not exceed  $\frac{3}{4}$  inch within 12 inches of the middle bolt hole and  $1\frac{1}{2}$  inch elsewhere.

**Warp.** A straight edge laid lengthwise on the concave surface of an arm shall show no offset for the arm greater than one-tenth or an inch per foot of length. No arm shall be twisted nor bent in more than one direction.

**Finish.** Arms shall be planed smooth on all four sides, cut accurately to length, ends coated with transparent but moisture-resistant gloss oil compound, bored and roofed as ordered. All workmanship of highest commercial quality.

## Dimensional Tolerances

\*Brace bolt holes marked V drilled through the arm vertically; all others drilled horizontally.

## Soil Classification

The term soil classification indicates a basis by which you may estimate the amount of holding power an anchor of given size or design may be expected to have.

Soil classification is perhaps the most difficult factor to set up in a manner that can be interpreted fairly equally by all those concerned with anchor installations in all sections of the country. Attempts to classify soils by name, even generally, were misleading because of the numerous mixtures encountered in field conditions which, while they seemed to closely resemble each other, exhibited widely ranging strengths. Mixture of red and blue clay to one man was hardpan and to another was moist clay, etc. . .

A review of a large number of tests, however, revealed that moisture content and its effect on the soil in question, rather than a fine division of soils, was more of a determining factor provided the moisture content varied sufficiently to allow easily determined division points. Such a set-up did present itself and anchor holding powers estimated on this basis were much closer than those attempting to analyze the soil content. This set-up is offered as a suggested classification of soils for anchor installation.

### Class 1. Hard Rock (solid).

**Class 2. Shale, Sandstone,** (solid or in adjacent layers).

**Class 3. Hard, Dry,** (hardpan. Requires use of digging bar. Usually found under a Class 4 strata. Resembles soft rock.)

**Class 4. Crumbly, Damp,** (usually clay predominates. Insufficiently moist to pack into a ball when squeezing by hand. Particles crumble off).

**Class 5. Firm, Moist,** (usually clay predominates. Other soils commonly present. When squeezed by hand will form into a firm ball. Most soils in well drained areas will fall into this classification).

**Class 6. Plastic, Wet,** (usually clay predominates as in Class 5. Due to unfavorable moisture conditions such as areas subjected seasonally to heavy rainfall, sufficient water is present to penetrate the soil to appreciable depth and though the area is fairly well drained, the soil during such seasons becomes plastic and when squeezed will readily assume any shape. This soil is not uncommon in fairly flat terrain).

**Class 7. Loose, Dry,** (found in arid regions usually sand or gravel predominates. Filled in or built up areas in dry regions fall into this class. As the term implies, there is very little bond to hold the particles together).

**Loose, Wet,** (same as Loose Dry for holding power. High in sand, gravel, or loam content. Holding power at some seasons good, but during rainy seasons absorbs excessive moisture readily with resultant loss of holding power. Predominate in poorly drained areas).

**Class 8. Swamps and Marshes** (includes areas that are marshes only seasonally).

As pointed out before, most soils will vary some in their classification during a calendar year. Fortunately this variation is not too great in most cases due to the excellent drainage of the land or due to the presence of a water-shedding layer of clay or hardpan above the anchor. In some cases though, prolonged rains and melting snows have converted firm soils into a wet soft mass that flows about the anchor allowing it to work upward if the anchor loading is too heavy.

## Chance Never-Creep Anchors

### Without Rods

This anchor pulls against solid undisturbed earth; none of the holding area is wasted.

Easy to handle and easy to install. To install, bore the hole, drive rod into hole, and hang plate on rod.

Consists of a rod and a plate. Rod is drop-forged steel with thimble-eye head and pointed Never-Creep knob on lower end. Plate is a certified malleable casting.

Order the rod separately.

Chance Steel Expanding Anchors

Without Rods

The Chance Steel Expanding Anchor will withstand the most severe punishment without danger of breakage. It is fool-proof in construction and powerful in pull.

Easily installed in any position. Nut retainer prevents riding up the rod during expansion.

\*Not recommended for hard, dry soils.

Hubbard Hub-Anchors

Expanding Type

PATENT APPLIED FOR

Hubbard Anchors are made in two styles, two-way and four-way, and with various areas. Installation is accomplished by digging an 8-inch diameter hole (6-inch for No. 26050) at the proper angle for the guy, inserting the anchor and rod and applying any standard expanding tool until the anchor is fully expanded. Tamp dirt solidly after each three or four shovels-full, while back filling.

Hub-Anchors are constructed of heavy gage steel and will stand expansion into the hardest types of soil encountered without deformation.

No.	Per 100 Pcs.	Style	Area Sq. In.	Rod Diameter Inches	Approx. Ship. Wt. Lbs. per 100 Pcs.
26050	....	2-Way 6"	53	1 1/2 & 5/8	485

48135	....	4-Way 8"	135	5/8 & 3/4	1500

Chance No-Wrench Screw Anchors

With Rods

This anchor has a large triple eye rod which admits a bar for a wrench to use in screwing the anchor down.

Easy to install. Hub is small and the blade is sharp and thin. Drill point aids dirt displacement and speeds installation.

Has extra holding power because of small hub and wide tapered blade. Drop-forged steel rod and anchor are securely welded together at both top and bottom of anchor blade.

No.	Size Anchor Inches	Area Sq. In.	Rod, INCHES Diam. Lgth.	SOIL HOLDING STR., LB.				No. In. Bdl.	Wt. Lb. per 100
				Soil Classification					
				4	5	6	7

Chance Swamp Screw Anchors

Without Pipe

The Chance Swamp Anchor is so constructed that the pipe wedges into the hub and becomes a part of the anchor.

Extra lengths of pipe may be added to attain the desired depth.

The triple eye nut accommodates 1, 2, or 3-guy strands.

No.	Size Anchor Inches	Area Sq. In.	Size Pipe In.	*SOIL HOLDING STR., LB. Soil Classification	No. In. Bdl.	Wt. Lb. per 100
8125-A	8	50	1 1/4	6000	2	1300
10150-A	10	78	1 1/2	9000	2	1600
122-A	12	113	2	12000	2	2670
152-A	15	176	2	15000	1	3675

\*These values are only typical figures for installations extending 8 feet into the plastic clay underneath the layer of mushy silt or quicksand. Because of the wide variations found in testing in swamps, a test set-up is recommended where extensive guying in a swampy area is contemplated. High loads can be sustained where these anchors are driven very deep.

## Chance Rock Anchors

### With Rods

Before Expansion

This anchor eliminates the necessity for carrying lead, concrete, or grouting equipment on the job.

Installed in a small hole bored with hand or mechanical rock drill. Expanded and wedged against the side of the hole by turning the rod.

When strain is applied the wedge becomes tighter.

This anchor does an excellent, safe, rock anchoring job.

After Expansion

No.	Size Anchor Inches	Rock Drill Size Inches	Rod, INCHES. Diam.	INCHES. Lgth.	SOIL ANCHOR ULTIMATE STR., LB. Soil Classification 1	Wt. Lb. per 100
R-315	1 3/4	2	3/4	15	Rod Strength	498
R-330	1 3/4	2	3/4	30	Rod Strength	678
R-353	1 3/4	2	3/4	53	Rod Strength	954

Set in holes drilled 2 inches in diameter and 12 inches deep in hard rock, these anchors will develop the full strength of the anchor rod.

## Chance Wrench Type Screw Anchors

### With Rods

This wrench type anchor has a socket and a square shank combined. A regular screw anchor wrench fits down over the square shank that is built up inside the socket.

There is no danger of splitting the wrench and no need for extra wrench fittings.

Anchor is shipped complete with threaded steel rods and thimble-eye nuts.

No.	Size Anchor Inches	Area Sq. In.	Rod, INCHES. Diam.	INCHES. Lgth.	SOIL ANCHOR ULTIMATE STRENGTH, POUNDS Soil Classification	No. In. Bdl.	Wt. Lb. per 100

## No. 600 Chance Screw Anchor Wrenches

This wrench gives ample leverage for turning a screw anchor into the ground.

Net weight, 36 pounds.

## Chance Pyramid Cone Anchors

### Without Rods

The Chance cone anchor has flat opposing faces and flaring base, creating a wedging action that greatly increases holding power.

Nut retainer aids installation.

No.	Size Anchor Inches	Area Sq. In.	Rod, INCHES. Diam.	INCHES. Lgth.	SOIL HOLDING STR., LB. Soil Classification	Wt. Lb. per 100

19	19	336	1	120	Rod Strength	38500

\*In shale or stone, these anchors develop the strength of the rod.

## Everstick Cone Anchors

Used wherever rigid type anchor is required. Made of malleable iron with special ribbed construction which adds to its holding power and strength.

Everstick nut housing feature is used to assure a compact, tight connection between rod and anchor.

**HOLDING POWER.** In setting cone anchor, a sufficient amount of rock, dependent upon soil conditions, must be well tamped on top of anchor before back filled.

### Hubbard Steelwing Anchors

Hot Galvanized

Anchor turns into the ground like a corkscrew and holds against a large area of undisturbed earth. It is easy to install or reclaim and the large Hubeye permits the insertion of a bar for leverage. The wing diameter is stamped on the rod (except Nos. 7542 and 7543) just under the eye as a permanent, above-ground record of its holding strength.

The No. 7524 Baby Steelwing, furnished with a 4-inch wing, is designed for permanent light guying or a temporary anchorage for heavier guys.

Nos. 7542 and 7543 are smaller sizes designed for anchoring fences, trees and other similar light work.

## Hubbard Plate Anchors and Anchor Rods

Hubbard plate anchors are made of malleable iron and are used with Hubeye plate anchor rods.

A hole is dug at right angles to the line of stress and the rod driven through to it. The anchor plate is then lowered by an installing tool and hooked over the conical end of the anchor rod. Tension is applied and the hole is filled.

## Hubbard Hubeye Anchor Rods

Hot Galvanized

Tu-Hubeye

Designed to provide a smooth curve with an ample radius for protection to the strand at the bend, thereby eliminating the use of a guy thimble. The strength of the Hubeye is greater than that of the rod.

The Tu-Hubeye, for two guys, is forged with the same generous radius as the Hubeye.

## Hubbard Rock Guy Anchors

Hot Galvanized

No. 7544

Used in solid rock or in masonry. Installed at an approximate right angle to line of guy pull.

No. 7544 consists of a one-inch round steel bolt with a 1½-inch square head, 2 round washers and a round thimble. Bottom of bolt is split for a wedge which spreads end of anchor as it is driven against bottom of hole.

No. 7545

No. 7545 consists of two drop forged, wedge shaped sides, one shim and a ¾x2½-inch machine bolt. To install, a hole of the proper size is drilled and the two sides are placed in the hole. Shim is driven down between the two sides, expanding them against the sides of hole, and machine bolt is re-assembled. Anchor is then ready for use.

## Hubbard-Copperweld Alarm Box Grounders

No. 9335

The alarm-box grounder takes the place of the conduit and grounding wire previously used for connecting police and fire alarm boxes to ground. It makes a neat installation, which is quickly and easily installed, and will last a lifetime. Consists of a ¾-inch Copperweld rod with a bushing and a stranded copper lead wire for attachment to the alarm-box and internal mechanism.

The adapter type is for use on boxes with unthreaded holes. Copperweld staples for attachment to pole are also included. At bottom, it is connected to a ¾-inch ground rod with clamp No. 9492 or No. 9592.

## Hubbard Steel Ground Rods

Hot Galvanized  
With Copper Wire

The wired rod has a length of No. 12 gage copper wire bonded firmly to upper end with five inches free for making ground wire connection.

All possibility of wire stripping loose is eliminated by the top turn being looped under itself, relieving the bond from carrying strain concentrated at that point. Special lengths of wire can be furnished.

## Hubbard-Copperweld Sectional Ground Rods

Consists of three parts, the rod, the coupling, and the driving stud. Couplings are made of bronze and studs are made of a special steel to withstand driving blows.

Available in ½, ¾, and 1-inch diameter. The size of the sectional rod is the diameter of the thread.

When ordering sectional rods, stock numbers may be specified by adding a number 2 before the stock number of the standard rod. Furnished in 10-foot lengths.

## Hubbard Sectional Ground Rods

Hot Galvanized

Used where deep grounding is desired.

Continuous sections may be coupled together with a No. 9611 coupling and driven to any desired depth.

For driving by hammer, No. 9607 driving tool is furnished, which screws securely over end threads of ground rod and will not jam or injure threads during driving.

## Hubbard-Copperweld Ground Wire Clamps

## Type A

The great strength and high elastic limit of this non-ferrous clamp enables it to maintain permanently low-resistance grounding connections.

Accommodates solid or stranded ground wires, and is furnished either with safety set-screw or square head set-screw.

No. 9492 with Safety Set-Screw

No. 9592 with Square Head Bolt

Safety Screw Type No.	Sq. Hd. Bolt Type No.	Rod Diam. In.	Wire Size	Approx. Shipping Wt. Lb. per 100

9496	....	1 1/4	Pipe 4/0 Strand to 4 A.W.G. Solid...	120

## Type B

Designed to allow the use of Hubbard-Copperweld ground rods and clamps at a lower assembly cost.

Provides a permanent high pressure connection, which is made quickly without the use of solder.

With Safety Set-Screw				With Square Head Bolt	
6490	6590	$\frac{3}{8}$	6 to 14 A.W.G.		8
6491	6591	$\frac{1}{2}$	2 to 10 A.W.G.		15

6493	6593	$\frac{3}{4}$	2 to 8 A.W.G.		40

## Reliable Ground Rod Clamps

Furnished with 1/2-inch hex head screw.

At 200-225 pounds pressure, corners become rounded.

Coating minimizes corrosion and galvanic action.

Furnished with hollow head set screws when specified.

One hexagon wrench included with each 50 clamps or less.

Bronze clamps are for copper and copperweld rods.

Galvanized steel clamps are for steel rods and pipes.

## Hubbard U-Cable Guards and Straps

Hot Galvanized

When telephone or power cables enter the ground at the base of a pole or the side of a building, they are protected by U-cable guards. The guards are formed of No. 14 gage steel pressed to a U-shape which provides protection for pedestrians as well as providing stiffness for guard.

Nos. 7536 and 7537 have a 2½-inch inside diameter belled bottom to fit over ground conduit.

A. T. &amp; T. Co. Standard.

## Hubbard Hubeye Bolts

Hot Galvanized

No. 9062

No. 9152

Hubbard drop forged straight and angle Hubeye bolts are designed to provide a smooth curve through the eye with a large radius for protection to the strand at the bend, thereby eliminating the use of guy thimbles.

The eyes of the angle Hubeye bolts are forged at a 45° angle to the shank.

One-inch sizes have cut threads, smaller sizes are roll-threaded.

All Hubeye bolts are drive pointed.

### Hubbard Static-Proof Hardware

Static-proof hardware is a type of hardware that can be completely locked in place by using tapped washers and lock nuts and which offers larger areas of contact between the hardware and the structure.

Standard hardware on ordinary timber is subject to loosening by shrinkage of wood and vibration. If this fault is not corrected, it becomes necessary to retighten hardware regularly twice a year. This, in turn, results in an additional hazard due to the crushing of wood fibers each time the hardware is taken up, with consequent tendency to induce decay.

The design of static-proof hardware provides a bond between all metal parts. This bond is secured by thread washers and lock nuts and has the effect of making the hardware into a one-piece assembly.

All holes in arms or poles should be bored the same size as the bolt, assuring a drive fit. When ordering brace bolts, add 1/2-inch to standard lengths to allow for the use of tapped washers, and 1 inch to standard lengths for bolts where both standard nuts and washer nuts are to be used.

## Hubbard Threaded Flange Washers

Used on the arm end of wood brace attachments.

When a flanged washer is screwed against the arm with the flanges down, the brace slips over the bolt and is trapped by the flanges of the washer.

Flanges serve as a lock after installation and as a wrench hold for turning the washer tight.

No.	Per 100	DIMENSIONS, INCHES				Approx. Ship. Wt. Lb. per 100

## Hubbard Spring Washers

Hot Galvanized

No. 4629

No. 4538

Made of high quality spring steel. No locknuts need be used since the angle of the spring washer when compressed forms an effective lock.

No. 4629 is for use with pressed steel pole top pins. Mounted vertically on the back of the pole, No. 4629 locks the nuts on the pin mounting bolts.

No.	Per 100	Bolt Size	Hole Diam.	Steel Size	Overall Length	Approx. Ship. Wt. Lb. per 100

5038	5.52	1 1/4 x 3/16	1 1/16	1	10.1

## Hubbard Palnuts

Hot Galvanized

Applied after the regular nut is completely tightened. By continued turning of the Palnut, after it has contacted regular nut, prongs of Palnut are drawn into root of bolt thread locking the nut permanently.

The resilient Palnut takes no load from the regular nut. Palnut grips like the jaws of a chuck.

No.	Per 100	Bolt Size	Hole Diam.	Steel Size	Overall Length	Approx. Ship. Wt. Lb. per 100

### Peirce Pole Struts

Hot Galvanized

Pole can be made self-supporting or hog-guyed by means of pole struts.

Such trussed poles should be set in concrete, deeper than usual, and slack spans used on each side.

Made of heavy steel channel. May be sprung slightly during installation to fit variation in pole diameter. Three 1/2-inch lag screws attach them in position. Two struts are needed for each pole.

Braces are 1x1/2x1/8-inch channels for all sizes.

### Peirce Pipe Sidewalk Guy Arm Fittings

Hot Galvanized

No. 1522 to 1542  
End Fittings

Nos. 1521 to 1541 Pole Plates

Designed for two sizes of pipe, 2-inch and 2 1/2-inch. The smaller size fits over the central core and the larger size fits inside the outer shell. This arrangement is indicated by the top view of the end fitting diagram.

Assembly is secured by a set screw against the pipe or a machine bolt through the pipe.

A No. 7461 guy clamp is attached over the 5/8-inch stud which replaces the end bolt of the clamp.

Hubbard Guy Clamps

Hot Galvanized

No. 7461

No. 7402

Hot rolled to a 3/8-inch thickness from steel plates. Clamping principle employed is the straight, parallel groove, smoothly galvanized.

Particular care is exercised to keep clamp sections straight so that bolts will not be drawn tight on an area which may be warped out of contact with strand with consequent loss of holding power. Accurately spaced grooves and carefully centered holes. Cleanly sheared sections so that groove ends cannot cut or injure strand.

Clamp bolts are made of special steel to prevent elongation and eliminate stripping. Heads are made large to provide maximum clamping area and shoulders trap bolts to prevent turning while tightening.

Sizes with three or more bolts shipped with bolts reversed.

## Hubbard Drop-Forged Turnbuckles

Hot Galvanized

Eye and Shackle

Eye and Hook

Turnbuckle parts including bodies, hooks, eyes, and shackle, excepting plain stubs, are drop-forged from open hearth steel. Bodies are fitted with hexagonal ends so that turnbuckles may be taken up with a wrench at the end as well as with a lever at the center.

In the case of shackle assemblies, shackle bolts are furnished  $\frac{3}{8}$ -inch in diameter for the  $\frac{3}{8}$  and  $\frac{1}{2}$ -inch size turnbuckles;  $\frac{1}{2}$ -inch in diameter for the  $\frac{5}{8}$ -inch sizes;  $\frac{3}{4}$ -inch in diameter for the  $\frac{3}{4}$ -inch sizes;  $\frac{3}{4}$ -inch in diameter for the 1-inch sizes;  $1\frac{1}{8}$ -inch in diameter for the  $1\frac{1}{4}$ -inch sizes.

Stub and stub style is furnished for use where stubs are to be welded to tie rods and other similar types of construction. Special assemblies can be made to suit requirements.

## Hubbard Alloy Arm Braces

Hot Galvanized

Used extensively on distribution lines in alleys or where obstructions make it necessary to support wires on one side of pole and at points where poles must be sent slightly out of alignment. Arm being off-set in this case makes it possible to avoid a slight angle in the line. Braces are attached to pole with  $\frac{1}{2}$ -inch lag screws and to arm with  $\frac{1}{2}$ -inch machine bolts. Furnished with steps.

## Type A

For side arm mounting.

Hot Galvanized

## Rounded Corner Style

Made from new open hearth steel punched for a  $\frac{1}{2}$ -inch through bolt or lag screw at the pole end and  $\frac{3}{4}$ -inch carriage bolts at the arm end. Ribbed braces. Clearance is allowed so that ribbed portion does not interfere with attachment to arm on either side.

All braces are furnished with rounded corners.

## Hubbard Angle Crossarm Braces

In the construction of heavy pole lines, the one-piece angle steel crossarm brace is in general use. It fastens under the arm with 1/2-inch machine bolts and to the pole with a 5/8-inch through bolt or lag screw. Special sizes supplied on request. When ordering, state size of angle, A, B, and C dimensions, and hole sizes.

## Hubbard Crossarm Back Braces

Hot Galvanized

Used to reinforce crossarms at corners and terminal poles and in many cases eliminates the necessity for double arming.

The angles are made of open hearth steel and are attached to the arm by means of two 1/2-inch machine bolts at each end. If vertical brace is not used, crossarm attachment may be made by using 1/2-inch carriage bolts.

## Hubbard Square 2-Piece Wood Crossarm Braces

Made of hickory, 1 1/2-inch square, creosote dipped. Fitted with hot galvanized fittings. Under compression, the strain against the metal pieces at the lower end is borne by the wedging effect rather than the assembly bolts. The same is true at the top except that crossarm acts as one plane of the wedge. Under tension, reinforcing bolts prevent wood from splitting. Members are the same so they may be interchanged or mounted on either side of the pole.

Original series is for carriage bolt attachment to crossarm. B Series is for pin attachment. Pole and arm mounting bolts are not included. Nos. cover two pieces making one complete brace.

## Hubbard O-B Wood Guy Strain Insulators

Fittings Hot Galvanized

Provision is made for wood shrinkage and the loading of the wood fibers by friction and tension rather than by shear. These features are provided by the self-tightening grip and inner friction plates which will develop the full strength of the wood over a period of many years.

Furnished with arcing horns unless otherwise specified. The number 6 or 9 after the No. indicates length of clear wood.

### Rainier Crossarm Braces

Made Entirely of Wood

Provides the advantages of all-wood construction without reducing strength or life of pole structure or increasing its cost. Adequately survives shock and abuse.

The right and left-hand members are identical and interchangeable, any two pieces make a pair.

Only three bolts are required to install a pair.

Interchangeable with double span steel braces.

## No. 8902 Corner Cable Suspension Clamps

Hot Galvanized

SECTION A-A

For power or communication cable messengers. Used for heavy strains at corners where the included angle of the messenger is approximately 110° or over up to 180°.

It is used with the curved ends pointing toward the pole when the pull is toward the pole and with the curved ends away from the pole when the pull is away.

Used on 6000 and 10000-pound strand with the cable groove of the clamp below the pole bolt and on 16000-pound strand with the groove above the pole bolt. A reinforcing strap is

recommended when 16000-pound strand is used. Clamp is drop forged from high carbon steel.

Three-bolt type. Overall length, 7 inches. Mounting hole diameter, 1 1/2 inches. Strand size, 1/4 to 1/16 inch inclusive.

Shipping weight per 100 375 pounds.

No. 8902..... per 100 \$155.00

## No. 8930 Hubbard Crossover Clamps

Hot Galvanized

Used for clamping messengers together when they cross at right angles.

Size of strand, 5/16 to 1/2 inch. Size of sides, 3 1/4 x 1 1/2 x 1 1/2 inches.

Bolts furnished are 1/2-inch oval shoulder, clamp bolts.

## Hubbard Curved Lift Plates

Hot Galvanized

No. 8887

These plates are used under the eye of Hubeye angle bolts to distribute the strain of down-guys over a greater area.

Dimensions, 7x2 1/2 in.

All plates curved.

No. 8897

## Hubbard Drop Forged Bolt Eyes

Hot Galvanized

Used extensively for dead-ending and guying. The standard bolt eye may be used for attaching dead-ending insulators to the cross arm. The long type is often used for supporting suspension insulators with a hook in the cap of the upper unit.

Unthreaded slot provides clearance for the insertion of bolt.

No. 7514

No. 7515

## Hubbard Drop Forged Straight Bolt

## Hubeyes

Hot Galvanized

Has unthreaded slot to provide clearance for the insertion of bolts. Used for cross arm guying where a circuit has been dead-ended, although it is suitable for many other guying and dead-ending needs.

Follows the standard Hubeye design. Will take strand 1/2 inch diameter and under.

No.	Per 100	Diam. Bolt In.	Bolt Hole In.	Width Eye In.	Length Eye In.	Shipping Wt. Lb. per 100

## Hubbard Drop Forged Angle Bolt Hubeyes

Hot Galvanized

Used almost exclusively for down guys. Eliminates the use of strain plates, guy hooks, guy thimbles, nails and lag screws and saves from three to five feet of guy strand. Often used on the nut end of a bolt for a down guy attachment with a straight bolt eye under the head of the bolt as a dead-end.

Nos. 1100 and 1101 will take strand 1/2 inch diameter and under. Furnished with round unthreaded hole, no clearance being needed.

## Hubbard Drop Forged Standard Eye Nuts

Hot Galvanized

This eye nut requires the use of a thimble. Used on through bolts, eye bolts, double arming bolts, etc. and for other attachments where it is desired to convert a standard, threaded bolt to an eye bolt.

Commonly used for dead-ending a messenger wire or span guy on the threaded end of an angle hubeye bolt on the opposite end of which is attached a down guy.

## Peirce Detachable Pole Steps

Hot Galvanized

To install this pole step, slip the plate, which acts as a bearing surface for step, over lag screw and drive lag in until plate bites into pole. Step

slips down in a groove on each side of lag screw head and is prevented from turning by a lug projecting from bottom of plate. A nail driven through a hole in plate offers additional security against turning. Five steps per pole are generally used. Unlicensed climbing is prevented by removing steps.

## Hubbard Grade Clamps

Hot Galvanized

No. 8985

No. 8989

Used to prevent creepage where cables are run on grades. Presteel type is made with a large clamping area so that the soft cable may be firmly gripped but not crushed. It is tightened by means of the ¾x1-inch stove bolts furnished.

Drop-forged clamp is equipped with four ½-inch, oval neck clamp bolts, which cannot turn while nuts are being tightened.

Tolerances are held very close in order to grip both cable and messenger with the proper pressure when tightened in place.

Pounds.....per 100 \$42.26

## No. 8918

Used for the same purpose as No. 8917. Consists of a clamp and spacer with holes for two knobs.

Strand size,  $\frac{1}{4}$  to  $\frac{7}{16}$  inch.

Steel size,  $\frac{1}{8}$  inch. Insulator spacing,  $5\frac{1}{4}$  inches.

No. 8918, Ship. Wt. 152 Pounds.....per 100 \$133.29

## Type A Hubbard Pole Reinforcing Material

Hot Galvanized

When pole butts become rotted and weakened, reinforcing or stubbing is accomplished by the application of bands. Band and pipe assemblies are tightened in place by drawing the band together. No. 7852-A is a malleable casting which serves the same purpose as the pipe.

Band is attached first by a nail through the small hole in end. After wrapping pole and stub tightly by hand, a  $\frac{1}{2}$ -inch lag screw is driven through loose end so that it engages both inside and outside wrap. Lag screws may be driven in either of end holes which are spaced farther apart than others.

This allows lining up with nearest inside hole. Four bands and four pipes are needed for a set.

Lag screws and take-up bolts should be ordered separately.

## Hubbard Full Adjustable Pole Bands

Hot Galvanized

Designed so that deadends and guys may be attached at many different angles. One to eight or more attachments may be made from one band.

Accommodates poles 6 to 14 inches in diameter.

Shipped assembled with one 1x4-inch curved bolt and one  $\frac{3}{4}$ x $1\frac{3}{4}$ -inch cone head bolt. The point of the cone head bolt sinks into the pole and keeps the band from slipping or rotating. Extra cone head bolts for attaching dead-end clevises and clips must be ordered separately.

Bolts have square shoulders so they will not rotate in the rectangular slots.

No. 7278 guy clip attaches around the band by means of No. 7280 conical head bolt and has an oval thimble which will not rotate in the clip. Guy clip is furnished in two pieces, the top part of  $\frac{5}{16}$ x $2\frac{1}{2}$ -inch steel and the bottom of  $\frac{3}{16}$ x $2\frac{1}{2}$ -inch steel. The clevis bolt is a  $\frac{3}{4}$ x $2\frac{1}{2}$ -inch cotter.

Has an adjustment range to fit poles from 8 to 14-inch diameter.

Steel size,  $\frac{1}{4}$ x $2\frac{1}{2}$  inches.

Approximate shipping weight per 100, 1800 pounds.

No. 7295..... per 100 \$264.10

## Peirce Adjustable Pole Band Accessories

Hot Galvanized

No. 7141 is a standard button head pole step with a short shank for use with bands. Has  $\frac{3}{4}$ x $\frac{5}{8}$ -inch diameter thread.

No. 7588 is a clip for guy attachments, used to clip the strand to the pole above the cup of the band.

No. 8390 is a special bolt consisting of a  $\frac{1}{2}$ -inch shank with a standard  $\frac{5}{8}$ -inch bolt head so that it will be properly trapped in the pole band cup.

No. 8395 is a plate used under the ends of adjustable pole bands when assembled on fluted steel poles.

No. 8396 is an adapter for mounting secondary racks over the cups of pole bands. Has  $1\frac{1}{4}$ -inch extension.

No.	Per 100	Description	Size In.	Hole Size In.	Approx. Ship. Wt. Lb. per 100
7141	\$79.21	Pole Step.....	$\frac{5}{8}$ Shank	.....	103

8396	\$24.51	Rack Saddle.....	$2\frac{3}{4}$ x $1\frac{1}{2}$ x $\frac{3}{16}$	$\frac{1}{16}$	40

\*Price includes No. 8390 bolt.

## Peirce Pole Gains and Reinforcing Plates

Hot Galvanized

Used to form a highly efficient method of attaching and reinforcing a crossarm.

## Presteel Pole Gains

Used for attaching crossarms to poles efficiently and quickly without the need for gaining the pole.

Permits easy adjustment for alignment of the crossarm and spaces the arm away from the pole allowing ample drainage and ventilation.

Compared with gaining a pole for double arming, an added spacing of approximately 2 inches between arms is obtained by using metal gains. The four spurs on the gain insure permanence of the original alignment.

No.	Per 100	Arm Size Inches	Bearing Surface on Crossarm Inches	Steel Gage No.	Ship. Wt. Lb. per 100
5091	\$118.62	$3\frac{1}{4}$ x $4\frac{1}{4}$	$4\frac{1}{4}$ x6	9	288
5092	\$118.62	$4\frac{1}{2}$ x $4\frac{1}{2}$	$4\frac{1}{2}$ x6	9	288
5093	\$118.62	$3\frac{3}{4}$ x $4\frac{3}{4}$	$4\frac{3}{4}$ x6	9	288
5094	\$118.62	4 x5	5 x6	9	288

## Crossarm Reinforcing Plates

Designed to give greater effectiveness than the square washer.

Prevents checking and splitting of the crossarm at the point of attachment.

No.	Per 100	Arm Size Inches	Bearing Surface on Crossarm Inches	Steel Gage No.	Ship. Wt. Lb. per 100
5042	\$49.45	$3\frac{1}{4}$ x $4\frac{1}{4}$	$4\frac{1}{4}$ x $3\frac{3}{8}$	7	120

5047	\$73.52	6 x8	8 x $3\frac{3}{8}$	7	206

## Hubbard Extension Fixtures

Hot Galvanized

Diagonal Brace, Back Brace, and Vertical Brace Installed

When it is necessary to clear buildings or trees without the use of high poles, these fixtures are used. Also used to offset arms on a pole where such construction will partially relieve the strain of a slight angle in the line. This method of offsetting is also useful where lines follow country roads with many slight bends in both directions. With extension fixtures the poles may be set at the roadside, and by extending arms either toward road or away from road, to compensate for conditions, the wires may be strung in a straight line. A. T. & T. Co. Standard.

## †No. 8050 Diagonal Braces

For use on both 6 and 10-pin arms. Provided with a 6-inch step for lineman and may be used on either side of pole. Fastened to side of pole by a  $\frac{1}{2}$ -inch lag screw and to cross arm by a  $\frac{1}{2}$ -inch machine bolt.

Made of  $2 \times 2 \times \frac{3}{16}$ -inch angle steel. Bolts not included.

Length overall, 83 inches.

No. 8050, Ship. Wt. 1892 Pounds.....per 100 \$488.00  
†A. T. & T. Co. Std.

## †Back Braces

This brace is attached to pole by a  $\frac{5}{8}$ -inch through bolt and to cross arm by a  $\frac{1}{2}$ -inch machine or carriage bolt.

Made of  $2 \times 2 \times \frac{1}{4}$ -inch angle steel. Bolts not included.

## No. 8054 Vertical Braces—Communication Type

Designed for three arms spaced 12 inches apart, or two arms on 24-inch centers, additional arms being cared for by placing other Vertical Braces in Series with the first.

Made of  $1\frac{3}{4} \times 1\frac{3}{4} \times \frac{1}{4}$ -in. angle and provided with holes for  $\frac{1}{2}$ -in. bolts. Bolts are not included. Length over all, 30 $\frac{5}{8}$  in.

No. 8054, Ship. Wt. 792 Pounds.....per 100 \$175.87

†A. T. & T. Co. Std.

## No. 9240 Hubbard Guard Arm Braces

Hot Galvanized

This guard arm brace is used for supporting guard arms at points on poles where a cable is suspended.

Steel size,  $18 \times 1\frac{1}{2} \times \frac{1}{4}$  inches. Diameter hole straight end,  $\frac{1}{16}$  inch. Diameter hole bent end,  $\frac{3}{16}$  inch.

No. 9240, Ship. Wt. 170 Pounds.....per 100 \$49.94

†A. T. & T. Co. Std.

## Rainier Wood Insulator Pin Specifications

## Scope

This specification covers wood pins made of yellow locust (sometimes called black locust from the color of its bark).

## General

The specification and drawings are intended to include all instructions necessary for the guidance of the manufacturer in his work. They are intended to supplement each other and any details indicated in one and not in the other shall be executed the same as if indicated in both.

**Dimensions.** Pins shall be of the style and dimensions shown, and allowable variations must not be exceeded. Pins and threads shall be smoothly and accurately formed. Figures on the drawing shall be followed in preference to scale measurements.

**Seasoning.** Pins manufactured from green or partially seasoned wood shall, when seasoned, conform to the requirements of this specification.

**Material.** Finished pins shall not contain any of the defects listed below, and, where any of these defects are present, they shall be cause for rejection.

**Annular Rings.** Rings which depart from parallelism with the center line of pin by a sufficient amount to allow a ring starting at the center of the bottom of the pin to run out of the side below the lower thread.

**Checks.** Checks exceeding 3 inches in length or  $\frac{1}{16}$  inch in width.

**Knots.** Loose or unsound knots. Sound knots exceeding  $\frac{1}{8}$  inch in diameter above the shoulder or exceeding  $\frac{1}{4}$  inch in diameter below the shoulder. The least diameter of a knot shall be considered its diameter for the purpose of this specification.

**Loose Heart.**  
**Pitch Pockets.**

**Rot.**

**Sapwood.** Sapwood exceeding  $\frac{1}{8}$  inch in thickness except on the shoulder of the pin.

**Shakes.** Cracks or splits concentric to the annular rings of the wood.

**Wane.** Wane or bark above the shoulder.

**Worm Holes.** Worm holes in the top 7-inch section of the pin.

## Allowable Variations

## Rainier Wood Insulator Bracket Specifications

Bracket

Pole Step

**Scope.** This specification covers wood brackets made of oak.

**Brackets.** Brackets shall be free from cracks, shakes, brashy wood and all other imperfections, except as hereinafter specified.

**Seasoning.** The maximum moisture content of seasoned brackets shall be 20%.

**Checks.** The presence of checks is permitted provided that they do not extend into the threaded section of the bracket or intersect any nail hole and are not greater than 2 inches in length.

**Grain.** The grain shall be straight and shall be practically parallel to the axis of the threaded portion of the bracket. The grain at either of the right-angled corners at the end of the bracket shall not run out below the bottom thread on the opposite side of the bracket.

**Insect-Holes.** In wood otherwise sound, a few small insect-holes not exceeding  $\frac{1}{16}$  inch in diameter may be present, provided that they are scattered and appear only in the portion of the bracket between the turned section and the small nail hole. No more than 5% of the brackets furnished shall contain such insect-holes.

**Knots.** Brackets shall be free from loose or unsound knots. Sound knots are permitted in the turned section of the bracket up to a diameter not greater than  $\frac{1}{4}$  inch, provided that the distance between any 2 knots is not less than 1 inch. Sound knots are also permitted in the portion between the turned section and the small nail hole up to a diameter not greater than  $\frac{1}{2}$  inch, provided that not more than 3 knots are present in this portion of the bracket and that all such knots are at least  $\frac{1}{4}$  inch distant from either nail hole.

**Sapwood.** Brackets may contain sapwood along any edge provided it does not appear on any face to a distance greater than  $\frac{1}{4}$  inch from the edge.

## Peirce Forged Steel Pins

Tapered Body—Lead Thread

Hot Galvanized

Long Shank Type

Short Shank Type

Designed to carry the full strength of the pin body to the top regardless of the length. Under excessive strain where a yielding of the pin occurs, it will be found to take place in a uniform manner indicating the absence of any weak spots. The yield also occurs below the pin threads eliminating all danger of insulator fracture from this cause.

Lead threads are securely bonded to the steel and carefully formed to meet insulator manufacturers' standards. There are no troublesome fins or mold marks to hinder insulator installation or to cause imperfect seating of the insulator. Lead tops are recessed to prevent localized pressure on the insulator top when it is turned down too tightly. This feature eliminates popping off insulator tops. Base diameters insure proper bearing on the arm for maximum resistance to strain.

Made solid, of one-piece forgings. There are no joints, seams, or weak spots.

Pins are furnished with lock washers.

Special pins for insulators having 1½-inch pin hole can be furnished.

## Hubbard Forged Steel Pins

With 1-Inch Lead Thread for Low Voltage Insulators

Hot Galvanized

For lighting, telephone and telegraph lines on which insulators with 1-inch pin holes are used. Eliminates danger of extreme temperature changes causing rupture of porcelain due to expansion.

Pins can be driven into crossarms or poles without injury to thread, although driving is not recommended.

## Long Shank Type—For Wood Crossarms

Furnished with lock nuts.

## Peirce Pole Top Pins

Hot Galvanized

For higher voltage lines, extra heavy pipe pins are often used because of their high strength and light weight. They offer a considerable extension above the pole top.

Mounting holes are 1/16 inch in diameter.

If it is desired to mount these pins by means of the pipe supporting fixtures listed below, specify pins with bottom mounting hole only.

**Peirce 1-Inch Drop-Forged Clamp Pins**

Hot Galvanized

May be used at angles in the line when assembled with a crossarm reinforcing plate.

On straight line runs the pin is used without the plate and is prevented from canting by two  $\frac{1}{4}$ -inch lugs. Mounting slots are for  $\frac{1}{2}$ -inch diameter crossarm straps.

Has 1-inch lead thread.

Size of crossarm, 4x5 inches and smaller.

Pin height above arm,  $4\frac{3}{4}$  inches.

No. ....	4420
Per 100 .....	\$82.21
Shipping Weight per 100 .....	pounds 175

**Peirce Wide Base Clamp Pins**For 1-Inch Pin Hole  
Hot Galvanized

Designed for angle and corner construction.

Each pin is forged from a single piece of hot rolled open hearth steel. The broad base rests evenly on the arm and prevents pin from cutting into the wood, while the four lugs hold the pin from twisting on the crossarm.

Pins are used with  $\frac{5}{8}$ -inch crossarm straps.

Pin height above arm,  $5\frac{3}{4}$  inches.

Flat Base No.	Curved Base No.	With Lead Threads		Size of Crossarm Inches	Ship. Wt. Lb. per 100

Shipping weight per 100, 109 pounds.

No. 5008 . . . per 100 \$55.88

### Hubbard Centering Washers

Hot Galvanized

Used on stock cross arms which have been drilled for wood pins, to adopt washer to smaller shanks of steel pins. Top centering washer designed to draw down into pin hole when pin is tightened on arm, leaving top surface clear for pin base. May be used on either flat or roofed arms.

Top centering washer may also be used on bottom of arm if a standard flat washer is placed between it and nut.

### Malleable Iron Bottom Centering Washers

## Hubbard Insulated Clevises

Hot Galvanized

Nos. 1342 and 1333

A standard, flat steel type clevis for mounting on a through bolt or an insulator bolt. Designed for  $\frac{5}{8}$ -inch bolts. Uses the standard No. 355 dry process insulator for low voltage lines. Oval mounting hole,  $1\frac{1}{16} \times \frac{3}{4}$  inches.

Shipping weight, 253 pounds per 100.

No. 1342, with Insulators (No. 355 Dry)..... per 100 \$66.67  
No. 1333, with Insulators (No. 455 Wet)..... per 100 69.83

No. 1341

Uses the No. 1606 dry process insulator.

These clevises are similar except for the attachment hole. No. 1341 has oval hole for  $\frac{5}{8}$ -inch bolts; No. 1343 has round hole for  $\frac{1}{2}$ -inch bolts.

Shipping weight, 154 pounds per 100.

No. 1341..... 1341  
With Insulators..... per 100 \$50.23  
Mounting Hole..... inches  $1\frac{1}{16} \times \frac{3}{4}$  Oval

No. 1339

Popular for rural construction. Has sufficient conductor clearance for low or medium voltage lines.

Uses No. 1608 wet process insulator. Oval mounting hole,  $1\frac{1}{16} \times \frac{3}{4}$  inches.

Shipping weight 165 pounds per 100.

No. 1339, with Insulators..... per 100 \$56.82

No. 1340

This clevis has a higher flash-over rating than the No. 1339. Used where high mechanical strength is desirable as well as electrical efficiency.

Furnished in  $\frac{3}{16} \times \frac{1}{2}$ -inch steel with  $\frac{5}{8}$ -inch diameter cotter bolt. Uses No. 1609 wet process insulator. Oval mounting hole,  $1\frac{1}{16} \times \frac{3}{4}$  inches.

Shipping weight, 288 pounds per 100.

No. 1340, with Insulators..... per 100 \$73.53

No. 1330

Used extensively on medium voltage lines for corner or dead-end attachments. Especially for 4000-volt primaries.

The  $\frac{5}{8}$ -inch attachment bolt is designed for fastening on eye or hook bolts. Pole mounting bolts not included. With lead sleeve on insulator bolt at extra cost.

Uses No. 1613 wet process insulator. Machine mounting bolt,  $\frac{5}{8} \times 2\frac{3}{8}$  inches.

Shipping weight, 572 pounds per 100

No. 1330, with Insulators..... per 100 \$187.54

No. 1344

Designed for through bolt or crossarm bolt mounting. Similar to No. 1330 clevis shown above.

Mounting bolts are not included. With lead sleeve on insulator at extra cost.

Uses No. 1613 wet process insulator.

Oval mounting hole,  $1\frac{1}{16} \times \frac{3}{4}$  inches.

Shipping weight, 550 lbs. per 100.

No. 1344, with Insulators..... per 100 \$167.64

## Hubbard Standard Thimble Clevises

Hot Galvanized

No. 673

Freedom of the thimble allows enough swing for a desirable flexibility.

Used for dead-ending lines to suspension insulators.

Formed by combining a special wire rope thimble with a pressed steel attachment clevis.

Thimble has a 2-inch diameter for the conductor loop and a groove for  $\frac{3}{4}$ -inch strand or smaller.

No.	Per 100	Steel Gage	DIMENSIONS, INCHES		Approx. Ship. Wt. Lb. per 100
			Cotter Bolt Diam.	Strand or Wire Size	
673	\$67.60	9	$\frac{5}{8}$	$\frac{3}{4}$ or Under	95

## Hubbard Hi-Tension Thimble Clevises

Hot Galvanized

Designed for dead-ending lines of high voltage. A  $3\frac{1}{2}$ -inch diameter makes it especially desirable for aluminum and copper conductors.

Pressed in a single piece with a wire groove suitable for  $\frac{3}{4}$ -inch or smaller conductors.

There is ample clearance for armor rods or tape.

No.	Per 100	Steel Gage	DIMENSIONS, INCHES		Approx. Ship. Wt. Lb. per 100
			Cotter Bolt Diam.	Strand or Wire Size	
675	\$89.73	12	$\frac{5}{8}$	$\frac{3}{4}$ or Under	95

## No. 674 Hubbard Open Side Thimble Clevises

Designed to eliminate the difficulties of line threading. Intended for angle work from 30° to 60°; can be used for lesser angles if desired.

Tie-wires can be used safely without danger of crystallization.

Side wire groove,  $\frac{3}{4}$  inch; diameter of thimble,  $3\frac{1}{4}$  inches. Length overall,  $6\frac{5}{8}$  inches.

No. 674, Shipping Weight 145 Pounds..... per 100 \$94.72

## Hubbard Insulated Clevises

Hot Galvanized

No. 561

Formed of  $1\frac{1}{2} \times \frac{3}{16}$ -inch channel steel. A sturdy dead-end or corner attachment.

Used with No. 355 dry process insulator for low voltage lines.

Oval mounting hole,  $1\frac{1}{16} \times \frac{25}{32}$  inches.

Shipping weight, 242 pounds per 100.

No. 561, with Insulators..... per 100 \$84.25

No. 8820

Formed of flat steel.

Has  $1\frac{1}{16}$ -inch round mounting hole for  $\frac{5}{8}$ -inch mounting bolts.

Uses No. 357 dry process insulator.

Shipping weight, 131 pounds per 100.

No. 8820, with Insulators... per 100 \$46.13

## Peirce Crossarm Clevises

Hot Galvanized

For dead-ending line wires on single arms.

No.	Per 100	Cross-Arm In.	Diam. Steel In.	Steel Plates In.	Ship. Wt. Lb. per 100

## Peirce Porcelain Strain Insulators

## Standard Type—Dry Process

No. 506

Ordinarily used for dead-ending secondary circuits or guying.

Made with dimensions in accordance with recommended specifications of the Edison Electric Institute. Sharp corners and edges have been eliminated.

The radius of bolt or wire hole gives maximum bearing surface on clevis bolt. It may be used with guy strand or insulated wire.

When ordering insulators and clevises not listed as being applicable to each other, or when fitting different makes of insulators on

clevises, make certain that proper clearances are allowed.

Clevises are not included with insulators.

## Hubbard Strain Insulator Clevises

## Barmack Drop-Forged Type (Patented)

## Hot Galvanized

Designed to provide a strong and adjustable means for dead-ending wires. Will fit many sizes and types of strain insulators. Well adapted to dead-ending on steel work where the size of the attaching hole is too small to permit the use of the ordinary steel clevis. Also used to assemble two strain insulators in series.

To assemble the split clevis place the two members into opposite grooves of insulator and estimate the spacing between parallel flat flanges of clevis. Insert curved bolt and screw nut on until above spacing is obtained. Then

securely fasten assembly to eyelet or steel structure with the 1/2-inch bolt.

### No. 9270 Hubbard Transposition Brace Plates

Hot Galvanized

This brace plate is designed to prevent the transposition bracket from being pulled out of vertical, on slight angles in the line, because of the constant strain in one direction.

Holds the bracket in perfect alignment under excessive side pull.

Used with Nos. 9262 and 9275 on R.S.A. roofed cross arms.

No. 9270, Ship. Wt. 58 Pounds.....per 100 \$48.93

### No. 3144 Hubbard Pole Top Brackets

Hot Galvanized

No. 3144

Made of  $\frac{3}{4}$ -inch round steel braced with  $\frac{1}{4} \times 1\frac{1}{4}$ -inch flat steel.

Lead thread is standard 1-inch Allen type.

All joints are solidly welded.

No. ....	3144
Spread.....inches	16
Bolt Spacing.....inches	$7\frac{3}{8}$
Shipping Weight per 100.....pounds	450
Price upon application.	

### Hubbard 1-Piece Transposition Brackets

No. 9265 Hubbard Transposition Brackets

Hot Galvanized

No. 9265 is bolted to the pole by 1/2-inch machine bolts.

Uses two No. 8015 pins and glass insulators.

A special bridging washer is used in attaching the top pin.

Pin hole size, 1/16 inches. Pole mounting hole size, 3/16 inches.

Channel size, 1 1/2 x 3/8 x 3/8 inches.

Approx. shipping weight, per 100, 250 pounds.

No. 9265..... per 100 \$72.79

Peirce Single Point Type Transposition Brackets

Hot Galvanized

Made of channel steel and fitted for one insulator.

Threads are standard 1-inch diameter.

No. 20110 is used for normal spans and No. 20111 is used for long spans.

Unless otherwise specified, cross-arm U-bolt No. 1021, for 3 1/4 x 4 1/2-inch arms, will be furnished.

Furnished punched and slotted.

20111	113.24	1 x 1/2 x 1/8	3 1/2	4 1/2	8	171

Hubbard Point Type Transposition Brackets

Hot Galvanized

Hubbard point type right and left hand transposition brackets are attached on standard crossarms through adjacent pin holes with 1/2x6-inch crossarm bolts fitted with a clipped washer. Both attachment holes are slotted to provide a total of two inches of adjustment.

Mounting hole spacing, 10 to 12 inches.

Line spacing, 6 3/4 inches.

Base steel size, 1/4 x 3 x 13 5/16 inches.

Point steel size, 3/4-inch round.

System of Transposition  
PATENTED

In establishing a transposition of the right and left hand point type, a pair of brackets is employed as shown by the illustration in which one wire is black to distinguish it from the other.

Assuming that a complete transposition is the crossing of one wire over the other and then eventually back to its original position in relation to the other wire, two complete transpositions are shown by the illustration. Note that the first one is black over white and the second is black under white, maintaining perfect balance. No cutting is necessary, and no tangles result when arms or poles are wrecked as is the case with the spiral type of transposing on the average bracket.

Mounting slots fit standard drilled arms with a 2-inch adjustment range.

Mounting bolts are furnished.

Lead thread or wood cobs are available.

Hubbard point type brackets listed were designed specifically for use with this system. The purchaser of Hubbard brackets is assured a license permitting the transposing of wires as covered by the above patent.

If further details are desired, communicate with the nearest Hubbard factory office.

**Hubbard Hub-Rak Secondary Racks**

Hot Galvanized

Designed with a heavy pressed steel back and forged points.

**Line Type** racks are made with both extended and non-extended backs. Numbers for non-extended back racks are obtained by suffixing the letter A to the standard number. For example, a 3-wire Hub-Rak with 8-inch spacing and extended back would be 30648; non-extended back would be 30648-A.

**Service Type** is made with extended backs only.

**Peirce Secondary Racks**

Standard Type

Hot Galvanized

Rack points are of No. 9 gage steel with rounded tops so that wire insulation will not be harmed while stringing. Play between points and insulator is sufficient to eliminate jammed wires. Mounting may be accomplished at any point through the back with through bolts, using the No. 3350 mounting washers furnished. With or without insulators. Side mounting slots are for  $\frac{3}{8}$ -inch lag screws.

## Peirce Extension Brackets

For Secondary Racks

Hot Galvanized

Used for mounting secondary racks when a greater extension from the supporting structure is desired than the rack itself offers.

Made in two styles, with flat and curved backs, for wall and pole use respectively. Both styles have one 1/16-inch hole and two 9/16-inch holes for mounting.

Made of No. 9 gage steel to provide a 6-inch extension, and a 4-inch bearing on the pole or wall.

Equipped with one 5/8x2-inch carriage bolt.

Also has two 3/8-inch holes in bottom (one at each end) to allow water to drain out.

**Pierce Insulated Telephone Knob Screws**

Hot Galvanized

**No. 2919**

Porcelain knob used generally for running telephone wires along the sides of buildings.

Provided with small white glaze insulator No. 2917. Overall length, 3 inches. Size screw, No. 11x1 $\frac{1}{8}$  inches.

No. 2919, with Insulators, Ship. Wt. 11

Pounds.....per 100 \$23.39

**No. 2920**

May be used for dead-ending duplex or twisted pair telephone wires. Also as a service attachment for low voltage power lines in localities not visited by snow and sleet.

Provided with large brown glaze insulator No. 2927. Overall length, 4 $\frac{1}{4}$  inches. Size screw, No. 22x2 $\frac{1}{2}$  inches.

No. 2920, with Insulators, Ship. Wt. 48 Pounds  
.....per 100 \$33.12

**Pierce Primary Lead Wireholders**

A wet process porcelain wireholder so designed that it has sufficient leakage distance for primary voltages.

Either style may be used in the arm or pole. Unless otherwise specified No. 1650 will be furnished with cemented-in screw. If desired that screws be leaded in, specify by adding the letter L after the number.

**No. 1660****No. 1650**

**Plastic Tree Wire Guard**

For auxiliary protection on power and light conductor or telephone drop wire where it is impracticable to obtain adequate clearance from trees making it necessary to protect conductor or wire from abrasion. Particularly useful where conditions require protection on a considerable length of wire.

Can be thread over an end of the drop wire at the time of installation or can be spiralled on the wire after it is already in place. It is held in position by an S clamp placed at each end of the guard, or series of guards, or can be fastened at each end with friction tape.

Made from a flat strip of clear Tenite II (cellulose acetate butyrate) which is wound into a close helix to form a guard three feet long.

Available in five sizes;  $\frac{3}{8}$ ,  $\frac{5}{8}$ ,  $\frac{3}{4}$ , 1, and 1 $\frac{1}{4}$  inches (inside diameter).

Packed 10 in a carton.

**Premax Embossed Aluminum Letters and Figures**

Made of 99% pure aluminum rolled especially for this purpose, will neither rust, tarnish nor corrode. Plain finish. Being perfectly smooth, letters and figures do not catch or hold dirt.

Standard packing, 100 per carton.

## Reliable Solderless Connectors

Reliable Connectors are available for use with all types of conductors. Tap connectors for copper, copperweld, aluminum and steel conductors and for guy strand are designed with precision threads to maintain high pressure solderless connections.

Made of 90% copper high strength bronze. The bronze connectors resist corrosion and are not subject to season cracking.

## Chance Perma-Grip Tap Off Clamps

Carefully, scientifically proportioned to give proper electrical conductivity, maximum mechanical strength, and symmetrical appearance. Current carrying capacity is in proportion to that of the maximum jumper wire for which each clamp is designed.

Tests reveal a minimum yield point of 165 inch-pounds and an ultimate strength in excess of 260 to 500 inch-pounds (depending on size) applied torque on eye screw.

Gripper is designed for three-point contact with the conductor.

U.S.S. threads on the high strength bronze eye screw permit quick, easy application, and a tight positive grip with greatly minimized danger of sticking due to corrosion.

Clamps with S.A.E. threads available on request. If hex screws are wanted, specify on order.

TYPE CC. Copper to copper connection.

TYPE CA. Copper to aluminum connection.

TYPE GP. General purpose connection.

TYPE AA. Aluminum to aluminum connection.

TYPE AC. Aluminum to copper connection.

## Chance Fused Tap Clamps

## 50-Ampere Capacity

Used where a fused protective device is required for transformer installations or branch line taps on 2300 to 15,000-volt lines. Provides protection for rural line tap-offs. Easily installed and removed with a clamp stick.

Has high rupturing capacity, ample flashover value, and positive vibrationproof contact. Designed to extract fuse links and thus reduce arcing with its charring effect inside fuse tube.

Tapper is provided with a Tips Snap Clamp. The fuse tube is a lightweight, corrosion-resisting, waterproof, laminated plastic of great mechanical strength. Fiber lining quenches arc.

Type of connection: No. S1630-CC, copper to copper; No. S1630-AC, aluminum to copper.

### Reliable Telephone Drop Wire Clamps

An ideal device for attaching No. 17 B.&S. twisted pair or parallel drop wire to poles and buildings.

The clamp makes a very neat appearing installation. It is easy and quick to install. Two of them can be used to make an angular turn. Slack in drop wires can be taken up quickly without leaving any weak spots.

**The P Clamp** is wedge-shaped, with a copper wire loop at one end for hooking over a common drive hook, masonry hook or porcelain knob. When using twisted pair wire, it is essential to parallel the wires through the clamp.

**The R Clamp** for resistance braid (heavy duty drop wire) is the same design as the P clamp but is slightly larger.

No.	Per 100	Cable	CLAMP RANGE, IN. Max. Min.	Width In.	Bail Lgth. In.	Std. Pkg.	Ship. Wt. Lb. per 100

#### Steel Drive Hooks

Hot dipped galvanized, 7/16-inch diameter, 5 1/4 inches long. Shipping weight per 100, 26 pounds.

Per 100..... \$8.20

### Reliable Concentric Cable Clamps

#### Flexible Bail Type

The concentric cable clamp is a low cost clamp that holds the cable securely under all conditions without bending or snubbing or otherwise damaging the insulation.

It is made of non-corrosive metals and has a large margin of strength over field requirements. It is easy to install and neat in appearance.

## National Nicopress Splicing Sleeves

The Nicopress sleeves, for the splicing of copper, copper-weld, steel, and A.C.S.R. conductors, are easily installed, and the resultant splice, which is of permanently high conductivity, exceeds the rated strength of the conductor.

### Stock Number—Nicopress Sleeves

Every Nicopress sleeve has a stock number. This is of value to the customer as well as the manufacturer, in that the stock number, which consists of three parts, alludes to the material of which the sleeve is made, the diameter of the wire on which the sleeve is used, and the proper tool groove for compressing the sleeve.

The first section of the stock number identifies the metal of which the sleeve is made by means of any one of the numerals from 1 to 5. Numeral 1 designates copper sleeves, 2 designates galvanized copper sleeves, 3 designates bronze sleeves, 4 designates galvanized bronze sleeves, and 5 designates galvanized steel sleeves.

The middle section or next three numerals of the sleeve stock number denotes the decimal equivalent of the diameter of the wire for which the sleeve is suitable.

The third part, or letter, at the end of the sleeve stock number indicates the Nicopress tool groove required to properly compress the sleeve. The several Nicopress tool grooves or dies are identified and marked by a letter and any Nicopress sleeve whose stock number ends with that letter can be compressed in that particular tool groove.

### For Example: (Sleeve No. 1-162J)

- 1 Indicates Copper
- .162 Indicates Diameter of 6B & S Copper
- J Indicates Proper Tool Groove

### Stock Number—Nicopress Dead-Ends

The stock numbers of Nicopress dead-ends are practically the same as for the splicing sleeves except that they have a prefix of either 7 or 9. The figure 7 indicates that it is a suspension dead-end, and the figure 9 indicates that it is an offset type dead-end; thus 71-162J and 91-162J, respectively, are the stock numbers of the suspension and offset dead-ends.

### Nicopress Repair Sleeves For Replacing Defective Line Wire Joints

When cutting out defective joints in line wire, the ideal way to re-splice is with the Nicopress repair sleeve. The length and the design of this sleeve allows the wire to be re-spliced without having to change the initial line wire sag and eliminates the cutting in of a new section of wire.

### For Copper Wire

### Nicopress Split Repair and Reinforcing Sleeves

By applying the Nicopress split repair sleeves or reinforcing sleeves to the damaged strands of A.C.S.R. or copperweld, conductivity and strength are re-established without the bother of cutting and re-splicing the conductor at the damaged point.

### National Nico-Taps

#### Completed Tap

For tap-off connections of line to drop, line to line, and pair to drop. Easily and quickly installed.

Features installation over conductor without cutting or disturbing the line wire in any way.

## Nicopress Suspension Dead-Ends

Completed Suspension Dead-End

Conductor is inserted straight through the shouldered sleeve and compressions are then made with the same Nicopress tool groove that is used for the splicing of that size wire. No bending, bolting of, or damage to the conductor occurs.

## Nicopress Tools

For Telephone, Telegraph, and Signal Work

In making the splice the tool must be of a size that is convenient and practical for the lineman to handle either in the air or on the ground. It must be so efficient in use that pressure can be applied with a certainty that each compression made will be exactly as required.

No. 17

No. 17-2. For splicing drop, bridle, and inside wire. Length, 8 inches. Weight, 9 ounces.

No. 31

No. 31. For communication line wire. Available in groove combinations, DC, DJ, CE, DE, CJ and EJ. Also available with single grooves. Length, 11 1/2 inches. Weight, 2 pounds.

No. 41

No. 41. Available in groove combination MJ. Length, 15 inches. Weight, 3 1/2 pounds.

No. 51

No. 51. For copper and copperweld power conductors. Available in groove combinations PJ, TJ and XJ. Tools for A.C.S.R. are 51-Apple for 6 and 5 A.C.S.R.; 51-Orange for 4 A.C.S.R.; 51-Peach for 2 A.C.S.R.; and 51-Plum for 1/0 A.C.S.R. Length, 18 inches. Weight, 4 pounds.

No. 3

No. 3. Single groove only for W, G3, E5, S and L. In two-groove combination F6 and E8.

Hand operated and are similar in design to tools above except that the length is 35 inches and the weight 12 pounds.

## No. 635 Nicopress Hydraulic Tools

For splicing large conductors and high tensile overhead ground wires. Interchangeable dies cover a wide range of sleeves for copper, A.C.S.R., copperweld, and steel strand. Approximate weight, 50 pounds.

### National Twist Sleeves National Double Tube Copper Sleeves

Completed Double Tube Splice

Made from the best grade of pure copper, exact to size.

### National Galvanized Cable Rings With Tension Grip For Hanging Cable

2 Cables on Single Strand with Regular and Extra Long Rings

Handy-Five Cluster

The Extra Long Ring

Quickly and easily placed on the messenger, and once in position, will not slip along or jump off, remaining rigid in position because of the tension grip design. Use of these rings enables pulling the cable from either direction and eliminates necessity of reriding the messenger to replace or respace rings. Made from flat, high carbon steel wire with rounded edges. Hot-dip galvanized, with an even deep coating of zinc assuring smoothness and long life.

Gathered in Handy-Five Clusters for convenience in handling. This simple method of gathering, prevents hooking together of rings and does away with all ground litter.

### National Regular Cable Rings

Size In.	Cable Diameter Inches	*Strand Size	Std. Pkg.	Approx. Ship. Wt. Lb. per 1000

3	....	7 1/2	200	255
3 1/2	....	8	200	270

Can also be furnished in copperweld and calsun bronze.

\*Made in all strand sizes. Specify size desired.

### National Cable Ring Saddles

Furnished in aluminum, galvanized steel, and bronze.

Made in sizes 1 1/2, 2, 2 1/2, 3, and 3 1/2 inches.

## Diamond Aerial Cable Supports

The purpose of aerial cable supports is to supply flexible supports at each side of the pole to prevent ring cut. The strap is wrapped around the cable three times over itself, passing through the hinge member. Adjustable to any height. Provides a flat bearing which will not injure the cable sheath.

The supports are placed two on each side of each pole. They are placed 20 inches apart.

The aerial cable support is composed of a zinc strip, a hinge joint member which holds the free end of the zinc strip in position on a soft galvanized U-shaped wire, 5 inches long.

No.	Per 1000	Length Strap Inches	Maximum Diameter of Cable or Sleeve Inches	Maximum Circumference of Cable or Sleeve Inches	Standard Carton	Weight Pounds per 1000
891	\$75.00	10	3/4	2 5/16	500	84
892	91.00	16	1 1/16	3 5/8	500	110

897	225.00	64	6 1/2 S	20 1/2	200	315
*898	264.00	64	6 1/2 S	20 1/2	200	350

\*No. 8 is exactly the same as No. 7 except No. 8 has 10-inch long U-shaped wire on end instead of 5-inch long wire as on regular supports.

†Maximum diameter of sleeve.

## Reliable Cable Hangers

Cable hangers have proved that wear on cable sheath can be eliminated. Entire sheath is grounded solidly to messenger and grade clamp is not needed as cable does not creep on steepest grade.

Hanger is rust-proof and unusually neat in appearance. Maintenance cost of aerial cable is materially reduced and enclosure of entire cable and messenger with cable molding in trees is facilitated.

Zinc hangers are used for supporting lead-covered cable sheath to steel strand. Copper hangers are used for supporting insulated wires or cable to Copperweld strand.

Lgth. In.	Zinc		Copper		WIRE SIZE, INCHES

## National Aerial Cable Supports

Broad, flat smooth zinc strap of support, wrapped 3 times around cable in installation, assures maximum strength and permanence. Support wires applied so that they do not bind but slide easily, to assure flexibility as cable vibrates, expands, contracts or sways.

MAXIMUM SIZE CABLE, INCHES		Length Strap Inches	Lgth. Wire Support Inches	Stock No.	Approx. Ship. Wt. Lb. per 100

Shank.....	1 inches	2	1 1/8	2 1/8
Weight per 1000.....	pounds 85	95	180	190

## National C-B Knobs for Drop Wires

For use on buildings and in trees, C-B Knobs offer many advantages over the rigid knob or insulator.

The knob is hooked into the bridge ring and the drop is dead ended on the knob. When used in trees to prevent abrasion, the drop wire

is simply carried over the knob with a simple tie.

It makes no difference at what angle the drop wire approaches, as the knob provides a flexible and self-adjusting support, equalizing the strain and taking up all vibration.

No.....	190	191
Style.....	Single Groove	Double Groove
Shipping Wt. per 1000..lb.	250	250

## National Galvanized Bridle Rings

These rings are hot-dip galvanized, giving them high rust resistance.

They are a screw type ring, made to A.T.&T. standard, for running twisted pair, bridge, or parallel drop wire on building walls, fences, and poles.

Style.....	A	C	E	F

## No. 865 Diamond Style A Span Clamps For Suspended Cable

Used for taking off drop wire leads along the span.  
Also used for pull-offs to hold the cable away from trees, thus avoiding the use of tree guards.  
Can only be used with suspended cable.  
Plate is made of  $\frac{1}{8}$ -inch steel. Hooks are made of  $\frac{5}{16}$ -inch round, high tensile strength steel.  
All parts are hot-dipped galvanized after fabrication.  
Packed 100 to a carton.  
Shipping weight, 47 pounds.

No. 865.....per 100 \$25.00

## No. 866 Diamond Style B Span Clamps For Lashed Cable

Used for taking off drop wire leads along the span.  
Also used for pulloffs to hold the cable away from trees, thus avoiding the use of tree guards.  
Can be used for both lashed and suspended cable.  
Plate is made of  $\frac{1}{8}$ -inch steel. Hooks are made of  $\frac{5}{16}$ -inch round, high tensile strength steel. All parts are hot-dipped galvanized after fabrication. Packed 100 to carton.  
No. 866, Shipping Weight, 41 Pounds.....per 100 \$25.00

## National Drive Rings

Low cost, efficient, hammer drive rings for use where only a few pairs of wire are being run. Hot-dip galvanized. Made to A.T.&T. standard. Eye size,  $\frac{1}{2}$  inch. Length, 2 inches. Approximate shipping weight per 1000, 17 pounds.

O-B Dead-End Thimbles

No. 80425

No. 82825

Either thimble attaches directly to the eye or clevis of a suspension insulator and serves as a means for dead-ending or turning angles.  
Made of O-B Flecto-processed malleable iron, hot-dip galvanized.

No.	80425	82825
Ultimate Strength	7000	7000
Shipping Weight per 100	130	150

**Patented**

Has a seat for holding the neutral conductor, an eye on each side for dead-ending service wires, and a groove on the upper edge of the keeper piece for a ground wire or neutral secondary wire.

The portion of the main clamp casting through which the bolt passes is threaded.

## O-B Hook Bolt Strain Clamps

Figure 1

Figure 2

Designed primarily for use with copper conductors. Will develop slip strength in excess of the elastic limit of most cables which it will accommodate. Hook bolts need not be removed to install conductor. Merely turn out of the way before slipping cable into the conductor groove.

Body and fittings are made of O-B Flecto-processed malleable iron. Bolts and nuts are steel. All ferrous parts are hot-dip galvanized. Not furnished with liners.

### Conductor Accessories

#### Armor Rod Clip (V-Bolt Type)

Made of strong aluminum alloy. Can be placed over armor rods by removing only one nut from the V-bolt.

### No. 422 Reliable Flip-On Loop Clamps

For use in secondary deadending. Fastens Nos. 2 or 4 ACSR around spool or thimble. Easily installed, only one screw to tighten. Made of all-aluminum alloy. A long bell-mouthed contacting surface of soft aluminum grips the wire to its breaking strength without damage to the conductor.

Weight, 4 ounces.

No. 422 .....each

### No. 420 Reliable Snub Dead Ends

Accommodates Nos. 2 or 4 ACSR.

Made of high strength, non-corrosive aluminum alloy.

Spiral form carries the snub principle to full advantage to develop, approximately, the full strength of the conductor and to distribute the strain equally on all strands. It does not damage the conductor.

Easily installed. Light weight of clamp minimizes vibration fatigue strains, prolonging the life of the conductor.

Weight, 3/4 pound.

No. 420 .....each

### Twisting Joints for ACSR Cable

Each joint consists of two sleeves. The number specifies complete joint, i.e., two sleeves. For making this joint two twisting wrenches are required. In ordering them specify same number as joint. Joints are made of aluminum.

### Matthews Cable Clamps

Galvanized cable clamp for use on all copper power cables from 000 to 1,500,000 C.M. inclusive. Designed to do away with the need for costly splices, hazardous soldering operations and waste of costly cable, where power cable is used in industrial plants or on transmission cables, where strains do not exceed 1200 pounds. For a.c. cables, the No. 3 clamp has two of the carriage bolts, C, on one side, made of Everdur to break the magnetic field. When used on cables carrying d.c., the four carriage bolts, C, are made of hot galvanized steel. Steel clamping plates, A, B, and D, and the steel strain insulator bolt, E, are hot galvanized.

No. 2, Shipping Weight per 100, 400 Pounds....each \$3.60

No. 3, Shipping Weight per 100, 400 Pounds....each 4.60

Prices quoted are for small quantities. Write for quotations on large quantities.

**FWD Light Duty Earth Boring Units**

Complete construction-maintenance unit equipped with roomy platform body, single drum winch, earth boring machine with integral type derrick, fully enclosed drive, attractive coupe type cab, and other accessory equipment.

Ideal for large or small utility. Bores holes 16 to 20 inches in diameter, 7-feet deep.

Handles poles up to 45 feet in length.

**Specifications**

Gross vehicle weight, 17,000 pounds. Brake horsepower, 95 at 2800 revolutions per minute. Wheelbase, 144 inches. Tread, 69 inches. Tires, 8:25x20; duals rear.

Complete specifications and information furnished upon request.

**FWD Heavy Duty Earth Boring and Pole Setting Machines**

For Power Line Construction

For boring holes up to 56 inches in diameter, 12-feet deep through ice, frost, sandstone, shale, or any soil that can be dug by hand without blasting.

Features 180° turntable, derrick integral with borer, and power elevated boring tower. Write for Bulletin No. 452 for complete information.

## FWD All Steel Pick-Up Bodies

For large and small utilities. Ruggedly built to render years of satisfactory service.

### Model B6

For Mounting on Any  $\frac{1}{2}$ -Ton Chassis with Cab-to-Axle Dimension of Approximately 38 Inches.

Left Side View of Model B6 Body Showing Spacious Compartments and Ladder Racks in Forward Position

### Model B7

For mounting on All  $\frac{3}{4}$ -Ton Chassis with Cab-to-Axle Dimension of Approximately 50 Inches.

Right Side of Model B7 Body Showing Dust and Moisture Proof Compartments. All-Steel, Compact, and Practical

Rear View of Model B6 Body Showing Corrugated Floor Which Is Double Thick in Center to Insure Maximum Strength

Rear View. Body Has 30 Square Feet of Floor Space

Right Side of Model B6 Body. All Compartments are Weather Stripped; Dust and Moisture-proof

Left Side. Ladder Racks Shown in Forward Resting Position

### Specifications

Model B6 is of durable construction, built for long, economical service.

Length, 74 inches. Width, 67 inches. Floor width between compartments, 42 inches.

Weight, approximately 600 pounds.

### Specifications

Length, 84 inches. Width, 67 inches. Floor width between compartments, 42 inches.

Weight, approximately, 975 pounds.

**Complete Information and Prices Furnished upon Request**

## FWD Line Construction and Maintenance Units

With Utility Model U-10 All Steel Body

Model U-10 all steel body designed for large and small utility companies is highly adaptable for mounting winch, derrick, boring machine and other accessories. For mounting on all makes of trucks with a cab-to-axle dimension of approximately 84 inches.

This line construction and maintenance unit is furnished complete as shown.

### Body Specifications

Dimensions: length, 123½ inches; height, 78 inches; and width, 90 inches.

Winch compartment is 62 inches wide, and 20 inches high, and 24 inches deep.

Write for complete information and prices.

### Model 1417 Towing Hooks

For trucks up to 3½-ton capacity.

Attaches to frame of truck with braces to the side bars.

Has coil spring to cushion starting and stopping shocks.

Positive locking latch eliminates danger of uncoupling.

Weight, 48 pounds.

Prices upon request.

### Type L Draw Bars

For use with pole dinkey and light trucks. Attaches to wood pole and forms link for connecting to pintle hook on truck. Inside diameter of pintle eye ring, 2½ inches.

Weight, 31 pounds.

Prices upon request.

### No. L-12 Single Drum Winches 10,000-Pound Capacity

Modified version of the single drum winch, furnished without clutch or brake as winch must be power driven when pulling, raising or lowering load. Ideal for every purpose requiring pulling rope on a drum.

Automatic winch worm brake is standard equipment.

Drum measures 12 inches between flanges; holds 600 feet of  $\frac{1}{2}$ -inch steel cable. Weight, approximately 430 pounds.

### Model L-12-CD Single Drum Winches 10,000-Pound Capacity

Basically the same as Model L-12 winch except that it is equipped with clutch and brake and free spooling drum.

Automatic winch worm brake is standard.

Drum measures 12 inches between flanges; holds 600 feet of  $\frac{1}{2}$ -inch steel cable. Weight, approximately 516 pounds.

### Double Drum Winches Models WD-126 and WD-186

An exceptionally sturdy double drum winch. Large drum measures 18 inches between flanges; holds 909 feet of  $\frac{1}{2}$ -inch steel cable, and is furnished with clutch and brake.

Small drum, which may be operated independently, is available in 6-inch size. Large drum on Model WD-126 measures 12 inches; small drum measures 6 inches.

Automatic winch worm brake standard on both units. Weight, approximately 880 pounds.

### Model CR Collapsible Power Reels

Picks up loose wire in neat, compact roll. Attaches to winch by means of pin type socket.

Cast of aluminum.

### Pole Binders

A small winch with a ratchet type holding attachment. For all bulky loads.

Furnished with 18 feet of  $\frac{5}{16}$ -inch steel cable, carried on drum.

Weight, 18½ pounds.

### Model S Cable Splicer's Carts 1000-Pound Capacity

An all steel, compact, rugged, and theft-proof cart.

Compartments provide a place for every tool within easy reach of the splicer. A folding leg supports the front end of the cart when parked.

Dimensions: overall length, 74 inches; height, 41 inches; axle,  $1\frac{1}{4}$ -inch square; tread, 34 inches.

Has steel disc wheels; Timken bearings; tires 4:00x18, 4-ply.

Weight, 480 pounds.

### Model 1775 Pole Dinkies 1-Ton Capacity

For light construction or repair work.

Triangular shaped tongue is two 3-inch, 5-pound channel beams. Bolsters are cast steel. Overall length, 104 inches. Axle is heat treated, high carbon steel 2 inches square.

Tires, 6.00x16 singles 6-ply or 6.00x20 singles 6-ply. Tread, 56 inches.

Weight, 390 pounds.

### Winch Line Hooks

For attaching two wire rope lines as used on truck winches.

It attaches easily and quickly to a line or loop and holds firmly until the pole is set. Slack in the line then permits detaching from ground with pike pole.

As line must be threaded through derrick sheave a hook that detaches easily increases the efficiency of the line crew. Weight, 4½ pounds.

### Safety Hooks

Used with derrick and truck winch when raising derrick to operating position. Line is passed over spindle bar and threaded through the derrick sheave then attached to the safety hook. Winch power will then raise the derrick so it can be bolted in place by the linemen.

Hook is forged steel, designed so that the heaviest load is carried on the heavy section of the hook.

Weight, 3½ pounds.

Prices upon Request

## Utility Derricks Middle Type

Models M-35, M-40, M-45, and M-2870

Utility derricks have kept pace with modern telephone, telegraph, and electric light and power line construction and maintenance methods. Designed by A.T. & T., the world's largest user of pole derricks, their specifications are adhered to in every detail of manufacture. Utility derricks are standard equipment on the majority of Bell system line construction trucks.

**Model P8T Combination Cargo and Pole Trailers**

The most complete combination, dual purpose trailer thus far developed.

Available with or without fenders, side boards, pole carrying bolsters, load binders, brakes, or extension tongue.

Capacity from 4200 to 9800 pounds depending on tire size.

**Models M and H Heavy Duty Pole Trailers****3 and 5-Ton Capacities**

Exceptionally rugged. Built for hard usage and long trailer life.

Construction features include extension type tongue, adjustable cam locking uprights, heavy duty wheel bearings, and overall safety factors 50 per cent in excess of actual rated capacity.

**Combination Cable Reel and Pole Trailers****Models PCP and W-PCP**

An easily convertible cable reel and pole trailer. Converted by using simple hand tools.

Ideal for the utility whose requirements do not demand full-time use of two separate units. Model PCP handles cable reels from 34 to 38 inches and Model W-PCP, reels from 44 to 48 inches in width.

Furnished complete with set of bolsters, cam locking uprights, and cable reel saddles.

**No. 1485 Pole Dinkies**

All steel especially constructed for the exceptionally hard service of hauling poles. Wide tread permits high speed hauling when empty, without danger of it turning over. Tubular type axle gives maximum strength with least possible weight. Capacity, 3 to 4 tons.

**No. 1485-A Pole Dinkies**

For high speed hauling and rugged service. Has tubular tongue and axle to insure the greatest strength with a minimum of weight. Rear bunk balances trailer. Permits easier handling when empty. Capacity, 3 to 4 tons.

**Write for Complete Information and Prices**

## Powers Truck Bodies For Construction and General Maintenance Series 600

**Series 600C Line Construction and General Maintenance Body**

Designed for efficiency and crew comfort. Powers' engineering and experience in building line bodies for utilities is the assurance of well-designed, well-balanced equipment, properly arranged to carry all tools and supplies for construction and maintenance. In the Series 600C model, special attention has been given to crew accommodations. A roomy compartment in the forward part of the body seats 4 men, while 3 more ride in the truck cab.

Line construction bodies and all accessories are available as a complete package unit.

**Series 500**

Powers' makes a complete line of standardized bodies for construction and general maintenance service, each model designed and constructed to meet the most exacting requirements.

Series 500 embodies the latest improvements and conveniences suggested by utility engineers and operators. Standard equipment includes a winch and pole derrick. Body comes with either telescopic steel roof or open top with tarpaulin. Models available for all conventional or C.O.E. chassis.

All equipment is carried inside of body.

**Series 500 Line Construction and General Maintenance Body**

Ideal for all types of general service utility work—electric, gas, water, street light maintenance, and telephone. Standardized models also available for plumbing, heating, and other service contractors.

All models of the general service line are available with a 24-foot, two section extension ladder and hinged ladder rack assembly.

Cast aluminum fittings on ladder rack reduce overall weight and permit easy adjustment to fit equipment carried.

**Series 25M.** For  $\frac{1}{2}$ -ton chassis.

**Series 35M.** For  $\frac{3}{4}$ -ton chassis.

**Series 50M.** For  $\frac{1}{2}$ -ton chassis.

**Series 55M.** For  $\frac{1}{2}$ -ton chassis.

**Series 60M.** For  $\frac{3}{4}$ -ton chassis.

**Series 65M.** For  $\frac{3}{4}$ -ton chassis.

### General Service Bodies

**Series 25-M General Service Body**

**Complete Bulletins Furnished on Request**

### Powers Trailers For Utility Operation

Model AP-30

Designed to give long, trouble-free service under all conditions. Nos. A-20 (2-ton), A-30 (3-ton), and A-50 (5-ton), have their forward frame ends tapered to a forged

drawbar eye. This type trailer employs the center pole of the load as a tongue by attaching a drawbar clamp to the pole. The drawbar eye is used for pulling trailer when unloaded.

Models AP-30 (3-ton) and AP-50 (5-ton), have an adjustable tubular steel tongue which eliminates use of drawbar. The 5-ton unit, in both models (A-50 and AP-50), is equipped with 6-leaf helper springs. The total load of poles is carried on the trailer in all models, thus permitting loaded trailer to be handled behind any type of line construction body.

Each of the wide double channel bolsters is equipped with two tension type, adjustable slide cam locking stanchions, and center pole saddle.

The spring suspension and mounting of axle is designed to carry maximum loads and to take care of the added stresses of power brake application. Has 10-leaf main springs.

Cab controlled electric or hydraulic brakes are available.

### Duff-Norton Hy-Power Hydraulic Jacks

#### 3 to 50-Ton Capacities

No. 3H9

Used for industrial and rail-road service. Operates in both vertical and horizontal positions.

**3 to 12-Ton Sizes.** With extension screw which can be run up quickly by hand to load height, lifting starts with the first stroke of the lever bar. Heavily ribbed base is of one piece malleable iron with integral pump barrel.

**20 to 50-Ton Sizes.** With dual pumps. Speed pump brings head up to load position instantly, switchover to power pump is automatic without changing or missing a lever stroke. Base is of special alloy steel with armor plate steel guards to protect pump barrels.

Ram and cylinder are high carbon seamless steel tubing, accurately machined and ground to gages for close sliding fit. Lowering of load safely controlled at any speed.

## No. 55 Duff-Norton Pinion Pullers

Used to pull pinions, remove pulleys, small flywheels, etc. from shafts.

Also used for servicing bridge wheels and bearings of overhead cranes.

Pull is uniform around the entire periphery of the pinion. Worm and screw action effects a strong force.

Housing and jaws are electric-steel castings. Worm and screw are case hardened steel. Ball bearings throughout.

No. 55, Weight 50 pounds.....each \$120.00

## No. 500 Duff-Norton Genuine Barrett Pole Jacks

### Capacity, 15 Tons

For lifting, straightening or moving poles of all kinds. Eliminates the necessity of digging around stumps before moving or straightening.

Height, 37½ inches.

Raise, 23 inches.

Furnished complete with operating lever, 10 feet of ¾-inch chain and channel base.

Weight, 250 pounds.

No. 500, With Chain.....each \$110.00

No. 500, Without Chain.....each 99.50

## No. 529 Duff-Norton Small Pole Pulling Jacks Capacity, 5 Tons

Designed especially for lifting or moving small poles, such as are found on rural lines, quickly and easily. Has top lift and chain lift.

Poles are handled by means of the sling, which consists of a forged steel chain and hook. Chain fits into slot in top of jack.

Height, 28 inches. Raise, 18 inches.

Weight, 91 pounds.

No. 529, with Chain.....each \$68.00

No. 529, without Chain....each 65.75

Deduct \$1.00 for lever bar if not required.

## No. 1030-CR Duff-Norton Automatic Lowering Cable Reel Jacks With T Base—10-Ton Capacity

For heavy cable reels 20 to 84 inches in diameter, and for outside work where uneven ground conditions are encountered.

Attached to a T-frame base which has been sectioned to prevent warping. Top hook is for 3-inch diameter spindles, the two lower hooks for 2½-inch diameter spindles.

Height 30 inches. Raise, 14 inches.

Weight, 110 pounds

No. 1030-CR...each \$92.00

## Duff-Norton Screw Type Cable Reel Jacks 5-Ton Capacity

Used by utility companies. Reliable and efficient. To operate, lift the curved cap to the reel spindle, spin the 3-way nut down to the frame, and insert a ¾-inch steel bar in the 3-way nut and turn.

Lifting hook will accommodate up to 2¼-inch diameter spindles.

## Simplex Screw Type Reel or Drum Jacks

No. 1CR

No. 3CR

For economically handling heavy reels. Has one spindle cap for 2¼-inch spindles.

No. 1CR for reels 40 to 60 inches in diameter, No. 2CR for 60 to 92-inch reels. The 3-way nut makes it possible to operate easily and quickly.

No. 3CR for reels 50 to 84 inches in diameter, recommended for heavy duty field work. Braced T-base has area of 240 square inches. Has ratchet lever socket, 42-inch lever.

Simplex Reel or Drum Jacks  
5 and 10-Ton Capacities  
Ratchet Lowering

No. 320A

No. 322

Equipped with laminated, oil treated, oak bases.  
**No. 320A (5 Tons), Single Acting**—For warehouse and shop service. Handles reels from 20 to 60-inch diameters. Has 3 lifting hooks: 1 for 2½-inch and 2 for 2-inch spindles.

**No. 321 (10 Tons), Single Acting**—Also for warehouse and shop service, but handles reels from 20 to 96-inch diameters. Has 5 lifting hooks: 1 for 3½-inch, 1 for 3-inch, and 3 for 2½-inch spindles.

**No. 322 (10 Tons), Double Acting**—T shaped base with the 3-threaded and adjustable steel rods insures a non-rocking foundation for heavy outdoor service. Built with right and left hand bases; base area, 319 square inches. Handles reels from 36 to 84-inch diameters. Has 3 lifting hooks: 1 for 3-inch and 2 for 2½-inch spindles.

Simplex Pole Pulling and Pole  
Straightening Jacks

No. 329

For pulling or straightening telephone, telegraph, electric power and trolley poles quickly, without digging, and regardless of size or depth in the ground.

One or two men can pull or straighten poles, pull butts, or move loaded poles without interrupting service.

Nos. 325 and 329 are single acting and ratchet lowering.

No. 325 is a 5-ton jack, light, and durable, for pulling 25 and 30-foot poles, straightening poles, and for tightening guy lines. No. 329 is a 15-ton jack.

Standard equipment of the No. 325: a 4-foot steel pinch bar lever; 5-foot steel chain; an 8x15-inch steel channel base; 8-foot pike pole, equipped with a malleable iron forked cap for biting into wood for straightening poles. Standard equipment of the No. 329: an 8-foot scarf-welded BBB steel chain, fitted with pear-shaped link; a 10x24-inch I-beam base with hand hole; and a 5-foot steel lever bar.

## Simplex Util-A-Tools

This tool pushes objects apart on the drop forged and corrugated nut ends, or on pipes inserted in nut wells or on the spreading lugs.

It pulls together, using chains with the sky hooks, which are inserted in the nut holes, or on clamping lugs.

It lifts when the triangular snap-on base is attached. Pulls spoked or solid center wheels and gears by attaching the three-way chain base, centering the live center in the shaft after removing the nut and connecting the three chains with the base and object to be pulled.

Util-A-Tool clamps parts for welding or assembly; straightens bent objects; bends pipe and structural steel members; loosens and pulls frozen objects; tensions guy wires; holds down portable machines, etc.

18x8x8-Inch Steel Tool Box for Carrying Set....each	4.30
Complete Set with Tool Box; Weight, 78 Pounds.....each	56.00

\*The Nos. 612, 614, 616 or 618 may be substituted in the maintenance set (see prices above). The jacks may be purchased with any of the equipment.

Stud links (3), drop forged steel, heat treated, \$3.30.

## Simplex-Jenny Center Hole Hydraulic Pullers

Used for pulling stern tubes of ships, cylinder liners, pistons, valve seats, wrist pins, bushings, wheels, gears, propellers, boiler tubes, shafts, etc. Used in shipyards for pulling-in coupling bolts through propeller shaft flanges, assuring a tight fit. Also pushes, lifts, and can easily be rigged up to press.

Will stretch or part any mild steel rod that can fit through the center hole; alloy steel pull rods or puller stems are recommended.

Operates straight, vertically or horizontally without side thrust or self-binding friction and without need for any other equipment or rigging. Is its own back-up and is self-supporting because of its center hole construction.

Tubular ram is raised or pushed out by operating the pump. It is a self-contained unit made of tough, heat-treated steel throughout. Self-retracting when the release valve is opened reducing set-up time.

Drilled and tapped for pressure gauge which can be furnished when specified. This gauge accurately shows the tonnage developed and is useful in testing tensile strength.

**No. 303.** Single pump type used to pull cylinder liners, to form ship and boiler plates and to straighten out bulges in plates. Pulls bulkheads together, structural members or double bottoms for welding or riveting; eliminates use of impact wrenches, air hose. Pulls off bolts, pins, etc.

**No. 606.** Double pump type, high and low speed, can be operated separately, alternately or together. Designed for long and heavy pulls. Used in shipyards, mines, railroad shops, oil fields, construction and general industry. Also used for pulling in utility service pipe.

**No. 803 and No. 1003.** Single pump type. Used to pull bushings, cutless bearings, cylinder liners, pistons, wrist pins, valve seats, keys, wheels, sprockets, gears, boiler tubes, pipes, etc. In shipyards, used for pressing on and pulling off propellers. Length of lever, 19 inches.

Use only Simplex-Jenny Hydraulic Oil. (De-waxed—pour test minus 5°F.)

### No. 10010 Simplex-Jenny Center Hole Hydraulic Pullers

**Heavy Duty,** 100 ton, double pump unit is especially designed for pulling in the stern tubes of all types of ships. Is also used for heavy bushing jobs. Valve gears and pistons can be pulled from the largest sump or slush pumps in a fraction of the time required by old methods. Stern tubes are installed in hulls using two Simplex-Jenny center hole hydraulic pullers, with two 2-inch diameter alloy steel pull rods. Tonnage developed on these jobs ranges from 75 to 200 tons.

Length of lever, 19 inches.

A pressure gauge, calibrated in tons for direct reading, is furnished as standard equipment.

Lifting cap available.

Use only Simplex-Jenny Hydraulic Oil. (De-waxed—pour test minus 5°F.)

## Simplex Heavy Duty Hydraulic Jacks

3-Ton

8-Ton

30-Ton

Drop-forged cap and machined steel piston. Bases of 30, 50, and 100-ton jacks are of special analysis solid steel bar stock; other jacks have pressure tested malleable iron bases. All jacks except 20, 30, 50 and 100-ton have screw extensions. Length lever, 20 inches. Convenient carrying handle.

Nos. 30HJ, 50HJ, and 100HJ have high and low speed pumps arranged in tandem. Pumps can be operated singly or in unison. Double sockets for operation in close quarters.

Simplex Double Leverage Pipe Pushing and Pulling Jacks  
15 and 25-Ton Capacities

This jack is constructed with reversible carriages which eliminate the necessity of reversing the complete pipe pusher to pull pipe. Double levers and double track insure accurate and powerful pushing of pipe under paved streets, alleys, tracks, sidewalks, etc. Pipe can be pulled for lead pipe and duct installations, etc.

Equipment: one set of tapered jaws, one pilot, two 4-foot steel lever bars and two steel pipes for extending lever bars. Specify size of jaws and pilot required.

No. 125 Duff-Norton Pipe Forcing Jacks  
15-Ton Capacity

Used by many public service companies and contractors for laying water, gas, and other pipe in places difficult of access. Made of high carbon steel and steel castings. Will force pipe, from  $\frac{3}{4}$  to 4 inches, through favorable ground conditions from 60 to 300 feet. Trench, 9 feet long, required for operation of jack at starting point. Total length, 8 feet. Travel of cage, 7 feet.

No. 125; Weight, 292 Pounds.....each \$150.00

## No. 790 Greenlee Hydraulic Pipe Pushers

For underground installation in gas, electric, waterworks, telephone and other fields.

Eliminates tunneling, extensive trenching, back-filling and tamping, tearing up lawns, streets, sidewalks, railroad tracks, repaving.

Hydraulic unit does actual pushing, developing up to 75 tons piston pressure in large model.

One or two men can easily develop pressure needed to push pipe.

Unit is compact and simple to handle. Easy to carry and set up.

For  $\frac{3}{4}$  to 4-inch pipe, inclusive. Has six different operating speeds to match varying soil conditions, with pushing pressures ranging from 6,500 to 40,000 pounds. Greater speed for light soil, sufficient power for difficult soil conditions.

Power unit travels on notched steel base, supplied in 5 $\frac{1}{2}$ , 6 $\frac{1}{2}$ , 7 $\frac{1}{2}$  and 8 $\frac{1}{2}$ -foot lengths, permitting pushes of from 4 to 7 feet between changes of the pipe clamp. Each base is equipped with one backing plate and two pipe supports.

Weight of power unit only, 160 pounds.

No. 790, Power Unit Only.....each \$185.00

## Oshkosh Diggers

No. 2051

The blades are made of special alloy steel. Welding is used for attaching the blades instead of riveting, making a durable joint. The fulcrum members are of heavily constructed, channel-shaped, steel forgings.

There are two pivot points for the blades, one on each side. This gives much stronger leverage and greater durability.

Made in two types, with split handles or with two solid handles. The handles are made of straight grained hard wood, 8 feet long.

Measurement marks are placed on the handles so that the workman can easily determine the exact depth of the hole.

The diameter of the circle circumscribed by the digger blades is 6 inches.

No. 2050, Split Handle Type, Wt., 13 Pounds. each \$10.45  
No. 2051, Two Solid Handle Type, Wt., 14 $\frac{1}{2}$  Lb. each 10.45

## No. 10 Oshkosh Pike Pole Guards

For guarding the hazardous point on pike poles. Will fit either the 2-inch or  $2\frac{1}{2}$ -inch pike poles.

The guard works easily and fastens securely in either the guarded or open position. When in the unguarded position, the guard is completely out of the way, snugly fitted around the pole. When in the guarded position, it automatically locks in place and provides complete protection from the pike point.

Shipping weight,  $\frac{3}{4}$  pound.

No. 10.....each \$2.10

## Oshkosh Special Pike Pole Coating

Oshkosh Pike Poles finished with this specially developed coating prevent loss of time caused by splinters and splinters.

It gives a smooth, hard, transparent coating.

This coating keeps the grain from raising.

It is a non-conductor of electricity.

Can be applied at a slight additional charge.

## No. 740 Oshkosh Fir Deadman Wood Pole Supports

Of clear, straight grained fir. Measures 3x3 inches square,  $8\frac{1}{2}$  feet over all. Steel fork has three prongs.

No. 740, Weight, 40 Pounds.....each \$24.10

## Oshkosh Wood Mule Pole Supports

Made of Washington fir; 4 inches in diameter, tapers slightly to each end. Ends banded; with forged crucible steel fork in one end, pike in other end.

No.....	845	846	847
Each.....	\$23.25	24.10	26.30

## Leach E-Z-Up Pole Cradles

For lifting poles in position for framing.

Operated by one man without any lifting strain.

Uses the simple cam principle of rocking the pole off the ground and up.

Made of malleable iron.

To operate, place the cradle against the pole and drop the point of a cant hook or peavey between the two rockers. Then catch the hook in the opposite side of the pole, pull back on the handle.

The pole can be rotated in the saddle of the cradle by using the cant hook.

Each, Weight, approximately 26 pounds. \$25.00

## Oshkosh Malleable Socket Peavies

Socket, clamp, and toe ring of malleable iron. Duck bill hook and pike hammered out of crucible steel. Stop prevents hook from falling back onto handle.

## No. 902 Oshkosh Plain Pay-Out Reels

For gang mounting on a wagon when paying out several wires at one time.

Made of hardwood, braced and reinforced with sheet steel.

Reel pins adjustable for 12, 18, and 24-inch coils.

No. 902, Wt. 40 Lb.. each \$21.50

### Oshkosh Combination Pay-Out and Take-Up Reels

As a Pay-Out Reel

A pay-out and take-up reel, all in one. It is lightweight, yet strong and durably constructed. The frame is made of tubing. Easy portability; the guide pins fold flat so that the whole reel is compact and easy to carry or slide in truck.

The guide pins are easily and quickly adjustable to take any size coil of wire from 13 to 27 inches inside diameter, to 34 inches outside diameter.

The automatic brake is another feature. As the wire is pulled the brake releases and the wire pays out freely. The instant tension is released, the brake sets and any possibility of back-lashing is prevented.

For converting into a take-up reel 2 braces are furnished which hold the reel in an upright position. Hand crank attached for ease in taking up wire.

The carrier frame is removable so that the reel can be bolted to a truck. A thumb screw terminal is provided for grounding the reel.

Length overall, 63 inches; width, 34 inches; height overall (guides up), 13 $\frac{1}{4}$  inches; height overall (guides down) 8 $\frac{3}{4}$  inches.

Weight, 75 pounds.

Reel, Complete.....each \$100.00  
Reel, less Carrier Frame.....each 80.00

### No. 900 Oshkosh Barrow Reels

Heavy Western Union Type—With Guards

Used for heavy wire and heavy work.

Made of hardwood, braced and reinforced with steel. A wide bearing, together with a long pivot and sleeve, allow the reel to turn easily. Rests on strong, steel legs.

Reel pins adjustable for 12, 18, and 24-inch coils.

No. 900, Weight 80 Pounds.....each \$41.75  
No. 901, Extra Pins, Weight 4 Pounds...per set of 4 4.50

### No. 897 Oshkosh Folding Take-Up Reels

The reel part collapses and automatically throws off the coil at the same time and in an instant is ready for another coil. The frame, made of heavy hardwood, is strong and heavily reinforced throughout and folds up like a hinge.

Reel is made of malleable iron and steel.

It can be taken down in a moment merely pulling the pin out of the shaft, throwing off the coil and folding up the frame.

Take-up, 21 inches. Weight, 42 pounds.

No. 897.....each \$30.35

### Hubbard Wire Stringing Pulleys

Cadmium Plated

#### No. 1240 Pin Type

Designed to slip over the top of a 1 $\frac{1}{8}$  inch pin thread for pulling in and sagging conductors.

Sheave wheels are equipped with oil retaining bronze bushings.

Cast malleable with cadmium plate.

All surfaces are designed to prevent injury to pin threads or conductors.

Serves the same purpose as the pin type except that it is designed for attachment to disc or suspension insulators.

Clevis clearance is  $\frac{7}{8}$ -inch and wire capacity is 1 $\frac{1}{2}$  inch.

### Oshkosh Warning Signs

This warning sign is light in weight, yet durable. Legs are of  $\frac{1}{2}$ -inch high carbon steel. Has 1 $\frac{1}{4}$ -inch flange around edge of lettered side.

Has two hollow handles for adjusting angle of the legs. These handles also serve as flag sockets, and each is equipped with a lantern lock.

Black letters, 5 $\frac{1}{2}$  inches high, on traffic yellow background.

Height, 43 inches.

Width, 28 inches.

Thickness, 1 $\frac{1}{4}$  inches.

Size folded, 28x28x1 $\frac{1}{4}$  inches.

Weight, 23 pounds.

Warning Sign.....each \$11.60

### Coffing Flag Holders and Flags

**Flag Holder** is designed to fit all poles. Main body casting and locking handle are made of certified malleable iron. The chain wraps around the pole and hooks into main body of clamp.

Strong coil spring between chain and main body assures tension on locking chain.

**Flag** is made of 6-ounce army duck. Size, 12x16 inches. Has a 1x18-inch hardwood staff.

Flag Holder.....each \$2.40  
Flag.....each 1.15  
Flag Holder and Flag.....each 2.55

## Leach Portable Folding Barricade

A strong, substantial barricade, exceptionally neat in appearance and efficient in operation. Easily and quickly taken down and folded into a small, compact bundle. Stacks easily and safely and takes up only a small space in truck or warehouse.

To quickly set up, open the legs, latch the cross-piece, put in the cross-rail and turn the handle.

The cross-rail is held like a piece of wood in a vise which allows the use of various thicknesses of wood from 1 to 3 inches.

Jaws are not equipped with teeth, thus, they do not chew up the wood cross-rails.

Equipped with extension swivel which is used to erect a square barricade.

Features a flag socket in the screw handle which is  $4\frac{1}{2}$  inches deep to hold a danger or warning flag.

Furnished with a latern lock welded to the screw handle. Orange finish.

Larger size specifications upon request.

Four-strand weights about 7 per cent more than 3 strand.

### Oshkosh Safety Extension Ladders

A lightweight, safety extension ladder designed expressly for public utilities.

Equipped with an automatic safety lock or latch. This lock is so arranged that when pulling on the raising rope, the lock is lifted out of position. The instant the strain on the rope is slackened, the lock drops in place. In lowering, the extension must be lowered slowly. It cannot accidentally drop.

The side rails are made from straight grained, properly seasoned aeroplane spruce.

The rungs are made from tough mountain hickory, straight grained. Each rung has a shouldered tenon joint which is pressed tightly into the side rails, assuring a safe, tight fit. The side rails of each section are connected at top, middle, and bottom with steel tie-rods. This combination makes a rugged, durable construction. Either section can be used separately as an individual ladder, both being equipped with safety tips and pikes.

Other safety features include corrugated rubber tips, transparent safety finish, safety pole-grippers, and rubber guarded safety pikes. All metal parts are parkerized. Furnished in full range of lengths in multiples of 2 feet.

Weight, 2 pounds per foot, average.

Lgth. Feet	Each	Lgth. Feet	Each
16	\$29.60	32	\$59.20
18	33.30	34	62.90

22	40.70	38	70.30
24	44.40	40	74.00
26	48.10	42	77.70
28	51.80	44	81.40
30	55.50	46	85.10

### Oshkosh Sectional Ladders

Each section is 6 feet long, making a handy ladder to have around for miscellaneous uses where a long extension ladder is larger than the need requires.

For small service trucks, one or two of these sections can be hooked on and carried around all the time so that a ladder is always handy for emergency use.

The sections join together interchangeably, lapping 1 foot. One section fits into the other at either end as shown in the illustration. The joint is stiff, solid and secure.

Outside width of top, 16½ inches; inside width of bottom, 17 inches; rungs diameter, 1½ inches; size rails, 1½x2¾ inches.

Section Which Fits Into End

Side rails are selected aeroplane spruce; rungs are straight grained mountain hickory; metals, Parkerized steel.

Special transparent finish.

Rubber pikes at bottom, on special order.

Weight per running foot, 2 pounds.

Per Section .....\$9.30

### Babcock Mechanics' Step Ladders

Used by mechanics, electricians, carpenters, painters and masons.

Each step is reinforced by a strong steel rod under step with block in center, forming a truss rod and equipped with strong and durable hinges or ears, securely riveted.

Made of clear stock: 1½-inch hickory rungs. Front, ¾x3 inches; back legs, 1½x2½ inches; steps, ¾x3¾ inches.

Furnished with bucket shelf.

Lengths, 4, 5, 6, 7, 8, 10, 12, 14 and 16 feet.

Prices upon application.

### Safety Step Ladders

Especially designed for heavy work. Made from 1¼-inch stock, well braced, every step reinforced. All parts heavily riveted. The back is equipped with oval oak bars. The hinges and spreaders are of 1¼-inch iron.

Front, 1½x3¾ inches; back bars, ¾x1¾ inches; back legs, 1½x2½ inches; steps, 1x¾ inches.

Made of air dried stock in lengths of 4 to 22 feet.

## No. 777 Bartlett Two-Hand Pruners

Due to the fact that the majority of men are right-handed, the blade has been placed on the opposite side than is the general custom. This permits the blade to be placed next to the body or main limb of the tree with hook handle held in left hand, while the right hand operates the blade.

Hook remains stationary while blade closes, instead of blade being held stationary while hook closes by twisting around the branch, wounding the bark.

Blade positively will not cut or dig into the hook. By dropping the hook considerably below the center line, a superior positive draw cut has been produced, with an opening between blade and hook, allowing a straight thrust at the branch.

Both blade and hook are hardened drop forged crucible tool steel. Has white ash handle.

26-Inch Handle with 10-Inch Strap Ferrule.....each \$5.00  
26-Inch Handle with 4½-Inch Plain Ferrule.....each 4.75

## Porter Foresters

No. 2 is recommended as a forestry tool for pine pruning and rust control.

No. 3 cuts hardwood such as oak, maple and beech; for reforestation work such as brush cutting, trail clearing, etc.

Has slide shift 3-power slot which provides great extra power in the middle of a difficult cut. Edges are protected when handles are closed. All parts heat treated; fully interchangeable. Cuts clean, no damage to bark.

No. 2	2	3
Each.....	\$8.50	9.75
Length.....	inches 27	34
Capacity Cut.....	inches 1½	2
Weight.....	pounds 4½	7¼

## No. 114 Bartlett Utility Rapid Cut Saws

Cuts very fast. Teeth are diamond point with a well-shaped raker. Handle has an extra large grip permitting gloves and is comfortably shaped for the hand.

Can be obtained with or without the automatic on and off belt snap.

Use 6-inch safeback cant file.

Length, blade, 26 inches.

No. 114, with Snap.....	each \$5.50
Without Snap.....	each 5.00
Extra Snaps, Complete.....	each .50

## No. 41 Bartlett Utility Saws

Used by utility companies. Will sever the largest branches. Extra large, special handle.

Tuttle tooth blade.

Length Blade.....	inches 20	24
No. 41.....	each \$3.25	3.50

## No. 114BD Bartlett Utility Pruning Saws

For fast cutting. Has diamond point teeth with well-shaped raker. Special handle. Length of blade, 24 inches.

No. 114BD, without Snap.....each \$4.50

## Seymour Smith Tree Pruner

No. 111

No. 111.—Cuts 1-inch diameter branches. It is a lightweight, powerful, general purpose pruner for light trimming and line clearing along electric light, power and telephone wires.

No. 12

No. 12.—Easily cuts 1½-inch diameter branches. Especially designed for electric light, power and telephone line clearing. Will stand up and give long efficient service under the hardest use and even abuse.

Furnished complete with rope and 18-foot wood pole.

## Complete Pruner

## No. 1-W Bartlett Pulley Type Tree Trimmers

A very powerful cutting tool.

It not only has the compound lever, but it also has double leverage due to the pulley which is attached to the curved lever.

Will sever any branch up to 1¼-inch diameter, and the pulley enables the operator to pull the rope at any angle. A special coil spring positively returns the blade to a full cutting position.

An important feature of this tree trimmer is the light weight, the head complete weighing only 1¾ pounds.

All poles have two coats of waterproof shellac to prevent moisture absorption.

Furnished with 1¼x1½-inch rectangular poles, one piece poles or short sections joined together with No. 156 brass sleeves which have a positive locking device.

### With Rectangular Pole and No. P156-2 Ferrule

4-Foot Length.....each	\$8.85
6-Foot Length.....each	9.35
8-Foot Length.....each	9.85
10-Foot Length.....each	10.35
12-Foot Length.....each	10.85
14-Foot Length.....each	11.45
16-Foot Length.....each	12.05
No. 1-W Head Complete with Pulley.....each	6.00

### Extra Rectangular Sections, With No. 156-1 and 2 Body and Ferrule

4-Foot Length.....each	\$3.50
6-Foot Length.....each	4.20
8-Foot Length.....each	4.90
10-Foot Length.....each	5.60

Six and 8-foot octagon poles with round sleeves are obtainable if desired.

## No. 44 Bartlett Pole Saws

For large limbs.

Has 16-inch peg tooth blade with 7 teeth per inch. Saw is securely held by the head, which is stamped from stiff cold rolled steel and fastened to the pole by three bolts.

Head is made of two strips of steel riveted together so as to secure a truss shaped support for the blade, which is fastened between the two sides. Hook serves as a means for hanging the tool on a limb when not in use.

Saw can be adjusted to three angles to suit operator's position and the blade is ground for clearance, which prevents binding.

File blade with No. 395 cant file.

Furnished without ferrule.

Size pole, 1¼x1½ inches.

4-Foot Length.....each	\$6.20
6-Foot Length.....each	6.60
8-Foot Length.....each	7.00
10-Foot Length.....each	7.40
12-Foot Length.....each	7.80
14-Foot Length.....each	8.20
16-Foot Length.....each	8.60

Paint brush clip will be attached to side of pole near head at 50 cents extra when desired.

No. P156-2 ferrule attached at 50 cents each, when extra sections are ordered.

## Bartlett Combination Pruners and Saws

### Octagon Poles

This combination has two separate tools for head sections, mounted on short pieces of 1¼-inch octagon sitka spruce poles, with No. 146-2 round ferrule attached to the lower end and extra 6 or 8-foot octagon section fitted with round brass sleeve body which engages the ferrule and locks securely.

Combination makes it possible to use either head with same handle section, and several intermediate lengths can be added if desired.

For convenience in shipping, head sections may be ordered without extra sections if desired.

No. 1-WE, 30-Inch Head Section, Wt., 2¾ Lb....each	\$6.90
No. 44WE, 30-Inch Head Section, Wt., 1½ Lb....each	5.20
8-Ft. Intermediate Section with No. 146-1 and 2 Body and Ferrule.....each	4.90
8-Ft. Handle Section with No. 146-1 Sleeve Body.....each	4.25
No. 146-1 Sleeve Body, Complete.....each	1.45
No. 146-2 Sleeve Ferrule.....each	.65

## No. 50 Bartlett Safety Back Pole Saws

Constructed to give the maximum amount of safety possible in hazardous work.

Bent wood back tapers from standard size pole to a narrow point which enables the user to operate the saw in close crotches.

In order to make the cutting most effective the cutting head has been designed so that the blade can be turned to three positions by simply loosening the thumb nut and turning the knurled holder until the pin drops into the desired position, then again tightening the thumb nut with the lower pin in a position corresponding to the upper end.

Steel blade is 36 inches long and ⅞ inch wide, having a draw cut of 5 points per inch, and will cut with great rapidity.

Saw has a cutting capacity of 5 inches.

File blade with No. 390 slim file.

5-Ft. Top Section with Blade and No. 156-2 Ferrule.....each	\$9.40
4-Ft. Section with Sleeve Body.....each	2.85
6-Ft. Section with Sleeve Body.....each	3.55
8-Ft. Section with Sleeve Body.....each	4.25
10-Ft. Section with Sleeve Body.....each	4.95

## Newman Curved Type Tree Saws

Designed for cutting limbs over 1½ inches in diameter, and where blade with slight curve is required.

Adjustable to three angles.

Blade is long and is ground for clearance to prevent binding.

Separate extension handles may be used or the extension handles on Nos. 700, 800, and 900 trimmers may be used.

Overall length of saw and ferrule equipped handle, 6½ feet. Weight, 3¾ pounds.

No. 1300, for 1½-Inch Pole.....each	\$7.20
No. 1300A, for 1¼-Inch Pole.....each	7.20

## Newman Swedish Steel Tree Saws

Designed for cutting limbs up to 4 inches in diameter. By undercutting, limbs up to 8 inches in diameter can be cut. Saw cuts on the draw, thus giving maximum ease of operation. Long blade, 35½ in. in length. Overall length, 4 ft. No. 1200, for 1½-Inch Pole.....each \$10.50  
No. 1200A, for 1¼-Inch Pole.....each 10.50

## Newman Heavy Duty Tree Trimmers

Will cut 1½-inch tree limbs because the knife shears down from the top. Gravity spreads the cut behind the knife; and wedging or choking is eliminated.

Trimmer is hung on the limb and the cut made by pulling the rope. High-powered leverage is provided by compound toggle lever and double pulleys. A broad ½-inch anvil base, against which the blade cuts, holds the tool in alignment with the limb so there is no side stress on the cutter.

Cutter head parts is aluminum heat treated alloy casting. The cutting blade itself is made of high chrome, high carbon tool steel carefully tempered for maximum strength. Metal parts are rust resistant plated.

No. 900, with 1½-Inch Pole and Multiple Pulley Action; Complete with Two 5-Foot Sections, 10 Feet Overall; Weight, 6½ Pounds.....each \$13.45

No. 975, Additional Center Section; 5 Feet Long; 1½ Inches Diameter; Weight 2 Pounds.....each 2.75

## No. 915 Oshkosh Tree Trimmers

This trimmer has positive locking ferrules.

Head is made of two pieces of light forged steel, reinforced and riveted together. These sides act as a guide for the thin saw steel cutting blade. Blade is pivoted and starts cutting with a slicing motion the moment the rope is pulled. Cuts limbs up to 1½ inches in diameter.

Handle is made in three sections of 1½-inch diameter straight-grained, clear Washington fir. One 6-foot section is attached to head and two 7-foot lengths; all equipped with couplings. Furnished complete with handle and a short section of rope to which can easily be attached any kind and size of rope. One-half-inch rope is suggested for best results.

No. 915, Trimmer, less Rope. Wt. 13 Lb.....each \$17.95

No. 915B, Extra Blade. Wt. 10 Oz.....each 4.75

No. 915S, Extra Spring. Wt. 2 Oz.....each .85

No. 915EM, Extra 7-Ft. Middle Ext. Wt. 4 Lb.....each 5.45

No. 915EE, Extra 7-Ft. End Extension. Wt. 4 Lb.....each 4.00

No. 915R, 20-Foot Rope with Connector. Wt. 4 Oz.....each 3.30

## No. 916 Oshkosh Tree Saws

Saw blade is strong, thin, and has fine teeth. It cuts clean. Blade is fastened in the frame.

Steel frame has hook for hanging saw in tree. The 6-inch handle has a ferrule on bottom to which can be connected the regular extensions of the trimmer.

No. 916, Saw. Weight 5 Pounds.....each \$10.90

No. 916B, Extra Blade. Weight 4 Ounces.....each 2.65

No. 916T, Extra Tightener. Weight 4 Ounces.....each 2.15

## No. 1000 Newman Longrange Wire Cutters

For Overhead Wires

Used to cut wires overhead where manual applied energy is at a minimum and where the operator must dodge a falling wire after it has been cut.

Cuts energized or cold lines and cables by the hot stick method with extensions.

Ideal for holding, leading or wrapping hot lines overhead at a safe distance.

Jaw opening of 1½ inches permits cutting or cleaning of wire in conduit.

Circular cutting action of jaw gives a smooth cut.

Handles are tested for 75,000 volts as is operating rope.

Insulating materials will not gum jaws.

Overall length, 4 feet.

Additional 4-foot extensions are available.

Weight, 6 pounds.

No. 1000.....each \$25.00

No. 1050, Replacement Blade, Wt., ½ Lb.....each 5.00

No. 925, Replacement Spring, Wt., 2 Ounces.....each .30

No. 1085, 5-Foot End Ext. Handle, Wt. 1¾ Lb.....each 5.00

## No. 700 Newman Featherweight Tree Trimmers

Used for topping or work in the tree.

Cuts limbs and branches up to 1 inch in diameter.

Has single action pulley design.

All pulleys are ball bearing for easier operation.

Overall length, 10 feet.

Handle diameter, 1¼ inches.

No. 700, Weight, 4¾ Pounds.....each \$9.50

### Accessories

No. 750, Replacement Blade.....each \$2.75

No. 875, Center Extension Handle.....each 2.75

No. 885, End Extension Handle.....each 2.75

## No. 800 Newman Bantamweight Tree Trimmers

For trimming limbs and branches from trees. Also light enough for horizontal use in the tree.

Cutting capacity, 1 inch.

Overall length, 10 feet consisting of a 5-foot head or cutting section, 5-foot end extension. For longer use, a 5-foot center extension is available.

All pulleys are ball bearing for easier operation.

Handle diameter, 1¼ inches.

No. 800, Weight, 5¼ Pounds.....each \$12.50

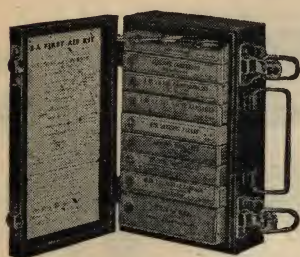

### Accessories

No. 750, Replacement Blade.....each \$2.75

No. 875, Center Extension Handle.....each 2.75

No. 855, End Extension Handle.....each 2.75

**No. 12035 M.S.A. 10-Unit All Weather First Aid Kits**

Contains complete assortment of first aid materials in standard Type D packages of unit size or multiples of unit size.

Kit case is weatherproof, dustproof, and is strongly made of welded heavy gage steel.

Each dressing is complete in itself, sterilized and sealed, with sufficient material for a single treatment.

Liquids are hermetically sealed in ampoules or vials to prevent leakage. Unit packages fit like blocks in case to simplify refilling.

Furnished with mounting brackets.

**Contents:** 1 package, 4-inch compress bandage; 1 package 2-inch compress bandage; 2 packages 1-inch adhesive bandage; 1 package Foille for burns; 1 package Iodine brushes; 1 package Ammonia inhalants; 1 package 40-inch triangular bandage; 1 package tourniquet and forceps.

**No. 12037 M.S.A. 24-Unit All Weather First Aid Kits**

Contains complete assortment of first aid materials in standard Type D packages in unit size or multiples of unit size.

Kit case is weatherproof, dustproof, and is strongly made of welded heavy gage steel.

Each dressing is complete in itself, sterilized and sealed, with sufficient material for a single treatment.

Liquids are hermetically sealed in ampoules or vials to prevent leakage. Unit packages fit like blocks in case to simplify refilling.

Furnished with mounting brackets.

**Contents:** 3 packages 4-inch compress bandage; 3 packages 2-inch compress bandage; 3 packages 1-inch adhesive compresses; 2 packages 40-inch triangular bandage; 2 packages Foille for burns; 2 packages absorbent gauze compress; 2 packages Iodine brushes; 1 package Ammonia inhalants; 1 package Ammonia ampoules; 1 package wire splint; 1 package 4-inch gauze bandage; 1 package paper cups; 1 package tourniquet and forceps.

**No. FA-2294 M.S.A. Pocket First Aid Packets**

Contains a handy assortment of first aid materials for minor injuries, arranged in a metal box small enough to fit in the pocket.

Contents include ammonia inhalants, iodine applicator, adhesive compresses, compress bandages, and Foille for burns.

**No. FA-12619 M.S.A. Snake Bite Outfits**

Consists of a plastic suction syringe for removing venom by suction, lancet for enlarging wound, U. S. Army tourniquet, Iodine ampoule for painting wound, Ammonia inhalant, and paper cup. All contained in a sturdy plastic case.

Furnished in 1½-unit Type D package with instructions.

**No. FA-2682 M.S.A. Poison Ivy Wash**

Type D package of six 4 c.c. vials.

When applied in early stages, effectively relieves irritation and dries up inflammation.

**No. FA-2604 Creosote-Burn Wash**

Type D package of six 4 c.c. vials for effective treatment of burns or irritations of the skin caused by contact with creosote from line poles, ties, and creosoted timber.

**No. FB-12560 Foille for Burns**

Modern burn treatment for emergency and hospital use.

May be applied directly to injured area at scene of accident; does not require removal when treatment is continued by physician. Provides quicker emergency aid with marked control of pain and resultant shock.

Rapidly anesthetizes injured tissues with characteristic absence of infection.

Aids rapid healing, lessens contractures, and reduces scarring.

Type D package contains two ⅝-ounce tubes with instructions on package.

Available in emulsion or ointment. Also available in larger packages.

**Dillon Temperometers**

Used for obtaining temperatures of paraffin, compounds, wiping solder, impregnation wax, cable damming waxes, etc. Has large, easy to read dial and convenient handle.

Dimensions: dial diameter, 2½ inches; length of handle, 5½ inches; size of tube, ¾ inches; overall length, 9 inches. Weight, 11 ounces.

Each..... \$6.00

## Dillon Bisectors

Used to locate correct anchor positions for poles and to read the pull needed. Registers interior corner angle degrees.

Dimensions: length,  $8\frac{3}{4}$  inches; width,  $\frac{5}{8}$  inches; depth  $1\frac{1}{8}$  inches. Weight, 5 ounces. Shipping weight, 14 ounces. Each..... \$4.95

## Type CW Matthews Teleheights

Used by central stations, telephone and telegraph companies to secure height of poles, trees, etc. Used for figuring cubical contents of buildings, clearance of bridges, highlines, etc.

To find height A, stand away from A until bubble and line cross each other. Then measure off distance CD and add distance CB. The sum will equal DA.

Furnished with leather carrying case. Length, 5 inches. Type CW.....each \$24.00

## Type L Matthews Woodpecker Telefaults

Used on telephone, telegraph, signal and certain other cables.

A self-contained instrument that will locate water, shorts of all kinds, crosses, grounds, split pairs—every kind of cable trouble except opens.

Uses one dry cell battery. Maximum voltage, under 5. No batteries furnished.

Cannot be confused with other inductive noises—has a tone like a woodpecker on a pole.

Type L, Complete with Coil, Cord, and Receiver, Weight 9 Pounds.....each \$130.00  
Extra Exploring Coils.....each 32.00  
Extra Receivers.....each 14.00

## Model A Dillon Cable Testers and Locators

### Combined

Used to locate where a cable or pipe is buried at and to determine at which depth cable or pipe is buried.

Locates the exact path that a service pipe or cable takes to reach any building and position of a water main in street or alley.

Has a lamp circuit for checking all connections after the test has been set up.

Especially valuable for checking depth of cable at river crossings or for determining whether or not a service pipe is below frost line after a street has been lowered or regraded.

Furnished with detector coil and neutral exploring coil. Built-in level in coil enables the operator to maintain absolute level for accuracy.

Dimensions:  $11\frac{1}{4} \times 7\frac{1}{2} \times 12\frac{1}{2}$  inches.

Weight,  $21\frac{1}{2}$  pounds.

Shipping weight, 23 pounds.

Model A.....each \$76.00

## Dillon Model AN Dynamometers

An instrument of the traction type which is used for the determination of strain and adapted for a wide variety of uses where traction or pull is to be measured.

The force of the pull, passed through the instrument causes a de-

formation which is indirectly proportional to the load and which is measured by mechanical means.

Operates on the basic scientific principle of the bending of a beam from a true straight line. The beam in this case consists of a solid bar of special alloy steel, heat treated and properly aged to prevent later "growth". Drilled slightly off axial center at each end of the beam is a hole through which shackle is passed. As load is applied to these off center holes, the beam is slightly deformed. This deformation is accurately indicated by a gage movement and amounts to only forty-thousandths of an inch for a full scale 360 degree reading.

Readings are direct for the exerted force is translated directly into pounds on the face of the dial.

Dimensions:  $8\frac{1}{4} \times 6\frac{1}{4} \times 3$  inches.

Weight: with shackles, and carrying case,  $11\frac{1}{6}$  pounds; without shackles and carrying case,  $5\frac{5}{8}$  pounds; shipping weight, 14 pounds.

20,000-Pound Capacity (250-Pound Divisions).....each	\$175.00

### Cable Spinning Equipment

The following list of equipment was designed to support and maintain aerial cable and wires to steel supporting strand by the spinner method, which consists of spiraling a wire of suitable size and material around the wires or cable to be supported and the supporting strand. This method has proved its worth and has been adopted as standard practice.

#### No. 300 Neale Model D Spinners and Chests Pull Type

Designed for use by a construction gang to place and spin new cable or maintenance spinning of existing cable. Operates on 10 ball bearing surfaces.

Adjustable to take cable from 11 pair, 26 gage to the maximum size 909 pair, 24 gage, sheath diameter 2¼ inches.

Ring pusher is removable. Wire supply is always visible.

Will operate with either .091 or .061-inch spinning wire.

A ratchet on the strand wheel prevents slack in the spinning wire when pull on tow line is released.

Length, 24 in. Diameter, 10 in. Weight, 42 pounds.

Furnished with one lashing wire clamp.

Packed in a durable chest made of ¾-inch plywood reinforced with metal on all edges and corners. Weight of chest empty, 33 pounds.

#### No. 100 Neale Model B Spinners and Chests

A one-man machine to place and spin new cable or for maintenance spinning of existing cable. Operated either by a hand crank or may be pulled along the supporting strand by a man on the ground. A dead weight of 50 to 100 pounds can be substituted for a rider in order to prevent slippage.

The two supporting trolley wheels are connected together by means of a bicycle chain. A removable gate is provided in the spinner head, which permits the spinner to be placed over strand and cable at the beginning of a span and readily removed when the next pole is reached. Has ball bearings at all points of wear. Frame is made of steel tubing. Chain drive is geared for upgrades.

Wire is carried on an aluminum reel which holds approximately 325 feet of wire.

Furnished with three sets of rollers to accommodate different sizes of cable. Equipment includes spinner chest, seat and safety belt, one tube of grease, and one spinning wire clamp. All metal parts not aluminum or bronze are cadmium plated.

Packed in a durable chest made of ½-inch plywood reinforced with metal on all edges and corners. Weight of chest empty, 53 pounds.

## Cable Spinning Equipment

No. HB3

**No. HB3 S&S Hand Line Block** is a tool especially designed for spun cable but is also used on cable supported by other methods. It clamps on the strand without damage to the cable and will not slip on a grade. No wrench is needed. Made of bronze alloy. Length, 10 inches. Weight, 4 pounds.

No. LC5

**No. LC5 Neale Spinning Wire Clamp** is a positive action clamp to hold the spinning wire in place when terminating at the pole and to keep the slack from running back when repairing cable. Made of bronze alloy with cadmium plated screw. Length closed,  $3\frac{1}{4}$  inches. Length open,  $4\frac{1}{2}$  inches. Weight, 1 pound.

## No. 27 Chance Rubber Wheel Flexible Safety Cable Car

This car can be collapsed, strapped or tied for convenient transportation. Adjustable up or down, by snaps and chain. Chain is made of steel, electric welded on sides of links to guard against weld opening. Snaps used are linemen's snaps of drop forged, galvanized steel.

Holes are provided in open side of car frame for snapping on safety belt.

Car is equipped with hand brake to hold chair stationary.

Seat is made of high grade fir lumber, reinforced with

strap steel imbedded in wood.

Width, 21 inches. Weight packed, 27 pounds.

No. 27.....each ....

## No. 600 Peirce Lineman's Safety Platforms

PATENTED

Used for connecting transformers, making up cable joints, replacing and washing hi-line insulators, and soldering joints.

Width,  $9\frac{3}{8}$  inches. Length, 71 inches.

No. 600. Ship. Wt. Each, 50 Pounds....per 100 \$11,494.31

## Hubbard Pole Seats

Hot Galvanized

Will support more than three fourths of a ton safely.

The frames and braces of all sizes are of  $1\frac{1}{2}$  inch channel steel, except No. 9030, which is constructed of  $\frac{1}{8}$ -inch round steel.

The wood seats are  $1\frac{1}{8}$ -inch cypress, boiled in creosote. The bars of the all-steel seats are  $\frac{3}{8}$ -inch square steel, secured to frame in such a manner as to leave no projecting ends. There is no strain on riveted joints. Bars are placed with corners up to prevent slipping.

No. 751

No. 757

## Hubbard Pole Balconies

Hot Galvanized

No. 9035

Used for convenience and comfort in telephone terminal box work and serves as switching platform with power companies.

Frame, braces and guard rails of No. 9035 are made of open hearth steel, galvanized by hot-dip process. Wooden platform is of thoroughly seasoned oak, painted with two coats of standard green pole paint.

Nos. 9035 and 9045 are identical except that the railing on No. 9035 fastens to a telephone terminal box and the railing on No. 9045 fastens to the pole.

Upright braces are  $1\frac{1}{2}$ x $1\frac{1}{2}$ x $\frac{3}{16}$  inch steel; the platform supports,  $1\frac{3}{4}$ x $1\frac{3}{4}$ x $\frac{3}{16}$  inch angle steel; and the guard rail of  $1\frac{1}{4}$  inch flat steel.

The complete balcony includes all bolts for fastening parts together but not the bolts for attaching to pole.

## Chance Economy Platforms

Used wherever a board of 24 or 30 inches in length is required or where maximum economy is desired.

Easily attached to pole by a single chain tightener. There is no brace pole, the board being fully supported by its mounting bracket.

Recommended for use where working space is limited.

Will support the weight of one man. Has been tested to loads up to 850 pounds.

On towers, blocks should be placed under the chain on the inside of the tower leg angle in order to give the chain a firm grip.

Top of board finished with grip tread.

No.	Each	Length Inches	Rated Strength Pounds	Weight Pounds

\*Without rope.

Coffing Safety-Pull Ratchet Lever Hoists  
\*With Single Locking Pawl

Nos. AG, FG

Nos. ATG, FTG

No. ZG

A safe and fast ratchet lever hoist. Equipped with a dual ratchet and pawl assembly, independent of each other, therefore the load is always under control. There is no clutch to slip and the hoist cannot drop its load.

Because of its adaptability to all types of work where a full stroke of the handle is permitted this single pawl hoist is the choice of most light and power and telephone construction and maintenance crews. Can be used for lifting or pulling.

Has side lever for positive up or down and a neutral position for automatic safety control, making hoist easy to operate. Has free chain feature, that is, when there is no load on hoist a slight pressure on thumb latch on side of lever allows load chain to be pulled through hoist, either up or down, without operating lever.

Malleable iron safety-valve handle will bend at maximum overload before chain will break or hooks will straighten out. Reversible handle. Safety stops prevent handle from spinning in case operator's hand should slip off handle.

All Safety Pull hoists are factory tested at 100 percent over their rated capacity.

Nos. ATG, FTG and ZG hoists are readily converted by unsnapping the special snap hook from connecting link at bottom of hoist and allowing snap hook to act as a lug, preventing end of chain from passing through the super block.

No.	Each	Extra Lift per Foot	Rated between Cap. Hooks Tons	Min. Dist. between Hooks In.	Lift Speed per Min. In.	Lb. on Lever to Lift Rated Cap.	Std. Lift Inches	Wt. Lb.

WG15	330.00	18.00	15	30	6	124	60	150

\*If wanted with intermediate locking pawl, add \$5.50 to list.

NOTE. By attaching a special iron block, called a super attachment, to Nos. AG or FG along with 5 feet of chain, to keep the standard 5-foot lift, they can be converted into double their rated lifting capacities. Super attachment for No. AG, \$5.55; for No. FG, \$7.20.

## Coffing Quik-Lift Electric Hoists

Standard Lift, 8 Feet

With Hook Suspension

With Trolley Suspension

Heavy duty motor, ball bearing, high starting torque. Can be plugged into any a-c or d-c circuit. Fool-proof safety limit switches automatically stop operation of hoist.

Hoist with trolley suspension has Hyatt roller bearings. Furnished with lubri-seal ball bearings throughout. Gears and pinions made of special alloy steel, heat-treated cut teeth. Gear system sealed and running in oil. Hooks made of drop-forged alloy steel, heat-treated to stand 200 per cent over rated capacity.

Extra heavy load chain is made of special alloy steel. Will not kink or bend. Sheave is extra heavy steel casting.

Sensitive pendant rope control permits load to be raised or lowered a fractional part of an inch.

When ordering, state voltage, phase and cycle, lifting speed, and whether for a.c. or d.c.

The letter D signifies that hoist has a double chain.

Motor specifications, other than above, furnished upon application.

## Model YC Coffing Ball Bearing Spur-Gear Chain Hoists

Top hooks and load hooks are made of drop forged heat treated steel and are tested at more than 100 per cent over their rated capacity without any signs of yielding.

Extra heavy certified malleable iron cross-head assures maximum strength and permits rocking motion of hoist.

Heavy suspension plates provide support between top hook crosshead and load sheave. Also support the malleable iron saddle for double chain hookup. On double chain hoists, these plates eliminate the use of a top yoke, reducing weight and headroom and permitting hoist to hang evenly at all times.

Weston automatic load brake securely holds load at any desired position. A slight pull on hand chain is required to lower load. Dust guard protects brake from dust and dirt.

Load sheave is large and heavy and is a special Zee metal casting with pockets formed to fit steel links of load chain.

Driving pinion is made of special alloy steel to resist breaking, twisting and bending.

The load sheave is mounted on two heavy precision ball bearings, enclosed and protected from dust and grit, eliminating friction.

Load chain is made of high grade steel, electric welded, heat treated and at the proper pitch to fit the sheave pockets perfectly. At a maximum overload this chain will stretch before breaking.

Planetary spur-gear type gear system. Gears are mounted on bronze bushings and enclosed in a pressed steel cover. The gear pressure is so balanced that practically all friction is eliminated and efficiency increased.

Sturdy malleable iron hand chain guide prevents snagging and fouling of hand chain.

A heavy steel anti-friction Timken thrust bearing permits free swiveling of the load hook.

Highly polished steel hand chain fits perfectly into the pockets of the hand chain wheel.

### Coffing Power Pike Poles

This pole is built of two pieces of galvanized pipe, one telescoping the other. Power is obtained through the use of a Coffing Load Binder or Safety-Pull Hoist.

For straightening leaning poles one man, with this tool, can do the work of from two to six men.

Pole has a heavy steel base. Top cannot slip off pole.

Load binder or hoist can be used for many other purposes.

Height: minimum, 8 feet 2 inches; maximum, 11 feet 7 inches.

Weight 32 pounds.

Complete with Model A Load

Binder.....each \$35.45  
Pole Only.....each 18.20

### Coffing Midget Light Line Pullers

A tool for pulling telephone and light wires, and for many other uses. Built on the ratchet and/or crank principle.

Equipped with roller chain, five feet long.

Rated capacity, 600 pounds. Handle so constructed with a safety feature that it will bend at 100 per cent overload.

Each, Wt. 6 lbs. .... \$24.95  
Extra Chain.....per foot .60

### Coffing Load Binders

Drop-forged steel hooks with swivels on both ends. The take-up is  $\frac{5}{8}$  inch to each stroke of the handle.

If load becomes loose, it can be bound tight simply by drawing on lever. After load is taken off chain, both levers can be tripped at once and chain can be pulled through binder free.

Can also be used as a hoist and for stretching wire or cable.

### Coffing Temporary Cross Arms

Built to stand hard usage. Weighs much less than a standard cross arm, and no line truck should be without at least one set.

No. 10-A

For electric work. Hooks are self-locking, made of certified malleable iron, large enough to hold line hose to prevent current from arcing.

No. 10-A.....each \$17.55

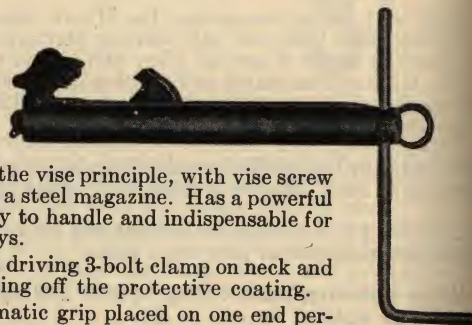

No. 10-C

For changing cross arms on corners.

No. 10-C.....each \$14.95

### Coffing Temporary Guy Clamps

Built on the vise principle, with vise screw enclosed in a steel magazine. Has a powerful grip, is easy to handle and indispensable for necking guys.

Prevents driving 3-bolt clamp on neck and thus stripping off the protective coating.

An automatic grip placed on one end permits necking as close to the pole as desired without slipping. Weight, 3½ pounds.

Each.....\$8.50

### Coffing Transformer Gins

Model ST

Tested to more than 3000 pounds without yielding.

Model OST

Model ST

Clamps on side of pole. Malleable iron and steel.

Model ST, Weight, 28 Pounds.....each \$16.10

Model OST

Clamps securely to top of any size pole. Made of special spring steel, angle iron legs and malleable iron clamp.

Model OST, Weight, 33 Pounds.....each \$16.10

Model WT

Main body and legs made of seasoned hickory, bolted to malleable iron clamp. Non-conductor of electricity.

Model WT, Weight, 28 Pounds.....each \$16.10

## Chance Transformer Gins

Heat treated aluminum castings and wooden mast make the Chance Insulated Transformer Gin light in weight, easy to handle, and exceptionally strong. It is designed primarily for hoisting small distribution and rural line transformers, circuit breakers, and reclosers for pole mounting. Gin is applied to pole quickly by the safety locking Chance Chain Tightener. Eye of gin extends out 8½ inches from pole, allowing adequate clearance for hoisting. Rated for 1500 pounds maximum load. Every gin is factory tested before shipment.

No.	Description	Approx. Wt., Lb.
30TG	24-Inch Gin Complete	10½
30TG-1	36-Inch Gin Complete	11½

## No. 325 Chance Pole Unloaders

The Chance Safety Trip Pole Unloader features a safety lock pin plus a toggle trip arrangement which prevents release of the load until the lever is pulled by hand line to shift the toggle past dead center. Using this safety trip method, only two men are needed for unloading poles instead of an entire crew. A once hazardous job is made safe.

Safety Pole Unloader Set Complete consists of: 2 safety trips with bolts and large washers; 2 steel rope cables, 25'x¾"; 2 thimbleye bolts, ¾x12 inches with large washers; 4 Crosby wire rope clamps for ¾-inch wire rope.

Approximate weight, 58½ pounds.

## No. 3146 Klein Linemen's Wrenches

Bell System Type

Wrench is particularly adapted for use on heavy 3-bolt guy clamps on which the clearance for a wrench is limited.

This wrench is forged of select bar steel, heat treated, and is of the open end type with two openings of a different size at each end. There is a hole provided at the larger end so that the wrench may be used for turning in standard pole steps.

Size, 13 inches. Weight per dozen, 23 pounds.

Openings on Smaller End.....	inches 1½ and 5/8	5/8 and 7/8

**No. 102-1 Klein Splicing Clamps**

Arranged with 5 round holes for bare wire. For copper wire Nos. 8, 10, 12, 14, 16, B & S. For iron wire Nos. 10, 12, 14, 16, 18, B.W.G. Length, 8 inches.

No. 102-1.....each \$5.70

**No. 102-3 Klein's Splicing Clamps**

Large hole can be used for guy wire or messenger strand. Copper wire Nos. 2, 4, 6, 8, 10 and 12 A. W. G.

Iron wire Nos. 4, 6, 8, 10 and 12 B. W. G.

No. 102-3, 10 $\frac{3}{4}$ -Inch. Wt. per Doz., 16 $\frac{3}{4}$  lbs. each \$7.40

**No. 102-30 Klein's Splicing Clamps**

Holes reversed for those who prefer this arrangement

Copper wire Nos. 2, 4, 6, 8, 10, 12 A. W. G.

Iron wire Nos. 4, 6, 8, 10, 12, 14 B. W. G.

No. 102-30, 10 $\frac{3}{4}$ -Inch. Wt., per Doz., 15 lbs. ....each \$7.40

**No. 102-48 Klein's Splicing Clamps**

Largest hole convenient to bring together guy strand before applying a three bolt clamp.

Copper wire Nos. 0, 2, 4, 6, 8 A. W. G.

No. 102-48, 10 $\frac{3}{4}$ -Inch. Wt., per Doz., 15 lbs. ....each \$7.40

**No. 105-15 Klein's Splicing Clamps  
For Twisting Double Tube Sleeves**

For copper sleeves Nos. 8, 10, 12, 14, 17, A.W.G.

For iron sleeves Nos. 10, 12, 14, 16, 19, B. W. G.

No. 105-15, Size 8-inch. ....each \$6.10

**No. 105-17 Klein's Splicing Clamps**

Has five sets of chamber for twisting double tube sleeves.

For copper sleeves Nos. 6, 8, 10, 12, 14, 17, A.W.G.

For iron sleeves Nos. 8, 10, 12, 14, 16, 19, B. W. G.

No. 105-17, Size 10 $\frac{3}{4}$ -inch. ....each \$7.40

**No. 105-31 Klein's Splicing Clamps**

Three double chambers for twisting Nos. 10 and 12 A. W. G. sleeves, Nos. 12, 14, and 17 N. B. S. sleeves.

No. 105-31, 8 $\frac{1}{4}$ -Inch. Wt. per Doz., 5 $\frac{3}{4}$  lb. ....each \$6.10

**No. 132-15 Klein Combination Wire  
and Sleeve Clamps**

Used for telegraph, telephone and power line work. Has an unusual range of wire and sleeve sizes. Made with 5 round holes for twisting bare wire and an oval opening for guy wire or messenger strand. Copper wires No. 4, 6, 8, 10, 12, A.W.G. Iron wire Nos. 6, 8, 10, 12, 14, B.W.G. Strand opening, .437x.624.

Reverse side has 5 chambers for twisting double tube sleeves. Copper sleeves Nos. 6, 8, 10, 12, 14, 17, A.W.G. Iron sleeves Nos. 8, 10, 12, 14, 16, 19, B.W.G.

Hammer forged from high grade crucible tool steel. Oil tempered, polished head and black handles.

Size, 11 $\frac{1}{4}$  inches. Weight per dozen, 18 pounds.

No. 132-15.....each \$10.50

**No. 132-46 Klein Wire and Sleeve Clamps**

One side for double tube copper sleeves Nos. 4, 6, 8, 10, and 12 B. W. G. Other side for copper wire Nos. 4, 6, 8, 10, and 12 B. W. G.

Weight per dozen, 17 $\frac{3}{4}$  pounds.

No. 132-46.....each \$10.50

**No. 132-12 Klein's Combination Wire and  
Sleeve Clamps**

For telephone and telegraph general line and trouble work. This clamp has four round holes for twisting bare wire.

Copper wire Nos. 6, 8, 10, 12, B. & S.

Iron wire Nos. 8, 10, 12, 14, B. W. G.

The reverse side has four double chambers for twisting sleeves.

Copper sleeves Nos. 8, 10, 12, 14, 17, B. & S.

Iron sleeves Nos. 10, 12, 14, 16, 19, B. W. G.

Hammer forged from high grade crucible tool steel. Oil tempered, polished head and black handle.

Weight per dozen, 11 pounds.

No. 132-12, Size, 9 Inches. ....each \$7.70

**No. 132-30 Klein's Combination Wire and  
Sleeve Clamps**

Sleeve openings are for N.B.S. and B.W.G. sizes 9 and 8 respectively. Remaining five openings cover range of wire sizes used on railroad signal and telegraph work.

No. 132-30, Size, 11 $\frac{1}{4}$  In., Wt. per Doz., 18 Lb. ....each \$10.50

**No. 132-48 Klein's Copperweld Sleeve Clamps**

This clamp has four chambers for twisting single tube (oval) sleeves used for making joints on copperweld conductors sizes 4A, 6A, 8A, and 3 No. 12. These chambers also accommodate single tube (oval) sleeves as in following table:

Copperweld Size No.	Solid B&S Copper No.	Strand B&S Copper No.	Copperweld Size No.	Solid B&S Copper No.	Strand B&S Copper No.
4A	1	2	8A	4	5
6A	3	4	3 No. 12	5	6

Swing latch holds head securely closed while joint is twisted preventing slippage or burning which might develop otherwise from bowing of handles when twisting larger sleeves.

No. 132-48, Size, 11 $\frac{1}{2}$  In., Wt. per Doz., 18 Lb. ....each \$12.20

### No. 132-39 Klein's Strand and Wire Holding Tools

This tool serves as a temporary clamp to hold together two sections of strand or wire while placing permanent clamps or splicing and serving.

Openings will fit:  $\frac{1}{8}$ -inch strand (16000-lb. Bell System);  $\frac{3}{8}$ -inch strand (10000-lb. Bell System);  $\frac{1}{4}$ -inch strand (6000-lb. Bell System);  $\frac{1}{8}$ -inch strand (2200-lb. Bell System);  $\frac{1}{4}$ -inch solid No. 12 B.W.G. iron or No. 10 B. & S. copper wire; and  $\frac{3}{8}$ -inch solid No. 13 B.W.G. iron or No. 11 B. & S. copper wire.

Hammer forged from high grade tool steel. Polished head and handles temper blued.

Weight per dozen, 18 pounds.

No. 132-39, Size, 11 $\frac{1}{4}$  Inches.....each \$10.50

### No. 132-47 Klein's Wire and Sleeve Clamps

For single tube or oval copper sleeves. Nos. 2, 4, 6, 8, and .104.

Hinge has stop to prevent handles from opening beyond point convenient for clamping on sleeve.

No. 132-47, Weight per Doz., 18 Lbs.....each \$12.20

### No. 132-74 Klein's Wire and Sleeve Clamps

Has three special chambers for twisting single tube or oval (Memco) sleeves Nos. 2, 4, and 6; also an oval (hog) hole .437x.624 for guy strand.

Chambers or openings are a modified figure eight shape, giving a secure hold which prevents burning sleeve when joint is twisted. Swing latch overcomes any spring in handle which might otherwise develop when used on larger sleeves. Stop in hinge prevents handles from opening beyond the point convenient for clamping onto the sleeve.

Hammer forged from high grade tool steel, polished head, temper blued handles. Size, 11 $\frac{1}{2}$  inches.

No. 132-74, Weight per Dozen, 16 Pounds.....each \$12.20

### No. 107-20 Klein's Di-Stock Sleeve Twisters

For all types of oval or double tube copper or aluminum sleeves from No. 4 B&S solid to No. 3/0 B&S strand. Tubular handles,  $\frac{7}{8}$ -inch diameter, threaded onto head. Readily attached or removed. Space between yokes, 3 inches, usually sufficient for three sleeve openings.

Head readily and securely tightened onto sleeve by thumb nut operating in hinged yoke. Central position of head makes for ease in keeping sleeve straight while twisting joint and provides ample leverage. Held in blank and finished with sleeve openings as ordered.

Length overall, 23 $\frac{1}{2}$  inches. Weight, 3 $\frac{1}{4}$  pounds.

No. 107-20.....each \$23.00

### No. 107-34 Klein's Di-Stock Sleeve Twister

Head forged from high grade tool steel and heat treated for maximum toughness and wear. A hand operated cam lever closes the head securely on the sleeve—no thumb screws to bother with.

Tubular handles are furnished.

No. 107-34, Weight, 9 Pounds.....each \$40.20

### Klein's Chicago Grips

Main body piece and lever are forged steel. Draw parts are wrought steel. Gripping jaws are machined smooth.

#### No. 1613—For Bare Wire

Bronze lining of jaws prevents slippage and consequent surface abrasion of conductor or strand.

No.	Each	B. & S. WIRE SIZE		Approx. Max. Open. In.	Wt. Lb.
		Maximum	Minimum		
1613-30	\$5.20	6 Solid (.162")	12 Solid (.081")	.22	1 $\frac{1}{2}$
1613-30B	7.70	Same as above,	with Bronze Lined Jaws		
1613-40	8.20	0 Strd. (.373")	10 Solid (.102")	.44	3

### Klein's Chicago Grips With Bronze Lined Jaws

Construction engineers are demanding grips that will not slip under heavy loads and which will not damage the conductor or strand. These requirements are met by welding a lining of bronze into the jaws of standard Chicago Grips, indicated by "B" following catalog number.

### Klein Haven's Steel Grips

All parts are solid steel drop forgings, heat treated. Eye is pear shaped, and a roller fitted to body yoke makes motion free and allows load to come on smoothly. Instantaneous hold, yet a shake on tackle rope releases grip. Will not slip due to hand cut serration in face of eccentric. Galvanized finish.

No.	Each	1604-10	1604-20
No. 4 B. & S.	\$4.80		7.50

### No. 1625-20 Klein's Improved Haven's Grips

For wires 3/4 inch to No. 2 B. & S. For use on solid or strand wires. Swing latch engages stud on lower jaw, preventing any distortion of body or cross bolt under load. For use on trolley wire; is weatherproof. Can be readily adapted, at slight extra cost, for hot line work on weatherproof (insulated) conductors. Approximate maximum opening, 2 1/2 inch (.78); approximate minimum opening, 1 1/2 inch (.22). Parts are alloy steel drop forgings properly heat treated. Swing latch holds tool on line in position for pull. Eye is pear shaped 1 1/4 inch wide. Hand cut serration in face of eccentric assures a hold that cannot slip. Galvanized finish.

No. 1625-20, Weight per Dozen, 45 Pounds...each \$16.10

### No. 1700-30 Klein's Chicago Linemen's Tools

This tool is a combination of No. 1613-30 Chicago Grip and No. 1702-20 Howes Wire Tool. It is largely used by telephone companies.

Swivel hook, main body piece and lever of grip are forged steel. Draw parts are wrought steel gripping. Jaws are machined smooth. Rivets machine turned.

For No. 6 wire and smaller down to No. 13. Other sizes of grips can be furnished in this combination to order only.

Weight, 4 pounds.

No. 1700-30.....each \$16.80  
Strap for No. 1700-30, 1 1/4 In. x 7 Ft.....each 4.90

### No. 1702-20 Klein's Howes Wire Tools

The strap is harness leather 1 1/4 inches wide and 7 feet long. At one end a forged steel swivel hook is provided with opening to permit anchoring round insulator pin. The forward end has a locking device to hold the load at any distance and is so arranged that a wire grip can be readily attached.

The metal parts are galvanized.

Weight per set, 2 1/2 pounds.

No. 1702-20.....each \$12.30  
Extra Strap, 1 1/4 Inches x 7 Feet.....each 4.90

## No. 1802 Klein's Heavy Block Tackles

### Drop Forged Hooks and Eye

Consist of two special double sheave blocks. Spring guarded snap hooks do away with taping. Pulleys are bronze bushed and self lubricating. Furnished with 30 feet best quality Manila rope, 4 strand.

No. ....	1802-40	1802-50	1802-60
Each .....	\$30.50	33.70	35.00
Size Rope.....inches	1½	5⁄8	¾
Weight Each.....pounds	15½	18	19

## No. 1803 Klein's Hand Lines

Best quality manila rope which will not twist. Spliced to eye of snap hook with galvanized steel thimble. Snap hook is drop forged with round eye, opens to ¾ inch.

Complete with ¾-inch, 4-strand manila rope and No. 443-A snap.

No. 1803-60, With 75-Foot Rope, Weight Each, 3½ Pounds.....	each \$9.20
No. 1803-120, With 120-Foot Rope, Weight Each, 5¼ Pounds.....	each 12.40

## No. 1802-30 Klein Self-Locking Block Tackles

Consists of light steel galvanized shell block, fitted with a snubbing hook to lock load in any position. Block is arranged with spring guard snap hooks.

When pulling up wire to make a splice it may be used with two grips attached to the snaps, or with one grip and hook No. 258 to anchor to an insulator pin or other convenient anchorage. Hook is specially shaped to fit under double petticoat insulator on cross arm.

Furnished with 25 feet of ¾-inch, 4-strand manila rope and detachable anchor hook. Shipped unassembled

Weight each, 3 pounds.

No. 1802-30.....each \$10.20

## No. 443-A Klein's Snaps For Hand Lines and Light Hoists

Can be used on all light hoisting, for roofers, etc. Drop forged with galvanized finish. Hook and eye are integral drop forging. Duck bill nose closes around latch.

Will carry loads up to 2000 pounds. When fitted to a 4-inch tackle block, it provides an ideal means for connecting with come-along; no taping is necessary.

Opening will take up to ¾ inch. Eye, 1¼ inches. Length overall, 5½ inches.

Weight per dozen, 6½ pounds.

No. 443-A.....each \$2.90

## No. 258 Klein's Anchor Hooks for Tackles

Solid steel drop forging. Overall length, 5½ inches x 3¼ inches across the hook. Size opening, 2 inches; inside diameter of eye, 5⁄8-inch.

Galvanized finish.

Weight per dozen, 4 pounds.

No. 258.....each \$1.70

## No. 455 Klein Heavy Duty Utility Snap Hooks

Will not come loose on a slacked line.

Made of drop forged steel and will carry a working load of 8000 pounds with an adequate safety factor.

May be used on any conventional steel block 4 inches or smaller, or on pulling tackle or snatch blocks by simply replacing the open hook with the Klein snap hook.

Length, 4½ inches.

Weight, 1 pound.

No. 455.....each \$4.00

## No. 324 Simplex Aerial Cable and Wire Tensioning Jacks

Capacity, 2 Tons

Sufficiently powerful to easily pull overhead and underground cables and take up slack in trolley, guy and transport wires.

The speed trigger permits instant slack take up at any point when the jack is not under load. Steel lever furnished with safety spring clip that prevents it from falling.

Easy to set up because of its non-flexible rack bar. Exerts a direct line pull.

For tensioning bare wire, use two bare wire grips and two wire slings. When used for splicing overhead cable, special equipment consisting of two double eye split cable grips, two 3-bolt clamps and two wire slings, are required.

No. ....	324
Each .....	\$32.00
Capacity.....tons	2
Travel.....inches	20¼

## No. 869 Diamond Slack Pullers

Sufficient slack can be temporarily taken up in messenger strand for making splices or repairs in aerial cable.

Steel rollers in each end of tool for support on messenger strand. Lifting screw is equipped with a removable grooved roller. Tension is applied by tightening standard nut on upper end.

Weight, 10 pounds.

No. 869 Black Finish.....each \$15.00

## Matthews Quick Release Slack Pullers

No. 730

No. 732

Enables one man to do the work of four when taking the slack out of guy strand, messenger wire or changing strain insulators, or for splicing trolley wire, telephone or power cable under tension; also used for pulling back underground cable. Takes the place of block and tackle. One man can easily pull 3000 pounds with the No. 730, and 6000 pounds with the Nos. 731 or 732. No slack is lost in dead ending as strain is held to the exact point pulled.

With the new quick release feature, when the entire take-up has been used, the wire is temporarily dead ended and the lock released. This permits the slack puller to be immediately extended to its maximum or any intervening length.

No.	Description	Ship. Wt. Lb.	Each
730	Maximum Take-Up, 19 Inches.....	17	\$56.00
731	Same as No. 730, Except That Clevis is Substituted for Hook.....	17	60.00
732	Same as No. 731, Except That it Also Has Quick Take-Up Feature.....	17	66.00

The 730 and 731 do not have the quick take-up feature.

## No. 765 Greenlee Cable Pullers

Cable Puller Set up for Pulling into a Box from a Vertical Section of Conduit

Cable Puller Set up for Pulling from the End of a Horizontal Section of Conduit

Machine will exert a maximum pull of 7500 pounds. Has two speeds. Dog on back gear prevents unwinding of cable. Shaft extends from both sides of machine for one or two operators. Two cranks supplied, but ratchet wrenches can be used. Electric power unit can be used for driving.

The 6½-inch diameter tension drum clamps to extension on roller bracket where it can be swiveled in complete circle. Cut steel gears. Cast parts are of semi-steel. Base is provided on drum for bolting. Roller bracket has two roller positions. Roller has 5-inch diameter and 3-inch width to clear basket connection and electric cable.

Frame is formed from two 36-inch sections of channel iron.

In exposed work, clamping is done directly on to conduit through which cable is to be pulled. Clamping device consists of a bracket on frame and two lengths of pipe wrench chain. Rated for conduit from 2 to 5 inches.

For pulling cable into concealed conduit, a flexible elbow can be furnished. This attachment consists of a flexible elbow, 4-inch master sleeve, bushings for 2, 2½, 3 and 3½-inch conduit, two unions for small bushings to permit using them in close quarters and a 4 to 2-inch reducer.

A ¾-inch 6-19 strand cable is recommended.

## No. 202-SW Klein's Oblique Cutting Pliers

With W Stripping Notches, Sleeve Openings and Skinning Hole—Bell System Type

An all-purpose cutting tool for telephone installation and maintenance work. The W notches will slit acetate cellulose and other insulations from wires up to .058-inch o.d. A stripping hole .052-inch diameter is provided in blades which also provides means to crimp on .032 and .025 single tube copper sleeves. Sleeve openings in handles.

Size, 5 $\frac{1}{2}$  inches. Polished head, handle temper blued.

Weight per dozen, 3 $\frac{3}{4}$  pounds.

No. 202-5SW.....each \$5.80

## No. 242-6 Klein Oblique Cutting Pliers

Heavy Duty Pattern

For use where it is not necessary to reach into confined spaces.

Polished head, handles blued.

Size, 6 inches, Packed 6 in box.

No. 242-6, Weight per Dozen, 4 $\frac{1}{4}$  Pounds.....each \$5.50

## No. 220-7 Klein's Oblique Cutting Pliers

With Handform Handles

A 7-inch plier made especially for automotive mechanics.

Useful for pulling cotten pins, for

choke wires, etc.

Hammer forged from high grade tool steel of special analysis. Knives are close cutting and carefully matched for their full length.

Individually fitted, tempered, adjusted and tested.

Handform handles provide full leverage and comfort for continual use.

Polished head, handle temper blued.

Packed 6 in a standard package.

Weight per dozen, 7 pounds.

No. 220-7.....each \$6.50

## No. 301 Klein's Long Nose Pliers

Without Cutters

For stripping insulated wire ends. Point,  $\frac{3}{16}$  inch round.

Extra long nose, 2 $\frac{3}{4}$  in.

No. 301-5, 5-Inch Size; Wt. per Doz., 3 $\frac{3}{4}$  Lb....each \$4.80

No. 301-6, 6-Inch Size; Wt. per Doz., 3 $\frac{3}{4}$  Lb....each 4.90

## No. 303-6 Klein's Long Needle Nose Pliers

Long nose permits use in confined spaces. Has polished head and handles temper blued.

Weight per dozen, 3 $\frac{3}{4}$  pounds.

No. 303-6, Length, 6 Inches.....each \$4.90

## No. 317 Klein's Chain Nose Pliers

Without Cutters

For general use.

Size, 6 inches.

Hammer forged from high grade tool steel. Polished head, handles temper blued.

No. 317-6, Weight per Dozen, 3 $\frac{1}{2}$  Pounds.....each \$4.90

### No. 217 Klein's Chain Nose Pliers Side Cutting

With side cutting knives. Size, 6 in. Polished head, handles temper blued.

Weight per dozen, 3½ pounds.  
No. 217-6 ea. \$5.50

### No. 313 Klein's Heat-Coil Pliers

Particularly adapted for the removing of heat coils from switchboards and telephone terminals, as the points of the

nose are shaped to fit the coils. This tool is also serviceable in removing caps from batteries or from binding posts, as well as holding any cylindrical object.

Size, 6 inches.

Polished head, handles temper blued.

Packed 6 in a standard package.

Weight per dozen, 3¾ pounds.

No. 313-6.....each \$5.00

### No. 305-6 Klein's Long Flat Nose Pliers

Has long wide flat nose. Inside of jaws left smooth if desired. Has polished head and

handles temper blued. Weight per dozen, 3½ pounds.

No. 305-6, Length, 6 Inches.....each \$4.70

### No. 206-6 Klein Side Cutting Pliers Long Flat Nose

Long wide cutting knives. Smooth jaws if desired. Has polished head, handles temper

pered blued. Length, 6 inches. Packed 6 in a box.

No. 206-6, Weight per Dozen, 3½ Pounds.....each \$5.50

### Klein's Long Flat Nose Spring Adjusting Pliers

Hollow ground on outside of jaws to reach between and grasp springs easily.

No. 311-5½, 5½ Inch, Weight per Doz., ¾ Lbs. each \$4.90

### No. 304-6 Klein Long Duck Bill Pliers

For general use. Jaws are wider and heavier than those of flat nose pliers.

Has polished head and handles temper blued.

Length, 6 inches. Weight per dozen, 3½ pounds.

No. 304-6.....each \$4.90

### No. 205-6 Long Duck Bill Side Cutting Pliers

General use. Jaws are wider and heavier than those of flat nose plier. Has polished head and handles

temper blued. Weight per dozen, 3 pounds.

No. 205-6, Length, 6 inches.....each \$5.50

### No. 302-6 Klein Long Curved Nose Pliers

Angle gives full clearance. Length, 6 inches.

Weight per dozen, 3 pounds.

No. 302-6.....each \$5.50

### No. 316-S Klein's Long Nose Sleeve Pliers Bell System Type

Sleeve openings permit twisting No. 17 N.B.S. and smaller copper sleeves. Point, ½ inch round.

No. 316-S, 6-Inch Size; Wt. per Doz., ¾ Lb....each \$4.90

### No. 301-C Klein's Long Nose Cord Crimping Pliers

For telephone switchboard work; oval groove for crimping telephone cords. Point, ½ inch round.

No. 301-C, 6-Inch Size; Wt. per Doz., ¾ Lb....each \$4.90

### No. 039 Klein's Cord Tip Closing Pliers

The jaws of this tool are designed to permit its use as a hand press for closing cord tips such as W.E. 101 and 102. The circular opening in the jaws is correctly

sized to insure a perfect connection when the closure is completed.

Size, 5 inches.

Polished head, handles temper blued.

Packed 6 in a standard package.

Weight per dozen, 3 pounds.

No. 039.....each \$6.00

### No. 202-5-AV Klein's Oblique Cutting Pliers

#### Narrow Head

For heavy cutting.

Hammer forged from high grade tool steel. With volute spring for bench work.

No. 202-5-AV, 5½-Inch, Weight per Doz., 4 Lb. each \$6.50

### No. 245-5-V Klein's Oblique Cutting Pliers

For electricians, telephone men, etc.

Hammer forged from high grade tool steel. With volute spring for bench work.

No. 245-5-V, 5-inch, Weight per Doz., 3 Lb....each \$6.50

## No. 301-5-V Klein's Long Nose Pliers

### Without Cutting Knives

Hammer forged from high grade tool steel. With volute spring for bench work.

No. 301-5-V, 5-Inch, Weight per Doz., 3½ Lb. . . each \$6.50

## No. 203-5-V Klein's Long Nose Cutting Pliers

For production bench work where a combination of long jaws with cutting knives is required. Fitted with volute spring.

No. 203-5-V, Weight per Dozen, 2¾ Pounds . . . each \$7.50

## No. 1550-2 Klein's Xela Electricians' Knives

A handy combination for the electrician, combining an emergency screwdriver, a knife blade for cutting or stripping wire; safely locked so that it cannot close during use.

Has a well-tempered cutlery steel blade, a strong joint, a solid well-proportioned hand fitting cocobola handle.

Screwdriver blade is locked when open; to unlock a slight side pressure of the thumb releases the lock and permits the blade to be closed readily.

No. 1550-2, Double Blade. . . . . each \$3.20

## Xela Electrician's Scissors

Made of high grade steel properly tempered.

Has screw hinge.

Nickel plated finish.

Size, 5 in.

Weight per dozen, 2 pounds.

No. 2100-5. . . . . each \$3.30

## No. 1305-2 Klein's Inspectors' Tool Kits

Solid black leather folding case strongly stitched, reinforced back. Fitted with one each of the following tools: No. 201-6 side-cutting plier; No. 301-5 long nose plier; No. 1550-2 Xela electricians' knife; 1 pair electricians' tweezers; 1 special file; 1 special screwdriver.

A handy assortment to fit the pocket. Weight, 1½ pounds.

No. 1305-2. . . . . each \$18.00

## No. 5139 Klein's Canvas Tool-Packs

Made of sturdy, brown canvas. A heavy zipper instantly closes or opens the full length mouth. Especially useful for a selection of frequently used small tools.

Weight per dozen, 3 pounds.

No. 5139, Size, 6x12 Inches. . . . . each \$1.70

## Klein Tool-Kits

Designed for mechanics, service men and electricians.

Contains long nose plier, special side cutting plier, diagonal cutting plier, electrician's knife, a pair of electrician's tempered tweezers,

4½-inch file and a screw driver with insulated handle. All contained in a Keratol roll fastened with a strong strap and buckle.

No. 1305-33A. . . . . each \$23.00

## No. 5116 Klein's Detachable Plier Holsters

Made of heavy harness leather with loop to slip over belt.

Carries 7, 8 or 9-inch side cutting pliers.

Mouth of pocket is framed to hold open position permanently.

Length, 10 inches.

Weight per dozen, 6 pounds.

Price, No. 5116. . . . . each \$3.50

## Leather Plier Pockets

No. 5107

No. 5112

Made of good quality leather. Has slits for belt.

No. 5107, Weight per Dozen, 2½ Pounds. . . . . each \$2.00

No. 5112, Weight per Dozen, 2½ Pounds. . . . . each 2.80

## Klein Combination Tool Pockets

No. 5118-K

Made of heavy harness leather. Opening at bottom prevents accumulation of dirt or water. Top flap of double thickness leather is for riveting to belt.

Space provided for pliers fits 6, 7, 8 and 9-inch side cutting pliers.

### No. 5118-K For Pliers and Knife

Weight per dozen, 7½ pounds.

No. 5118-K, Size, 4¾x8 In. . . each \$3.30

### No. 5118-S For Pliers and Screwdriver

Weight per dozen, 5½ pounds.

No. 5118-S, Size, 4x8 In. . . . . each \$2.80

### No. 5118-R For Pliers and 6-Foot Rule

Weight per dozen, 7½ pounds.

No. 5118-R, Size, 4¾x8 Inches. . . . . each \$3.30

### No. 5111 Klein's Hip Pocket Tool Cases

Suitable for carrying pliers or other tools in hip pocket.

Prevents cutting of clothes, or possible injury to the person.

Made of black leather, 5x7 inches.

Weight per dozen, 5½ pounds.

No. 5111.....each \$2.80

### Klein's Rubber Glove Pouches

Scotch chrome leather pocket for carrying rubber gloves. Comes equipped with snap and D ring, ready to attach to body belt.

No.....	5120-9	5120-15
Each.....	\$5.00	6.80
Size.....in.	7½x9	7½x15
Weight per Doz.....lb.	4½	7

### No. 1515-1 Klein's Cable Sheath Splitting Knives

Cutlery steel blade, oil tempered. Riveted, harness leather handle.

Weight per dozen, 12 pounds.

No. 1515-1.....each \$4.90

### No. 1560-3 Klein Linemen's Skinning Knives

In constructing this knife, the shape of the blade has been considered to make it a safety tool.

Half hard rubber handle is molded on securely and provides adequate insulation and a positive grip.

Hole in handle is through the solid rubber.

Length of blade, 3 inches; overall length, 8 inches.

Weight per dozen, 4¼ pounds.

No. 1560-3.....each \$3.50

### No. 5163 Klein Skinning Knife Sheaths For No. 1560-3 Knife

Can be riveted to belt or carried in hip pocket. Opening at bottom to prevent collection of dirt and permit escape of water.

Size, 3x9 inches. Weight per dozen, 4 pounds.

No. 5163.....each \$2.20

### No. 45-079 BX Armor Cutters

A lightweight pocket tool that cuts armor perfectly in one operation. For use on either two or three-wire, No. 14 or No. 12 cable. Eliminates nicked wires or shorts.

No. 45-079.....each \$3.83

### Ideal Wire Strippers

For Solid or Stranded Wire

#### Standard Model

Cutting edges are shielded. Blind centers of the V-notches on blades prevent cutting or scarring of wire.

#### Automatic Model

Lever stops return of arms until wire is removed after stripping, then they are quickly snapped back to normal.

Lever will not operate unless wire with insulation .050 inch or larger is inserted between grippers. When no wire is inserted, lower gripper moves upward when handles are squeezed, pushing trigger and lever up and out of action.

No.	Standard Each	Automatic Each	Extra Blades per Set	Strips Wire Gage	Shipping Weight Pounds
Universal	....	\$5.65	\$1.18	10-22	1½
0	\$4.71	5.65	1.18	20-30	1½

2	4.71	5.65	1.18	10-16	1½
3	4.71	5.65	1.18	8-14	1½

### No. 45-018 Ideal Cable Rippers

For use on non-metallic sheathed duplex cable or lead covered cable. Ripper is squeezed onto the cable and pulled, ripping the cable with one simple operation. Can also be used for ripping the outer sheathing of other cords, lead cables, etc., where outside diameter is not greater than 5/8 inch. Weight, 2 ounces.

No. 45-018.....each \$3.35

### No. 779 Diamond B Braid Stripper

With 3 Grooves for 3 Sizes of Drop Wire

Used to remove braided covering from drop wire.

Sliding guard protects thumb and forces wire down on cutting blade. Blade can be rotated to new position when used section becomes dull.

Handle is equipped with steel wrench plate with hexagonal openings of 3/8, 1/6, and 5/8 inches for bridging connectors, nuts or heads.

Made of die-cast aluminum with natural finish.

Packed 12 to a carton. Weight, 1¼-pound.

No.	Per Dozen	Width, In.	Depth of Cut, In.
779	\$33.00	.270	.060
		.330	.080
		.375	.110

## Porter Rigid and Swivel Type Clipper Cut Bolt Clippers

### Rigid Type

Ball and socket joints and positioning spring permit swivel type flexible bolt clipper to cut at any angle. The cutting jaws of rigid type are firmly fixed in line with the handles and are beveled almost entirely from one side for close cutting, such as clipping of bolts, and are generally specified where a tool is required for all around work in softer metals.

### Swivel Type

Swivel type is recommended for the same close cutting requirements, but also has the added utility of the 180° arc wrist action.

### Rigid Type

\*Same jaws and heads can be used for either rigid or swivel.

## Porter Rigid and Swivel Type Center Cut Bolt Clippers

### Rigid Type

Ball and socket joints and positioning spring permit swivel type flexible bolt clipper to cut at any angle. Cutting jaws of rigid type firmly fixed in line with handles and are beveled equally, bringing cutting edge at center of jaw. Recommended where close cutting is not a requirement. Cuts materials up to 300 Brinell hardness.

### Swivel Type

Swivel type used for same type of work. Permits ready application of full operating pressure in close quarters. Recommended for building construction.

Specify center cut round edge type for cutting reinforcing rods and for use in steel and wire mills.

## Lenox Hackmaster High Speed Hacksaw Blades

### Unbreakable Hand Blades

A saw made of high speed steel that has the back of the blade annealed so as to give it flexibility, and the tooth edge hardened for durability. Has all the cutting qualities of the standard high speed steel blade.

Inasmuch as this is a truly flexible blade, it will withstand hard usage, even misuse, without breaking. Sharp twists and kinks, which are the main reason for saw breakage, are absorbed without damaging this blade.

Packed 1/2 gross in a box.

### No. 36-001 Ideal Joist Boring Machines

The Ideal Boring Machine is operated from the floor, and bores holes at any angle through rafters, joists or studdings. Used on new or old floor and ceiling construction.

The bit eats right into the wood with a light pull on the chain. Reversing the pull backs the bit out without bending or breaking knurled collar—no tools required. Bits are solid point type, with special lip construction for fast and easy boring. Available in  $\frac{1}{16}$  and  $\frac{1}{8}$ -inch diameters.

Weight, 17 pounds.

No. 36-001, with 1 Bit.....each \$23.53  
Extra  $\frac{1}{16}$ -Inch Bits No. 36-004 (Quick Cutting) ..ea. 1.18

### No. 16 Greenlee Unispur Electricians' Auger Bits

Has twist length of  $5\frac{1}{2}$  inches; overall length without screw point, 10 inches. Has 8-pitch single screw point. Head has single cutter with 1 outlying spur.

Standard package,  $\frac{1}{2}$  dozen in a box.

### Greenlee Bit Extensions

No. 900, is made to drive a bit up to 1-inch diameter but small enough to follow a  $\frac{5}{8}$ -inch bit. This is due to the thin outer shell, which does not drive the bit, the driving coming from the bit chuck within. There are 5 major parts, all exposed surfaces of which are nickel-plated except the square, which is lacquered. The positive lock prevents the loosening of the holding sleeve. This lock consists of a sleeve with a spring tension, which engages the screw sleeve when released, and two  $\frac{1}{8}$ -inch pins prevent it turning.

No. 925. bit extension is similar in design to No. 900 except it is made extra heavy to follow a  $\frac{1}{16}$ -inch auger bit and drive tools up to 2-inch diameter.

Packed 1 in a leatherette case.

Marked in feet, inches and 16ths at 5 per cent extra.

## Michigan Chain Tapes

Especially popular in railroad and highway work. Line is detachable from reel, has heavy brass end clips, and is furnished with a pair of leather thongs.

Markings are on babbitt metal. Marked on one side only, feet only every foot, with end feet in 10ths. Blank space on each end.

Width, 5/16 inch. Approximate thickness, .015 inch. Length, 100 feet.

No. 3100, Tape Complete with Reel.....	each	\$17.60
No. 03100 Line Only, without Reel, with Thongs.....	each	11.60

## Klein's Linemen's Pole Climbers

(Also Called Spurs or Hooks)

Safety is the first and vital point in considering linemen's pole climbers. The lineman going up a pole depends entirely upon his spurs.

To assure utmost dependability Klein's Climbers are forged from special steels and are individually tempered. Shanks and gaffs are tested to insure perfect riveting and temper.

Leg iron or shank is made of spring steel; gaff or spur is forged from tool steel.

The shape of Klein's Climbers has been carefully considered. It is the result of many years' experience and much practical suggestion from linemen. Klein's Climbers have flexible shanks and yield readily to pressure of leg; they do not chafe. Gaff or spur is correct in shape, set of angle and temper. It is hand riveted to leg iron in secure manner.

## No. 1939 Klein Streamlined Linemen's Climbers

A newly designed climber in which the use of any unnecessary metal has been carefully avoided. Leg irons are flexible and tapered in width and thickness. The "critical" section from 3 inches above the gaff to half way across the stirrup has been designed for ample strength. The gaffs are slender type, preferred on treated (Black Jack) poles. A detachable wrought ring carries the ankle strap. Gaffs 3 1/2 inches long measured on the outside. Riveted top loop.

Each climber individually tested.

Size is measured from instep to end of shank. Special sizes on order.

Average weight per pair, 21 1/2 pounds.

Made in sizes, 15, 15 1/2, 16, 16 1/2, 17, 17 1/2 and 18 inches.

No. 1939.....per pair \$12.70

## Klein's Eastern Climbers

Has riveted strap loops.

Tested before leaving factory.

Standard sizes, 15, 15 1/2, 16, 16 1/2, 17, 17 1/2, and 18 inches. Other than standard sizes to order.

When ordering, specify length of shank desired. Measure from instep to extreme end.

Packed 1 pair in a carton.

No.	1901-M	1903-M
Per Pair.....	\$9.50	10.50
Weight.....pounds	3 3/8	2 7/8

## No. 1907 Klein's Tree Climbers

This is the standard tree climber used by forest rangers, top loggers, fire wardens, surveyors, etc. Tested before leaving factory.

Has riveted strap loop. Gaffs, or spurs, are 5 1/2 inches long measured on the outside and 3 1/2 inches long measured on the underside. They are set high in the leg iron so that points clear the ground.

When ordering, specify length of shank desired. Measure from instep to extreme end.

Packed 1 pair in a carton. Weight 4 pounds.

No. 1907.....per pair \$10.40

## Klein Linemen's Climber Straps and Pads

All leather used is first quality harness leather. All sewing is lock stitched with genuine linen thread hot waxed. Buckles and buckle tongues are Klein standard solid steel drop forgings, tested to 1500 pounds.

## With Square Pads—Straps 1¼-Inches Wide

This set consists of 2 upper or calf straps and two lower or ankle straps; and two square pads. Size straps, 1¼x22 inches. Size pads, 4x4 inches.

## No. 5204-KK Klein-Kord Tool Belts

Made of multiply Klein-Kord—specially woven, long staple cotton, with each ply laid in rubber and vulcanized—a material that is extremely flexible, waterproof and has a tensile strength many times that re-

quired in actual operation.

Belt is fitted with a Klein-Kord plier pocket, knife snap, tape thong, glove pouch loop, and lag wrench keeper.

Made in 36, 38, 40, 42, 44 and 46-inch sizes. Weight per dozen, 45 pounds.

No. 5204-KK, with Standard D Rings..... each \$22.00

## No. 1901-MG Klein's Linemen's Climber

## Gaff Guards

Made of harness leather. The wings of the guard fit around leg iron of climber just above the gaff and snap on.

The gaff is covered and protected by the leather fold with fiber stop.

Weight per dozen pairs, 1¾ pounds.

Set consists of one pair, 2 pieces.

No. 1901-MG.....per pair \$1.20

## Klein Safety Snaps

A solid steel snap used on body belts, safety straps, etc. Each piece integral, no joints or welds. There are three patterns as illustrated below, individually tested to 1500 pounds. Galvanized finish.

## Standard Snaps

Has wide nose covering spring latch protecting it from accidentally twisting out of Dee Ring. Can be used with any Dee.

Straps listed with plain catalog numbers have Standard Snaps.

## Hank's Snaps

Of special construction and must be used in conjunction with Hank's Dee Rings on belt.

Straps listed with "H" prefixing catalog numbers have Hank's Snaps.

## Klein-Lok Snaps

Has a twin latch arrangement. Both latches must be pressed simultaneously to release. Full factor of safety. Can be used with any Dee.

Straps listed with "KL" prefixing catalog numbers have Klein-Lok Snaps.

## Klein Ankle Straps

For Ring Attachment on No. 1939 Klein Linemen's Climbers

Made in two pieces and furnished with rivets and burrs. Punched ready for quick attachment.

Weight per dozen pairs, 10 pounds.

No.	5301-16	5301-26
Per Pair.....	\$4.70	4.50
Size.....inches	1¼x24	1x24

## Klein's Tool Belts

All Klein Belts are made of first quality vegetable tanned harness leather. Sewing is with genuine linen thread, hot waxed, lock stitched. Rivets are solid copper, hand set with burrs. Buckles, including tongues, and Dee Rings are steel drop forgings tested to 1500 lbs.

Catalog numbers prefixed by the letter "H" indicate belts fitted with Hank's Dee Rings which must be used with Hank's Safety Straps. All other makes are fitted with Standard Double or Single Bar Dees.

To insure proper fit select size that allows heel of Dee Rings to come about 1 inch in front of hip bones as per following table.

Distance Between Dee Rings, In....	20	22	22	24	26	28
Belt Size, In.....	36	38	40	42	44	46

## No. 5228 Klein's Leather Tool Belts

Made of one piece of soft pliable, tough russet latigo leather, doubled to form comfortable rolled edges and returned at each end. Cushion is  $4\frac{1}{2}$  inches wide at the center of the back and tapers to  $3\frac{1}{2}$  inches wide at the front. Body strap is first quality russet harness leather, 2 inches wide, stitched to the cushion at back and passing through loops at end of cushion as well as through the dee rings. A russet harness leather tool strap,  $1\frac{3}{4}$  inches wide with five loops in the  $1\frac{1}{4}$ -inch loop strap is carried on leather hangers from the body strap to which it is looped at the ends. This keeps the tool loops from contracting when belt is buckled on.

Constructed so that no rivets come through to inside of belt. Dee rings and buckle are single bar type solid steel drop forgings. All hardware tested to 1500 pounds. Galvanized finish. Fitted with leather pliers pocket, knife snap and tape thong, complete. Weight per dozen, 45 pounds.

## No. 5204-TSO Klein Texas Belts

Lined throughout with soft latigo leather. With standard dees.

Made 4 inches wide at center of back for full support, tapering to  $2\frac{1}{4}$  inches wide at hips to permit free bend to body of wearer.

Weight, 36 pounds per dozen.

No. 5204-TSO.....each \$24.70

## No. 5211 Klein Leather Tool Belts

Used by linemen, electricians, and mechanics.

Made of harness leather. Inner or cushion layer, 3 inches in width, is narrowed at each end to carry the D rings. Body strap, 2 inches in width, is riveted and stitched to the cushion and also passes through the D rings. Two tool straps are provided and formed into two loops at each side of the belt by riveting through the belt.

D rings and buckle are solid steel drop forgings galvanized to prevent rust, and are tested to 1500 pounds.

Belt surfaces taking wear of D rings are protected by copper safety liners riveted through the full thickness of the belt. Rivets are solid copper, hand set with burrs.

Sewing is with linen thread, hot waxed and lock stitched.

Available in sizes 36, 38, 40, 42, 44, and 46 inches. Other sizes on request. Weight per dozen, 34 pounds.

No. 5211, With Standard D Rings (Double Bar).....each \$16.50

## No. 5212 Klein's Derrick Belts

For oil derrickmen or structural workers.

Made to stand load of 250 pounds with a dead fall of five feet.

One three inch Forged Dee Ring at back for life line.

Double tongue buckle.

No. 5212, Weight, 42 Lbs.....each \$17.00

## Neatsfoot Oil

Keeps leather soft and pliable. Prolongs its life.

Supplied in cans with full directions for use.

Pint Can.....	each \$1.70
Quart Can.....	each 2.90
Half Gallon Can.....	each 5.20

## No. 5214 Klein's Steel Workers' Belts

Three forged Dee rings for attachment of line in most convenient position. Leather loop for wrench. Main belt passes through rings held in place by backing pieces of latigo leather stitched and riveted to belt proper. Two-inch buckle, double tongue type with solid forged frame. One-piece belt of harness leather, two inches wide.

Distance between outer Dee rings 24 inches. Adjustable from 36 to 44 inches. Made in one size.

No. 5214, Weight per Dozen, 28 Pounds.....each \$12.80  
No. 5214-O, Without Wrench Loop, Weight per Dozen, 27½ Pounds.....each 12.50

## No. 5209 Klein's Safety Harnesses

Back

Front

Meets requirements of various safety commissions for use where danger from gassing is present. Working in gassy manholes, gas tanks, oil tanks and even boilers, men are frequently overcome and an emergency arises instantly. This harness provides a sure means by which patient can be brought to safety and danger overcome. Design is such that it slings wearer in a perpendicular position so that he can be readily hauled through an ordinary manhole opening. A solid harness leather back plate 2¼x10 inches is stitched and riveted around the 1¼-inch adjustable belt strap. Back plate also carries a tested drop forged D ring to which the ¾-inch manila life line, 25 feet in length is permanently attached. Shoulder straps are ¾ inch and made adjustable and riveted to belt at single ends. These straps hold belt in position around chest so as not to encumber wearer while working. Weight per dozen, 75 pounds.

No. 5209, with Life Line.....each \$17.40

## No. 5206-1A Klein Leather Belts and Safety Straps

Made of harness leather. Belt has cushion 2¼ inches wide which carries the D rings. The outer or loop layer is 1½ inches wide formed into tool loops by riveting to the cushion. Also passes through the D rings.

The safety strap is 1¼ inches wide and 68 inches long. Has standard snaps and stainless clips.

All snaps, D rings, and buckles are solid steel drop forgings tested to 1500 pounds, and are galvanized finished.

The strap may be adjusted to any length by means of a

buckle or can be removed entirely from belt. Sewing is with hot waxed linen thread, locked stitched. Available in sizes 36, 38, 40, 42, 44, and 46 inches.

No. 5206-1A Weight per dozen, 62 pounds.....each \$26.80

**No. 5233 Klein Klein-Kord Safety Straps**

Has standard snaps, stainless clips.

Takes a load of 2400 pounds before ripping. Red center fabric made of 6 plies of long staple cotton of special weave, each ply laid in rubber and vulcanized. Size,  $1\frac{3}{4}$  in. by  $5\frac{3}{4}$  feet. Other lengths on order. No. 5233, Weight per Dozen, 36 Pounds.....each **\$13.70**

**Klein Klein-Kord Extension Snaps**

Used in conjunction with a fixed length safety strap. Provides the extra length necessary when working on large diameter poles.

Dimensions: length, 15 inches; width,  $1\frac{3}{4}$  inches.

Weight per dozen,  $16\frac{1}{2}$  pounds.

No. 5236, With Standard D and Snap.....each **\$6.30**

No. KL-5236, With Standard D and Klein-Lok Snap.....each **\$7.20**

**No. 5215 Klein's Extension Straps**

This strap is  $1\frac{3}{4}$  inches wide, made of first quality harness leather and fitted with special forged D ring and buckle. It is worn attached to D ring on main body belt and used when large diameter poles necessitate a longer safety strap than the regular. By engaging snap of the regulation safety strap to the special D ring on the extension strap the lineman can immediately adapt his outfit so that he has no difficulty in working conveniently. No matter how large the pole—can be lengthened or shortened.

Size,  $1\frac{3}{4}$ x15 inches.

Weight per dozen, 14 pounds.

No. 5215, Forged D Ring.....each **\$7.20**

**No. K.K.D.-025 Klein-Kord Dressing**

For use with Klein-Kord.

Put in  $\frac{1}{4}$ -pint cans.

Weight per dozen,  $4\frac{1}{16}$  pounds.

No. K.K.D.-025.....per can **\$ .60**

**Salisbury Non-Spillable P.B. Paint Pots**

This is a rubber container for carrying insulating and weather-proofing compounds that do not have an oil base.

Provides a safe and convenient means to carry both compound and brush, eliminating use of metal containers, glass bottles, and other makeshift devices.

Flange extends inward at junction of the neck preventing contents from spilling or splashing out during rough handling. Equipped with tapered cork through which a rubber-set brush is securely inserted.

Single compartment pot is for insulating only; double compartment pot is made with an extra receptacle to hold soldering paste.

**No. 5108 Klein's Inspectors' Harness Leather Tool Bags**

This bag is made of harness leather and will stand rough and hard usage. The leather does not absorb moisture.

Bag has a shoulder strap combined with a pad and hand strap. The bottom is three-ply and is protected with steel studs.

Retaining straps

pass clear around the bag so that it may be loaded to the limit of its capacity and be securely held intact. All seams are sewed with hot waxed linen thread, lock stitched.

**Klein's Linemen's Canvas Tool Bags****With Leather Bottoms**

This bag is made of one piece of white duck reinforced all around the bottom with heavy bag leather. The bottom is made of heavy leather outside and duck inside, lock stitched all around. The bottom is protected with strong steel studs. Bottom and sides are joined together with lock stitched leather welt seams.

Mouth of the bag is formed by a 12-gage steel frame. The canvas is clinched between this frame and an inside secondary steel frame.

Bag has harness leather handles and two retaining straps with buckles.

Linemen's bags can be furnished with lock and key, and shoulder strap at slight additional cost.

**No. 30 Salisbury Non-Metallic Tool Bags With Inside Utility Pocket**

Recommended as an essential part of line crew equipment. Provides an efficient method of raising tools, supplies and materials to the pole top.

Bag is collapsible, of sturdy construction, amply reinforced and designed throughout for heavy duty service.

Equipped with a utility pocket on the inside to accommodate small tools, bolts, washers, etc.

Made of duck with a single side seam together with top and bottom fastenings strongly sewed. The heavy leather bottom extends 3 inches up the sides.

A  $\frac{1}{2}$ -inch rope handle is firmly spliced to the bag through leather reinforcements.

Diameter, 12 inches. Height, 16 inches.

Weight,  $2\frac{1}{4}$  pounds.

**Salisbury Line Hose**

A convenient device for protecting linemen from accidental contact with energized lines. By completely

surrounding the wire with a substantial wall of voltage-resisting rubber more than ample insulation is provided.

The self-locking lip prevents the hose from being accidentally detached. Short bends can be made without exposing the conductor it covers.

Furnished in  $\frac{1}{4}$ ,  $\frac{3}{8}$ ,  $\frac{5}{8}$ , 1,  $1\frac{1}{4}$  and  $1\frac{1}{2}$ -inch sizes, inside diameter; in standard lengths of 3,  $4\frac{1}{2}$  and 6-foot pieces.

**Salisbury Connector End Line Hose**

Standard line hose with the additional feature of an integral built-on connector end which overlaps and securely holds the end of an adjoining piece of hose when longer spans of line are to be covered. Increases standard lengths by 8 inches.

The connector end is also useful in covering connectors, bulky tap joints, and leads on stud type transformers.

The connector end does not interfere with the application of the hose in normal uses and it is recommended that a portion of the hose on each truck be of this connector end type.

Furnished in  $\frac{5}{8}$ , 1,  $1\frac{1}{4}$ , and  $1\frac{1}{2}$ -inch inside diameters and in standard hose lengths of 3,  $4\frac{1}{2}$ , and 6-foot pieces.

**Salisbury Line Hose Connectors**

Used where two or more pieces of straight line hose are employed on one wire to prevent the pieces from slipping apart and to eliminate the possibility of the conductor being exposed between adjoining ends. Also used to overlap the ends of line hose separated by a bulky joint.

Shaped to fit the outside contour of the hose, the walls being extra thick to provide the necessary grip. A series of ribs placed on the inside surface give the connector a tight hold.

Length, 12 inches. Available in two sizes to fit over either  $\frac{5}{8}$  or 1-inch line hose. When ordering specify hose size.

**Salisbury Linemen's Blanket Canisters**

Used to protect linemen's rubber blankets from puncture or other injury when not in use and provide a safe and convenient container for blankets while being carried on the trucks or service cars and while retained in stations.

Constructed of strong galvanized iron.

Equipped with caps permanently fastened to the container by a chain. Canister and cap are made with beaded edges.

Available in the following sizes:

- No. 1 4-In. Diam. 37-In. Long, 1 Blanket, Wt.  $4\frac{1}{2}$  Lb.
- No. 2 5-In. Diam. 37-In. Long, 2 Blankets, Wt. 6 Lb.
- No. 3 6-In. Diam. 37-In. Long, 3 Blankets, Wt. 7 Lb.
- No. 4 7-In. Diam. 37-In. Long, 4 Blankets, Wt.  $8\frac{1}{2}$  Lb.
- No. 5 8-In. Diam. 37-In. Long, 5 Blankets, Wt.  $9\frac{3}{4}$  Lb.
- No. 6 9-In. Diam. 37-In. Long, 6 Blankets, Wt.  $11\frac{3}{4}$  Lb.

**Salisbury Rubber Insulator Hoods**  
**Universal Type**

Used in conjunction with line hose to cover tie-wires and conductors as they pass the insulators. Completely covers this point of hazard in a close fitting and positive manner. Can be used on double arm as well as single arm construction. The extending arms of the hood over-lap the ends of the line hose.

Compounded to secure high insulating qualities over a long period of time. Vulcanized in steel molds while under great pressure, in heavy duty presses; retains its shape and flexibility. Thick walls of solid rubber give it ability to stand up under severe conditions of use.

Requires no attachments to hold it in place. Securely locks itself to the under side of the insulator and cannot open, turn, slide or become accidentally dislodged.

Solid rubber flanges extending inwardly from under sides of the body portion serve to grip the under side of the insulators. Exterior ribs are placed to reinforce the side walls and to increase the grip.

Inside dimensions arranged so hood properly fits all popular types of pin insulators in distribution service.

Length,  $14\frac{3}{4}$  inches. Height,  $6\frac{1}{4}$  inches.

Weight, 4 pounds. Packed one to a carton.

Telephone and telegraph companies use a special hood shaped to fit telephone style insulators. As it is used on single arm poles only both extending arms of hood are of the same diameter and will snugly grip the  $\frac{1}{4}$ -inch size line hose. In ordering, specify Telephone Type.

**Salisbury Snap-On Blankets and Jackets**

Snap-On Jacket is especially useful in covering dead ends, pot heads, cutouts, arrestors, and like equipment which does not require the full size blanket.

Equipped with eight reinforced eyelet holes along each side and twelve hard

rubber buttons. When folded over or wrapped around the apparatus to be covered, the edges are held closed by snapping the small heads of the buttons through the opposite eyelets. This self-contained method of fastening has been thoroughly tried and found practical.

Guaranteed to resist 20,000 volts on acceptance tests for 3 minutes.

Size blanket,  $36 \times 36 \times \frac{1}{8}$  inches.

Size jacket,  $22 \times 22 \times \frac{1}{8}$  inches.

**Salisbury Rubber Protective Blankets****All Rubber—Black**

Will fold, wrap or hang suspended in any position to provide an insulating barrier between electrical workers and hazards adjacent to their working position.

Bead molded on all four sides to prevent tearing.

Guaranteed on acceptance tests to resist 20,000 volts for 3 minutes.

Plain		With Eyelets	
No.	Size, Inches	No.	Size, Inches
300	$36 \times 36 \times \frac{1}{8}$	300-E	$36 \times 36 \times \frac{1}{8}$
400	$27 \times 36 \times \frac{1}{8}$	400-E	$27 \times 36 \times \frac{1}{8}$

Prices upon application.

## Salisbury Electric All-Rubber Coats

Made of strong durable material, coated on the outside surface with high grade rubber and a frictioned coating on the inside. No metal is used in its construction.

The inner cuff of the double-storm cuff is made of pure gum rubber. The collar is of standard lay-down type. Reinforced at hips to protect coat from tool belt abrasion. Has raglan shoulders, all rubber fasteners and storm fly front.

Length, 46 inches.

Furnished in sizes 36 to 46.

Prices upon application.

## Salisbury Static-Resisting Line Coats

The special construction of this coat retards static tingling at the neck or wrists when the garment is used during wet weather on work that is adjacent to energized conductors.

Special features: Inside double back; special rubber fasteners; reinforced at belt; all seams sewed and cemented; insulating skirt collar; roomy raglan shoulders; insulating storm cuffs; storm fly front.

Guaranteed to be free from all defects in material or workmanship.

The all rubber collar is standard. Corduroy faced collar can be furnished if desired.

Furnished in sizes 36 to 46 inclusive. Length, 47 inches.  
Packed one to a carton.

## Salisbury Cable Bandages

For general use as temporary insulation. Made of highest grade pure gum rubber. Unusually strong, very flexible, with excellent ageing qualities. Acceptance tests prove that a single thickness can withstand 10,000 volts.

In rolls 14 feet long, 3 or 4 inches wide, 1/2 inch thick.

Net weight per 3-inch roll, 10 ounces; 4-inch, 12 ounces.

## Salisbury Switchboard Rubber Matting

A non-slip corrugated surface matting of high dielectric strength and long aging qualities.

Meets requirements of all standard specifications.

Guaranteed to resist 50000 volts for 3 minutes on acceptance tests.

Furnished in 1/4-inch thickness; 24, 30, 36 and 48-inch widths; lengths up to 75 feet. Other

widths and thicknesses can be furnished.

## Salisbury Rubbercuff Protector Gloves

Gives complete protection with its rubbercuff protector and not only gives greater safety but allows a substantial reduction in glove expense.

Most rubber gloves are destroyed through reason of snags occurring on the upper ends of the gauntlets. Ordinary protector gloves made of leather cannot extend to the rim of the rubber gloves because leather is a conductor of electrical current.

Cuff is made from light but strong fabric reinforced, voltage resisting rubber. Tests prove that current creepage over it is no greater than over gauntlets themselves. Hand part is made from high quality leather.

## Salisbury Linemen's Protector Gloves Full Gauntlet, 4-Inch Style

Designed to wear over Linemen's Rubber Gloves to protect them from snagging, tearing or abrasive wear. Made expressly for this work and should not be confused with the ordinary work gloves.

Made of specially tanned Grade A buffed horsehide, maroon color, and from selected weights.

Remains soft and pliable under all conditions and will not become

slippery when wet. Resists wire puncture to a great degree.

### Salisbury Steam Cured Linemen's Rubber Gloves

No. 90  
Straight Finger Style

No. 100  
Curved Finger Style

Qualities of high insulation, low leakage, strength, flexibility and long life are evenly balanced. Each of these essentials is raised to the highest possible value without lowering the standard of some other property.

All gloves are seamless, form fitting, accurate to size, with finger lengths and widths adjusted to best meet average conditions.

Both Nos. 90 and 100 are furnished in 10,000, 15,000, and 20,000-volt ratings. Class B, 10,000-volt, 14-inch gloves are standard; Class A, 10,000-volt, heavier weight gloves are available.

Guaranteed to pass the most thorough inspection and to meet the A.S.T.M. specifications. Replacement made or return accepted of any which fail under initial tests at their rated voltage or otherwise prove unsatisfactory at time of delivery.

Furnished in sizes, 9, 9½, 10, 10½, 11, and 12.

Packed 1 pair to a box.

### Salisbury Protective Rubber Sleeves

Formed and Vulcanized in Chromium Plated Molds  
Full Length

Used to protect the arms and shoulders from accidental contact with energized equipment. Fastened across the shoulders by an adjustable rubber strap and rubber buttons. New chest strap feature prevents top of sleeves from sliding back and is so positioned that it does not interfere in any way.

Guaranteed to resist 10,000 volts for three minutes on initial tests. Chocolate color.

No. 40-R, standard size, is usually found suitable. No. 50-L, large size, is for men of large build or for use over heavy clothing.

Packed 1 pair to a carton.

### No. G4767-2 Chance Temporary Jumper Clamps

This clamp, equipped with 5000-volt rubber-covered extra-flexible cable, is recommended for extra protection to linemen doing general low voltage maintenance work. Has large, positive, gripping surface.

Handle is of corrugated, medium hard rubber; will not break or crack if dropped from pole. Cable is easily and securely attached. Handle will accommodate 1-inch maximum overall diameter grounding cable.

No cable furnished.

Main line contact: maximum wire size, 750,000 CM stranded copper; minimum wire size, No. 10 solid copper. Jumper wire size: maximum, No. 2/0, 5000-volt flexible grounding cable. Length, 9 inches.

Weight each, 1¾ pounds.

### Chance Grip-All Clamp Sticks

This clamp stick is safe and easy to handle.

To open jaws it is necessary to release the safety catch. Safety catch closes automatically when jaws are closed.

Full universal action is obtainable; eye screw may be turned with clamp stick at 0° to 90° angle to screw axis.

Hardwood pole is 1½ inches in diameter; tested to withstand 75,000 volts per foot for five minutes.

Castings are aluminum and bronze.

### No. G1710-5 Chance 3-Wire Standard Grounding Sets

Has eye screw for use with clamp stick, no cable.

Cluster shown at right is made for grounding on any 3-wire construction. Also with clamps mounted on poles, single clamps mounted or unmounted. Clamps and cluster are bronze.

Main line contact: maximum wire size, 4/0 stranded copper, 3/0 ACSR. Jumper contact: maximum wire size, No. 2 ground cable. Overall length, 8 in. Weight, 4½ pounds.

## No. 4800-15 Chance Hot Line Maintenance Tool Sets

Aluminum Fitted for Light Weight, Efficiency

Complete Set for Two or Three Phase Lines

These Chance Hot Line Maintenance Tools represent the latest developments in equipment for making repairs on high voltage lines. The metal fittings are cast of heat treated aluminum alloy which makes them lightweight for ease in handling and has made possible many mechanical improvements.

The tool set shown above has been developed for making insulator changes, cross arm changes or pole changes on two or three phase straight line construction. The auxiliary arm may be used either as a side arm or as a lifting arm to lift the conductors above the structure. The set is available complete as shown or in parts as listed. Poles are laminated spruce tested to withstand 75,000 volts per foot.

No.	Reference	Description	Approx. Wt., Lb.

## No. 4800-10 Chance Standard Hot Line Tool Sets

Minimum essentials for working straight line construction have been selected for this set of Chance Hot Line Tools. The auxiliary arm is designed for use as a side arm but also may be used as a lifting arm by changing the position of the brace and mounting the arm on the wire tong for lifting. Wire tongs and saddles are generally used for laying conductors out into the wire holders on the auxiliary arm and for holding the conductor, on the opposite side of the pole, in the clear.

This tool set may be used for two or three phase lines. Metal fittings are heat treated aluminum alloy. Poles are laminated spruce, tested to withstand 75,000 volts per foot.

## Chance Wire Tongs

Use of heat treated aluminum castings has made possible several improvements in design and operation of Chance Wire Tongs without increasing their weight. Width of jaws has been increased to handle larger conductors. New actuating screw is faster and easier to operate, only 6 turns from fully open to fully closed on the 2-inch size being needed as compared with 12 $\frac{1}{8}$  turns with the former design. Poles are laminated spruce and are tested to withstand 75,000 volts per foot for five minutes.

## Chance Rigid Auxiliary Arms

The Chance Rigid Auxiliary Arm can be used as either a lifting arm or side arm. Safety brackets at each end prevent the conductor from slipping off accidentally during the change over. The arm is fastened to the pole by the quick action, safety locking Chance Chain Tightener and braced by a laminated pole. Ratings are 200 pounds per conductor holder on 7 and 8-foot arms and 150 pounds per conductor holder on 10-foot arm. Use of heat treated aluminum alloy fittings has reduced weight of 7-foot arm from 35 pounds to 28 $\frac{3}{4}$  pounds. Weight reduction in other sizes is comparable.

No.	Description	Weight Pounds
M4800	7-Foot Rigid Auxiliary Arm Complete with Two Wire Holders.....	28 $\frac{3}{4}$
M4800-1	8-Foot Rigid Auxiliary Arm Complete with Three Wire Holders.....	31 $\frac{1}{8}$
M4800-2	10-Foot Rigid Auxiliary Arm Complete with Three Wire Holders.....	33 $\frac{1}{8}$

## No. M4800-35 Chance Temporary Distribution Cross Arms

This lightweight Chance Temporary Distribution Cross Arm is designed for changing four or six pin arms or insulators on voltages up to 4 kv. in urban areas where spans are short.

Folding arms permit it to be lifted by hand line through phases to position on pole.

Bottom of cross arm pole is applied with Chance Chain Tightener, top with adjustable strap arrangement.

This unit is rated for 100 pounds per hook, using six lines at once. Hooks are spaced 14 inches apart for sufficient insulation.

Lift pole, 8 feet by 2 $\frac{1}{2}$  inches.

Hinged arms, 4 feet by 2 inches.

Weight, 30 pounds.

### Chance Adjustable Platforms With Attachments

The use of heat treated aluminum alloy fittings has made possible the addition of twin braces and a reinforcing keel piece to the Chance Adjustable Platform with little increase in weight. Other special features include attachments for converting this platform for tower use or for changing it into a pivot type platform which will rotate through 180 degrees on pole or tower. These pivot attachments—both pole and tower—eliminate the necessity for buying a separate platform. Platforms are equipped with the lightweight, safe locking Chance Chain Tightener. Rope railings 24 inches high may be ordered separately.

No.	Description	Length of Platform Feet	Working Load, End of Platform Pounds	Approx. Weight Pounds
M4901-2	Pole Type Adjustable Platform	6	500	42 $\frac{1}{4}$
M4901-3	Pole Type Adjustable Platform	8	500	49 $\frac{1}{4}$

M4901-12	Pivot Type Pole Attachment	6	...	28
M4901-13	Pivot Type Pole Attachment	8	...	28 $\frac{1}{2}$
M4901-16	Tower Clamps for Pivot Type Pole Attachment	6 or 8	...	13 $\frac{1}{2}$
M4901-14	Pivot Type Tower Attachment	6	...	30
M4901-15	Pivot Type Tower Attachment	8	...	30 $\frac{1}{2}$
M4901-35	Rope Railing	6	...	12 $\frac{1}{4}$
M4901-45	Rope Railing	8	...	13 $\frac{1}{8}$

### Chance Universal Poles

Chance Universal Poles are designed for attaching a variety of fittings making one tool do the work of several, eliminating the need for carrying a pole for each tool. Notches on heads dovetail with those on individual fittings and connections are easily tightened by hand with the wing screw. Standard lengths are 8 feet or two 4-foot sections spliced. Longer poles may be obtained if desired.

No.	Description	Pole Diameter Inches	Pole Length	Weight Pounds
M1760	With Tie Wire Assistant, One Head	1 $\frac{1}{4}$	8'	3
M1760-1	With Cotter Key Assistant, One Head	1 $\frac{1}{4}$	8'	3
M1760-2	With Tie Wire Assistant and Splice	1 $\frac{1}{4}$	Two 4' Lengths	5
M1760-4	Tie Wire, Cotter Key Assistant, Two Heads	1 $\frac{1}{4}$	8'	3 $\frac{1}{16}$
M1760-6	Tie Wire, Cotter Key Assistant, Splice and Two Heads	1 $\frac{1}{4}$	Two 4' Lengths	5 $\frac{1}{8}$

### Chance Universal Emergency Storm Tools

The Chance Universal Storm Tool is a short length of pole equipped with special insulator skirts. Pole has a universal head on one end and a universal spline fitting on the other for attaching to a standard universal pole. Its purpose is to do hot line work when rain, sleet, or heavy snow make the use of regular tools hazardous. Hoods prevent water stream from running down pole. Tool should be used for a limited time and considered an emergency tool.

No.	Description	For Working on Voltages
M4455-64	Two Insulator Skirt Tool	23 kv.
M4455-65	Three Insulator Skirt Tool	34 kv.

### Chance Wire Tong Saddle and Clamp

This pole attachment for wire tongs used in hot line work is made of heat treated aluminum alloy. It is quickly attached and securely held with the Chance Safety Chain Tightener. A clevis attachment for blocks eliminates binding, for the blocks swing with the wire tong. Clamp has stainless steel liner.

No.	Size Inches	Approx. Weight Pounds
M4740-3	1 $\frac{1}{2}$	8
M4740-4	2	8 $\frac{3}{16}$
M4740-5	2 $\frac{1}{2}$	8 $\frac{3}{8}$
M4740-9	3	8 $\frac{1}{2}$

## Chance Prong and Blade Type Tie Sticks

Fixed Two and Three Prong Tie Sticks with \*Universal Heads on the opposite end are used for manipulating tie wires. They are especially desirable for ties with looped ends and may also be used for pulling disconnects, installing cumalongs, etc. The third prong is a short, stubby finger which aids in making short bends with tie wire.

Fixed Blade Tie Stick with \*Universal Head on the opposite end is primarily used for removing insulator ties which do not have looped ends. Recommended for replacing ties which have had their looped ends kinked or burned off.

Rotary Blade Tie Stick with \*Universal Head on opposite

end handles tie wires with or without looped ends speedily and easily. Swivel action permits full turn on tie wire without releasing contact. A tie wire assistant is attached to the pole for prying up tie wires which do not have looped ends.

Rotary Prong Tie Stick with \*Universal Head on opposite end is used for replacing or removing insulator ties with looped ends. Hook swivels freely to aid in maneuvering tie wire.

\*Universal head on opposite end of pole is used for attaching other line tools making this two tools in one. Available also without universal head.

No.	Description	Pole Length Feet	Weight Pounds
M1855-17	Fixed 2-Prong Tie Stick with Universal Head	8	3 $\frac{3}{4}$
M1855-20	Fixed 3-Prong Tie Stick with Universal Head	8	4
M1855-6	Fixed Blade Tie Stick with Universal Head	8	3
M1855-26	Rotary Blade Tie Stick with Universal Head	8	2 $\frac{7}{8}$
M1855-19	Rotary Prong Tie Stick with Universal Head	8	2 $\frac{7}{8}$

## Chance Lever Type Wire Cutters

Use of aluminum alloy fittings has made it possible to reduce the weight of the 4-foot Chance Lever Type Wire Cutter by two pounds and yet change from spruce to hardwood in the pole for greater strength and rigidity.

Operator is insulated from cutting head by fiber operating rod.

No.	Pole Length Feet	Recommendations	Weight Pounds
M1871-4	4	Cutting Maximum of 2/0 Hard Drawn Copper or ACSR Wire	6 $\frac{1}{4}$
M1871-6	6		6 $\frac{3}{4}$
M1873-4	4	Cutting Maximum of 2/0 Weatherproof Stranded Copper, 4/0 Hard Drawn Copper, or 4/0 ACSR Wire	9 $\frac{1}{4}$
M1873-6	6		11

## Chance Rural Dead End Strain Carriers

This strain carrier simplifies and speeds up changing dead end insulators on transmission lines up to and including 23 kv.

Handles insulators up to 10 inches in diameter.

Semi-corner fitting with clevis at the back for engaging conductor clamps on semi-corner construction may be ordered separately.

No.	Description	Take-Up Inches	SPAN BETWEEN ROCKER —ARM AND BRACKET, IN.— Minimum Maximum	Maximum Working Load Pounds	Approx. Weight Pounds
M1843-6	Strain Carrier for 10-Inch Maximum Insulators	4	17 47	2500	16
M1843-7	Strain Carrier for 10-Inch Maximum Insulators	4	17 71	2500	20
M1843-8	Semi-Corner Fitting	..	.. ..	....	1 $\frac{1}{16}$

No. 730 Diamond N Drill Points

Made of steel.

Drills are carefully tempered to insure sufficient hardness at the point to withstand the wear of cutting and the temper is drawn away toward the shank, so as to produce a softer steel where it enters the handle to prevent its breaking off at that point.

May be used with Diamond Drill Holders Styles A, B and C and Diamond Hammer Drills.

No. 745 Style A Diamond Drill Holders

Forged from solid bar of Vanadium tool steel. Has a rubber guard.

Fits Di-Forge and Diamond N points. Shipping weight per dozen, 9 pounds.

No. 745.....per dozen \$27.00

No. 750 Style B Diamond Drill Holders

A hand drilling tool made of steel. Either Diamond N or Di-Forge drill points may be used. Weight per dozen, 8 1/2 pounds.

No. 750, without Points.....each \$2.00

No. 755 Diamond Rubber Grip Drill Holders Style C

Overall length, 6 1/4 inches. Weight per dozen, 10 1/2 pounds.

No. 755.....per dozen \$48.00

## Peirce Lead Sleeve Expansion Bolts

Galvanized

Consists of a steel bolt with a wedge or cone shaped head, tapering toward shank and provided with a lead sleeve.

## No. 31 Peirce Expansion Shields

Used with wood or lag screws for masonry attachments.

Size screw, Nos. 20 and 22. Shield: diameter, 1/2 inch; length 2 inches.

Shipping weight per 100, 12 pounds.

No. 31 . . . . . per 100 \$18.70

## Peirce Hammer Drills

Holes may be drilled in masonry with this drill in about one quarter of the time required by ordinary methods. The hazard of injured hands is also completely eliminated. Jammed drill points are quickly removed and most important, holes are neatly and quickly drilled. The outer end of the hammer drill is hollow for tamping lead sleeves. Chuck takes all sizes of drills.

No. ....	50	53
Per 100 .....	\$2608.53	2778.28
For Tamping Bolt .....	inches 1/4	3/8
Ship. Weight per 100 .....	pounds 825	880

## Peirce Drill Points

Made of fine tool steel, carefully tempered to the proper hardness and toughness. Two inches of the point is contained in the chuck.

Special sizes up to 1-inch diameter and any length can be furnished to fit Peirce Hammer Drill Chucks.

No.	Per 100	Drill Diam. In.	Overall Drill Length In.	Bolt Diam. In.	Shipping Wt. Lb. per 100

### Unique Gasoline and Kerosene Blow Torches

No. 3

No. 7

For heavy duty hard service under severe weather conditions and applications requiring large volume of flame and extra heat.

Flame,  $1\frac{1}{2} \times 12$  inches, 2000°F. Flame can be regulated to small jet.

Closing the valve forces slender cleaning needle through orifice, keeping it clean and full size.

Has replaceable, threaded needle and orifice block, and removable channel plugs for cleaning, and powerful, dependable pump.

### No. 0 Unique Gasoline Blow Torches

#### 1-Pint Capacity

A compact torch for the tool kit; for use in places hard to get at. Produces an intense heat of 1900°F. plus. Burns in any position. Fine flame control. Closing fuel valve forces the steel cleaning needle through orifice, clearing it of foreign particles. The needle, threaded orifice block and all other parts are replaceable. Channels fitted with removable threaded plugs for cleaning.

Steel tank, brazed fittings, and welded construction for safety. Top filler opening. Oval tank is  $2\frac{3}{4}$

inches through center; 5-inch circle. Size flame,  $1 \times 6$  inches. Weight, 3 pounds. Generator wind-shield included.

No. 0.....each \$7.33

### No. 1 Unique Gasoline Blow Torches

#### 1-Quart Capacity

A medium, small flame torch. Produces an intense heat of 1900°F. plus. Burns in any position. Fine flame control. Closing fuel valve forces steel cleaning needle through the orifice, clearing it of foreign particles. Cleaning needle, orifice block and all parts replaceable at small cost. Channels are fitted with removable threaded plugs for cleaning.

Steel tank, powerful pump, brazed fittings, and welded bottom for safety. Filled through bottom funnel filler. Size flame,  $1 \times 6$  inches.

Weight,  $3\frac{3}{4}$  pounds.

No. 1.....each \$7.33

### No. 50 Unique Heavy Duty Gasoline Public Utility Furnace

With Style A Hood

Melts 50 pounds of solder in 10 minutes. Flame, 2000°F,  $\frac{1}{2} \times 12$ -inch length. Extra fine flame control which holds steady without change.

Generator is made of bronze alloy casting, fitted with replaceable orifice block and removable channel plugs.

Tank is made of heavy steel, welded throughout.

Top-Plate has ample support for large kettles and solder pots up to 8-inch size. Handle locks to support solder iron.

Hood. Style A is standard and has open top. Style B hood (for solder irons) may be substituted and accommodates irons up to 12 pounds per pair. Heating time, 4 minutes. Style A hood is furnished as standard.

Tank capacity,  $1\frac{1}{2}$  gallons. Dimensions,  $9\frac{1}{2} \times 13$  inches.

No. 50, Weight 15 Pounds.....each \$22.33

No. 50 Generator

### No. 58 Unique Kerosene Heavy Duty Public Utility Furnaces

Melts 50 pounds of solder in 10 minutes. The figure 8 generator burns the fuel without carbon formation, producing a clean flame of 2000°F.

Orifice is cleared of foreign particles by turning flame control valve while furnace is burning.

Tank is made of heavy steel, welded throughout.

Top-Plate has ample support for large kettles and solder pots up to 8-inch size. Handle locks to support solder iron.

Hood. Style A hood is standard and has open top. Style B hood (for solder irons) may be substituted and accommodates irons up to 12 pounds per pair. Heating time, four minutes.

Tank capacity,  $1\frac{1}{2}$  gallons. Dimensions,  $9\frac{1}{2} \times 13$  inches.

No. 58, Weight 15 Pounds.....each \$22.33

Figure 8 Generator and Orifice Scraper

### No. 3420 Klein's Staysalite Linemen's Torches

This torch burns alcohol without odor or noise and stays lit in a wind.

Light and small and is lit or extinguished in a moment, as wanted. Has no adjusting parts.

The Staysalite is carried in the lineman's belt and eliminates the ground man; can be hung directly on the wire under joint to be soldered.

Provided with a cup for holding soldering paste. Can be used as a small heater or for soldering iron.

Weight,  $1\frac{1}{4}$  pounds.

No. 3420.....each \$13.30

## Unique Safety Folding Shields

For Furnaces and Firepots

No. 50

No. 50-C

Protects workers and by-standers from hot materials and shields furnace from wind. Affords a protective spot for tools and accessories.

Galvanized iron with edges rolled around 1/4-inch rod. Rust proofed. No sharp corners. Folds flat for carrying and storing.

No. 50 is a four-panel shield with welded steel grate and supporting brackets for large pots and kettles. Grate hooks on bracket to hold shield in open position.

No. 50-C is a three-panel shield without grate

No. 50 Weight, 15 pounds.....each \$16.66  
No. 50-C Weight, 27 pounds.....each 8.00

## Unique Air Cooled Balanced Ladles

Wood Handle (Round, 1 1/8-Inch Diameter)  
Cut Away to Show Method of Attaching

Comfortable insulated, "close to the bowl" grip eliminates strain, and makes it easy to direct and control the flow of molten metal.

Made of pressed steel and treated so that solder cannot stick.

Wood handle can be easily and inexpensively replaced.

Bowl Diameter.....inches	2 1/2	3	3 1/2	4
Each.....	\$1.40	1.50	1.70	1.80
Capacity.....pints	1 1/2	1 3/4	2 1/8	2 1/2
Weight.....ounces	10	12	14	16

## Unique Air-Cooled Solder-Copper Handles

Shank contact with wood is minimized. This safe handle won't let go—the piano wire grip contracts and expands with the shank—a tight grip always. Simply drive the handle over the pointed shank—no special tools required.

## Soldering Coppers

Made of drawn copper bolts of the best quality and shaped like a hammer. By this method they are as solid as metal can be made, are better heat retainers and should not be compared with such as are cast from copper ingots.

Weight, per Pair.....lbs.	3/4	1	1 1/4	1 1/2
Soldering Coppers.....each				

## Ideal Commutator and Slip Ring Resurfacers

### Commutator Resurfacers

**Extra Coarse.** Exceptionally fast cutting. For "hogging" off excessive copper or other metals.

**Coarse.** Fast cutting. For use where a fair amount of copper or other material is to be removed.

**Medium.** For general utility, high mica, small ridges and burns.

**Finish.** For use after three grades above, bringing the surface to a velvet which quickly becomes a gloss after the brushes have been lowered. Used particularly for periodic application, and for the removal of small burns and ridges, immediately after their appearance.

**Polish.** An excellent grade, which gives a burnished finish. Made of an exceedingly fine, 220-grain aggregate.

### No. 81 Slip Ring Resurfacers

Designed especially for grinding steel and cast iron slip rings. This resurfacer is a slight conductor and should be used with the current off and no load on machine.

**Coarse No. 81.** For rapid grinding and for removing large quantities of material.

**Medium No. 81.** For general utility and removing small pits and burns.

**Finish No. 81.** For final application after Coarse No. 81 or Medium No. 81 has been used.

### Pencil Type (No Handle)

For fans or signal motors, auto generators, locomotive headlight motors and other fractional horse power motors.

### Straight Handle Type

Used primarily on inaccessible types of commutators on small or enclosed motors.

There are four standard sizes, but other larger sizes can be made to order.

### Vertical Adjustable, Tramway and Railway Handle Types

These three types of resurfacers are for use on medium size motors and small generators.

**Vertical Adjustable Handle.** The knob handle is fastened permanently. The extra rod handle makes this type universal to meet practically all conditions. The knob is drilled on two sides, also on the top, so that the rod handle can be adjusted to any one of three positions.

**Tramway Handle.** This is a stout handle with a good grip, permanently mounted at a 45° angle.

**Railway Handle.** This is a stout handle with a good grip, permanently mounted in a vertical position.

### Wood Block Handle or Tool Type

For use in Ideal Precision Grinders or any type of lathe truing device. Equipped with wood block handle for clamping rigidly into the grinder.

### U Handle and Saw Handle Types

These types are for use on large motors, small rotary converters, motor-generator sets, telephone generators, etc.

**U Handle.** Preferred when the stone is to be used with the handle parallel to the brush arm.

**Saw Handle.** Desirable when the stone is to be used with the handle at right angles to the brush arm.

Double U Handle and Double Saw Handle Types are also available.

### Slip Ring Types

To secure the most efficient grinding results, specify material from which rings are made, such as iron, steel, bronze, or brass. When space permits, use a resurfacer, about 1 inch wider than the ring, bridging over the entire width. Resurfacer should be three times as long as the flat spots as bridging over them assures a perfect job.

### "2-in-1" Pocket Type

For all-around shop practice. Made up in any combination of the five grades, two grades being cemented together.

Prices and Complete Information Sent on Request

## Condensed Listing of Ideal Commutator Motor Winding and Repair Shop Tools

### Brush Seaters

For seating carbon, graphite or metal-composition brushes.  
Standard size: length,  $4\frac{3}{4}$  inches; face,  $1\frac{1}{8} \times \frac{5}{8}$  inch.  
Per Dozen..... \$6.00

### Portable Precision Grinders

**No. 24-004 Perfect Model.** A high grade precision tool for use with Ideal Tool-Type Resurfacers. Adaptable to all open type commutators and rings. Furnished in any one of fifteen different lengths, ranging from 6 to 36 inches inclusive by 2-inch variations.

Shipping weight, 12-inch size, 45 pounds.

**No. 24-004, with 12-Inch Bed Plate, Including Brush Arm Supports.**.....each \$110.00

**No. 24-020 Ideal Model.** Designed especially for use in close quarters or on machines with outboard fans, large bearing pedestals, or close end frames. Furnished in the same lengths as the No. 6 Perfect Model.

Shipping weight, 12-inch size, 45 pounds.

**No. 24-020, with 12-Inch Bed Plate, Including Brush Arm Supports.**.....each \$140.00

**No. 24-033 Midget Model.** Designed especially for use on small commutators having a face width of 8 inches or less, as well as for use on medium-sized slip rings. For use with Ideal Tool-Type Resurfacers. Compact design allows working in small spaces.

Shipping weight, 20 pounds.

**No. 24-033, with Brush Arm Supports.**.....each \$72.50

### Commutator Turning Tool Heads

An excellent tool for removing the bead or ridge of copper left on the inside of the commutator next to the riser.

Net weight, 7 pounds.

**No. 24-045, for Perfect and Ideal Model Precision Grinders.**.....each \$31.50  
**No. 24-046, for Midget Model Precision Grinders.**.....each 27.50

### No. 25-029 Universal Power Mica Undercutters

Cuts smoothly without vibrations. May be used in space only  $2\frac{3}{4}$  inches wide.

Weight, including motor, 52 pounds.

Complete with Standard 115 Volt A.C. 60 Cycle Motor.....each \$140.00  
Complete, but without Motor; with Motor Shaft Connection.....each 120.00

If desired, other voltages and cycles can be furnished at extra charge; also undercutters for d.c.

### No. 25-023 Shop Type Undercutters

This undercutter is light enough for easy handling, and sturdy enough for continual heavy duty undercutting.

Net weight of head only,  $2\frac{3}{4}$  pounds.

**No. 25-023, without Motor.**.....each \$120.00

### Direct Drive Undercutters

Intended primarily for field use, but the rugged, sturdy design makes this undercutter suitable also for shop use.

Weight, with 8-foot cord,  $5\frac{3}{4}$  pounds.

**No. 25-001, with 115V. Universal Motor.**.....each \$90.00  
**No. 25-002, with 230V. (Also 250-Volt) Universal Motor.**.....each 98.00

### Commutator Saws and Milling Cutters

Made of Special No. 1 High Speed Steel. Available in all types and sizes, not only for the Ideal Undercutter, but any type of undercutter. Available in outside diameters from  $\frac{1}{4}$  to  $1\frac{1}{2}$  inches inclusive. Prices on application.

### Slotting Files

Specially designed and constructed for commutator use. Weight per dozen, 1 pound.

**No. 20-007, Large 8-Inch Type.**.....each \$1.06  
**No. 20-009,  $9\frac{1}{2}$ -Inch Single End Type (Specify Draw-Cut or Double-Cut).**.....each .89

### No. 20-006 Hand Type Commutator Mica Slotters and Scrapers

Designed for use on small commutators, and for plants which do not have sufficient work for a power driven unit.  
**No. 20-006.**.....each \$2.95

### Balancing Ways

Indispensable for the static balancing of motor armatures, crank shafts, pulleys, fly wheels, etc.

No.	19-006	19-007	19-008
Each.....	\$48.83	55.89	37.36
Capacity.....pounds	1000	1000	400
Approximate Shipping Weight.....pounds	13	48	108

Longer shafts can be furnished at slight extra charge.

### Growlers

Used to quickly locate grounds and shorts.

**Type U-2.** Used as an external growler for armatures and as an internal growler for stators.

**Type S.** Contained in oblong cases; made in two sizes, with and without meters.

**Type F.** Made with a built-in feeler, and shaped to test armatures and stators.

Specifications and prices will be furnished on request.

### No. 41-001 Insulation Testers

Indicates in a second whether or not there is a short, ground or broken wire. Suitable for testing insulation of low voltage equipment. Capacity, 500 to 2500 volts.

For 115 volts, 50-60 cycles. Weight, 15 pounds.

**No. 41-001.**.....\$55.89

### No. 16-003 Armature Winding Heads

Winds small universal, shaded pole, two pole d.c. or repulsion induction motor armatures.

Net weight of head, 2 pounds.

**No. 16-003.**.....each \$60.00

### Coil Winder Heads

**No. 16-002 Midget Model.** For making coils  $4 \times 1\frac{1}{8}$  inches minimum up to  $8\frac{1}{2} \times 6\frac{1}{2}$  inches maximum.

Weight, 10 pounds.

**No. 16-002.**.....each \$61.77

**No. 16-001 Universal Model.** Winds coils up to  $13 \times 16\frac{1}{2}$  inches. Weight, 35 pounds.

**No. 16-001.**.....each \$75.89

### No. 15-028 Coil Winder Drives

Gives an infinite number of driving speeds between 120 and 650 rpm. by moving control lever.

Weight, approximately 180 pounds.

**No. 15-028, Complete, 115V. 60 Cycles.**.....each \$464.71

### No. 16-004 Armature Winding Yokes

Winds any type armature with a shaft 9 to 19 inches long. Weight, 28 pounds.

**No. 16-004.**.....each \$85.29

### No. 16-006 Armature and Stator Holders

Ideally suited for holding work while soldering commutator leads, inserting insulation, inserting wedges, banding armatures, rewinding, removing and inserting coils on stators or armatures, etc.

Approximate shipping weight, 40 pounds.

**No. 16-006.**.....each \$40.59

### No. 45-070 Brush Type Wire Strippers

Cleans enamel wire rapidly. Cleanly strips cotton and enamel, silk and enamel, string asbestos and similar types of light insulation from round wire, flat or rectangular wire, or solid or stranded wire.

Net weight, approximately 50 pounds.

**No. 45-070 Complete, 115V., 60 Cycles.**.....each \$223.53

### No. 45-009 Rotary Type Wire Strippers

This powerful, motor-driven wire stripper is needed wherever volume stripping is done. Strips wire up to  $\frac{1}{2}$ -inch outside diameter. Net weight, 45 pounds.

**No. 45-009 Complete.**.....each \$147.06  
**No. L-2440, Extra Blades.**.....per set 3.95

## National Carbon Brush Assortments

### For Fractional Horsepower Motors

Brushes for vacuum cleaners, fans, vibrators, electric ironers, washing machines, sewing machines, food and drink mixers, heat regulators, pumps, electric tools, cash registers, and office appliances.

Container is designed for effective counter or store display.

All brushes and springs are of the finest quality and will take care of replacement

on fractional horsepower motors (a.c., d.c., and Universal) used on the popular makes of home, office and shop appliances and equipment.

Sizes range between  $\frac{5}{32}$  and  $\frac{5}{16}$ -inch square with 10 intermediate sizes of round and rectangular brushes including three types of brushes with shunts, springs and terminals. Springs are made of the best phosphor bronze wire.

**No. 40 Assortment.** Contains 102 brushes of 17 types and sizes (3 sizes complete with shunts, springs, and terminals) and 55 springs in 3 sizes.

**No. 40 Assortment Complete**.....each **\$8.50**

**No. 55 Assortment.** Contains 198 brushes of 17 types and sizes (3 sizes complete with shunts, springs, and terminals) and 100 springs in 3 sizes.

**No. 55 Assortment Complete**.....each **\$14.50**

## No. 2560 Lyon Portable Work Benches

Used by maintenance men, millwrights, mechanics, and supervisors of mobile assembly and production lines. All the features of Lyon steel top work benches are contained in portable benches and all standard accessories may be used.

Bench casters are stationary type. Wheelbarrow type handles slide under bench top and out of the way when not in use. Green baked-on enamel finish. Length, 72 inches. Depth, 34 inches.

**No. 2560, Weight, 218 Pounds**.....each .....

## No. 3020 Lyon Tool Cabinets

Designed to hang on a wall or be used on a bench. Back and sides punched on 1-inch centers for  $\frac{1}{2}$ -inch pegs.

Tamper proof hinges. Strong three point latching device.

Complete with shelf, socket tray and ten adjustable pegs.

Green baked enamel finish.

No.....	<b>3020</b>
Each.....	<b>\$14.75</b>
Width.....inches	24
Depth.....inches	12
Height.....inches	33

Wt.....lb.	130.9	128.3

\*Same as No. 2250 plus swivel casters. Front casters have foot controlled locking lever.

## No. 2252 Counter Type

Same top and drawer as No. 2250. When used on counter or bench, desk is at convenient height to work while standing or seated on a stool.

Green baked-on enamel finish.

No.....	<b>2252</b>
Each.....	<b>\$20.75</b>
Width.....inches	34 $\frac{1}{2}$
Depth.....inches	30
Height.....inches	17
Weight.....pounds	79.7

## Lyon Tool Stands

No. 3107

Used in machine shops, printing plants, assembly lines, stock rooms, repair shops, garages, toolrooms, service stations, maintenance departments, laboratories, restaurants and vocational schools.

In factories, used as work stands around production machines, mountings for small tools, parts containers for assembly lines, etc.

In restaurants, used as salad tables; in laboratories, as portable work centers; in printing plants, as ink stands; in garages, as tool and part carriers, etc.

Available in stationary and portable models.

Trays attach at each corner with four bolts, all are interchangeable and punched for attachment of drawers. Legs are formed from band steel, curled at bottom to hold glide feet or swivel type casters.

Drawers have padlock attachment, padlock not furnished and a sliding tool tray.

Green baked-on enamel finish.

For further information on  
the complete line of  
**LYON SHOP EQUIPMENT**  
consult your nearby Graybar office.

**No. 3160 Lyon Tool Toters**

Used in machine shops, power plants, plumbing shops, electrical shops, toolrooms, printing plants, welding shops, and maintenance departments.

Built-in drawers operate in a closed case that strengthens entire totter and assures continued drawer alignment. Padlock hasp on cross piece locks both drawers at one time, padlock not furnished. Top and bottom trays have 1½ inch flange. Steel swivel casters. Riveted construction. Width, 18 inches. Depth, 24 inches. Height, 34½ inches. Drawer size, 15x23x4½ inches.

Green baked-on enamel finish. Weight, 78 pounds.

No. 3160.....each **\$16.65**

**Style H Lyon Steel Stacking Boxes**

For heavy loads from 75 to 125 pounds and to withstand hard usage.

Made of 18-gage steel.

Shallow V shaped runners make it ideal for gravity conveyor use. Tapered for efficient stacking. Stacking rail at each end strengthens entire box.

No.	3600	3601	3602	3603
Each.....	<b>\$2.25</b>	<b>2.40</b>	<b>2.35</b>	<b>2.55</b>

Weight.....pounds	12.5	12.5	13.8	13.8

**Style R Lyon Steel Stacking Boxes**

For handling and storing medium loads. Particularly rigid when stacked because inside supporting rail extends around all four sides.

Made of 16-gage steel.

Three piece construction. Reinforced corners. Drop handles.

Width, 10 inches. Length, 20 inches. Height, 8 inches.

Weight, 16.4 pounds.

No. 3610, without Finish.....each **\$2.10**

No. 3611, Green Finish.....each **2.25**

**Style RB Lyon Steel Stacking Boxes**

A strong stacking box used also for transportation between operations.

Made of 16-gage steel.

May be stacked on floor and used for regular bin type storage. Hopper end permits easy removal of contents.

Front top rail rounded for use as handle. Opposite end has drop handle.

Width, 10 inches. Length, 20 inches. Height, 8 inches.

Weight, 15.4 pounds.

No. 3620, without Finish.....each **\$2.30**

No. 3621, Green Finish.....each **2.50**

**Style L Lyon Steel Nesting Pans**

For handling parts safely and economically. Pans can be nested. A stack of 50 is only 43 inches high.

Made from a single sheet of folded steel.

Four thicknesses where hem overlaps corner braces. Integral handles are double thickness. Width, 11 inches. Length, 22 inches. Height, 6 inches.

No.	3630	3631	3632	3633
Each.....	<b>\$1.45</b>	<b>1.70</b>	<b>1.30</b>	<b>1.50</b>
Gage Steel.....	16	16	18	18

Weight.....pounds	12.5	12.5	9.6	9.6

**Lyon Tool Boxes and Trays****Tool Boxes**

Heavy duty tool box that protects tools and provides carrying case. Full-length, piano type hinge. Padlock attachment, padlock not furnished. Width, 7 inches.

Greenbaked-on enamel finish.

Tray is furnished, when specified, at additional cost.

No.	2301	2303
Each.....	<b>\$2.70</b>	<b>2.80</b>
Length.....inches	19	22
Height.....inches	6½	6
Weight.....pounds	12.1	13.3

**No. 2310 One-Piece Steel Tool Trays**

Ends overlap sides and are clamped tight under the ½-inch flange, in addition to being securely welded.

Full length handle, attached to each end with rivets, is shaped to fit the hand. Length, 17½ inches. Width, 8½ inches. Height, 4½ inches. Overall height, 8½ inches.

Green baked-on enamel finish.

No. 2310, Weight, 10 Pounds.....each **\$1.50**

**No. 4191 Lyon Sloping Front Tool Storage Units**

Provides 88 openings in 8 depths. Shelf dividers adjustable every inch with patented snap-ins. Labelholders on each shelf.

Width, 34¼ inches. Depth, 17½ inches. Height, 37⅞ inches.

Green enamel finish.

Weight, 120.0 pounds.

No. 4191.....each **\$31.10**

## Lyon Steel Cabinets

No. 1000 Storage Cabinet

No. 1010 Combination Cabinet

Used in factories, printing plants, offices, hospitals, and service stations. Front corners are rounded. Type of construction eliminates bolt heads on front and sides. Cabinet has polished chrome handles and built-in locks. Three point locking device. Double doors swing open full 180 degree angle. Has four shelves adjustable every 2 inches without tools. Extra shelves may be added if required. Width, 36 inches. Depth, 21 inches. Height, 78 inches. Green baked-on enamel finish.

### Storage Cabinets

The double doors permit full access to all parts of cabinet. Shelf reinforcements available for heavy duty storage.

No. ....	*1000	†1001
Each. ....	\$46.75	36.50
Weight. .... pounds	200	190
No. 1050, Extra Shelf. .... each	\$2.15	
No. 1070, Shelf Reinforcement. .... each	.98	

### Combination Cabinets

Combines office supplies or package storage and wardrobe facilities in one cabinet. One full width shelf at top for hats. Balance of cabinet is divided for full length clothing storage and material storage.

No. ....	*1010	†1011
Each. ....	\$48.95	40.00
Weight. .... pounds	196	186
No. 1052, Extra Half Shelf. .... each	\$1.60	

### Wardrobe Cabinets

Full width shelf at top for hats and packages. Coat rod below shelf holds 8 to 15 heavy coats on hangers.

Interior completely finished, no sharp edges to mar appearance of cabinet or damage clothing.

No. ....	*1005	†1006
Each. ....	\$43.70	34.20
Weight. .... pounds	173	163
No. 1051, Extra Wardrobe Shelf with Coat Rod Attached. .... each	\$3.25	
*Shipped set-up.		
†Shipped knocked down.		

## Lyon Steel Lockers

Single Tier

Double Tier

Used in factories, offices, shops, printing plants, and hospitals. Has positive latch, full length pre-locking lock bar. Rigid frame, vertical members extend to floor to form legs. Vertical and horizontal members rabbetted and welded. Bulb edge adds strength and beauty. No bolt heads on locker fronts. Trouble-free hinges, projection welded to frame. Butt of hinge is recessed in door frame. Pin cannot be forced out. Door may be removed and replaced and still retain perfect alignment. Recessed handle, satin chrome finish. Number plate fits in handle and cannot be removed. No protruding parts to snag clothing. Used with padlock or built-in lock. Lockers 12 inches wide have one double prong and three single prong coat hooks. Lockers over 12 inches wide have one double and four single hooks. Number plate extra. Green baked-on enamel finish. Also available in brown finish.

### Single Tier

Full length clothing storage. Shelf 9 inches from top for hats, lunches, etc. Single tier doors have 3-point locking device (top, bottom and center).

Sizes shown are per locker opening, add 6 inches to height for legs.

### No. 5840 Lyon Locker Racks

Open coat rack having 10 compartments with perforated doors above rack. Locking door secures coat by means of chain attachment. Built in lock, 2 keys. Width, 50 inches. Height, 76 inches. Depth, 18 inches. Green baked-on enamel finish, tan doors.

No. 5840. ....	each	\$50.00
----------------	------	---------

## Orangeburg Fibre Conduit

Taper Sleeve Joint

Orangeburg Conduit has been used as a raceway for underground communications and power circuits since 1893.

Manufactured by the Fibre Conduit Company, Orangeburg, New York, where continuing research and development insures a high standard of both workmanship and product improvement.

### Permanence and Low Cost

Orangeburg Conduit has proven its ability to give maximum, permanent, low maintenance service under conditions that expose ducts to attack from ground waters and chemical wastes—both acid and alkaline.

Installations running back over forty years are still providing clear, usable raceways.

Low in first cost, light in weight yet amply strong to resist breakage, it can be transported to the job in large truckloads.

The material is easy to cut or work. Angle couplings, bends, and other fittings make installation simple and economical. Long lengths and readily assembled Taper Sleeve Joints make for labor saving and low installed cost.

### Protection From Cable Sheath Abrasion

Scoring or abrasion of the cable sheath weakens its resistance to corrosive elements and shortens its life. Because of the smooth bore and relatively soft nature of their materials, Orangeburg ducts do not score or abrade the lead-sheath cable.

### Protection From Pulling Tension

Pulling tension on cable tends to set up strains in the sheath. The coefficient of friction in Orangeburg Conduit is lower than in other types of duct material. Published data by one large utility reveal the following coefficient of friction for a large actual installation recently made in which oil-filled cable was used:

Size of Cable	Size of Cut	Coefficient
300,000C.M.	2 1/4-In. O.D.	3 1/2 Inches .25-.30
650,000C.M.	2 1/2-In. O.D.	4 Inches .25-.30

### General Properties

Composed of 25 per cent fibre and 75 per cent coal tar pitch with wall sections homogeneous and impregnation uniform throughout.

### Specifications

Federal Specification: WC-581,  
A.T. & T. (Bell Laboratories): AT-7047,  
U.S. Navy: 9YE,  
I.M.S.A.: 104-1942,  
Civil Aeronautics Authority: CAA-606,  
Association of American Railroads: XVIII-A-21 1929,  
And many Public Utilities specifications.

## Orangeburg Standard Conduit (Type I) For Installation with Concrete Encasement

For main distribution, high tension, and downtown locations.

Orangeburg Standard (Encased in Concrete), is the most economical where duct banks of four or more ducts are involved.

Interchangeable taperjoint couplings are furnished with each length of conduit without extra charge.

A mating 2-degree factory machined taper is provided on each length of conduit and assures a watertight joint.

## Orangeburg NOCRETE Conduit (Type II)

### For Installation Without Concrete Encasement

Conduit for underground without concrete encasement must have three prime characteristics: (1) mechanical strength; (2) ability to endure permanently; (3) offer lasting cable protection.

For house connections, laterals and extensions; airport, street and parkway lighting, fire alarm and signal systems; industrial and institutional grounds.

### How to Lay Orangeburg NOCRETE Conduit

Trench and backfill. The trench bottom should be graded true and free from stones or soft spots. Backfill should be free of stones, and should be firmly tamped around the side of the conduit to develop maximum supporting strength. Tamping on top of the conduit is not recommended.

1. Best results are obtained if a cradle is made for the conduit in the undisturbed subgrade. In rocky soil, where this is not possible, a bedding of selected backfill should be put down and tamped before laying conduit.

2. Sidefill up to near the top of the conduit should be firmly tamped.

3. Selected backfill (not tamped) at least 6 inches over the top of the conduit is recommended.

4. Final backfill may now be placed. Tamping may now be employed to finish grade.

### Fittings for *Standard* and *NOCRETE* Conduit

#### 5° Angle Couplings

Available to permit the laying of offsets, long radius bends, etc., to get around obstructions and other services which may be encountered.

The Taper Joint is provided, and a mark on the coupling shows the direction in which the angle will point.

## Reducers

Reducers from one size conduit to another are available in all combinations from 1 to 6 inches inclusive. The standard reducer is Taper Sleeve Joint at both ends. Sizes

and types of conduit, joints, etc. to be connected must be specified in detail.

## Adapters

Adapters from metal pipe to fibre conduit are available in all combinations from 1 to 6 inches inclusive.

The standard adapter is Taper Sleeve Joint at the fibre end threaded for metal pipe size specified, at the other end. Can be supplied straight bore for threadless metal pipe. Sizes and types of connections desired must be specified.

## Fibre Plugs

## Fibre Bushings

Solid

Split

For temporarily closing ends of ducts during concreting, etc.

Available for 2 to 6-inch size conduits inclusive.

Available for all conduit sizes 2 to 5 inches inclusive.

## Fibre Caps

For sealing spare ducts or exposed conduit ends, etc. Taper Sleeve Joint is standard; socket joint or sleeve fit if specified.

Made for conduit sizes 1 to 6 inches inclusive.

## Orangeburg Fibre Conduit Accessories

## Spacers (Bridges or Separators)

For built-up fibre conduit installations, grooved spacers are available for one, two, three or four conduit wide assemblies. These spacers are cast for conduit sizes from 2 to 4½ inches inclusive.

As the general practice is to allow a separation of 1 inch between conduits, this is the standard separation provided. However, for special applications, spacers can be supplied for 1½, 2 or 3-inch separation between ducts.

Orangeburg Conduit Spacers are handled as a service item. Although built for minimum weight with adequate strength, transportation cost may make it more economical for the large user at distant points to make his own spacers. Complete information as to mix employed will be furnished upon request.

## Dimension, Inches, of Conduit Spacers

Conduit Inches	R	E	1-INCH SEPARATION			1½-INCH SEPARATION			2-INCH SEPARATION			3-INCH SEPARATION

Dimensions I, II, III and IV indicate overall length of spacer for 1, 2, 3 or 4 conduits laterally spaced.

## Orangeburg Field Tooling Lathe

For 1 to 6-Inch *Standard* and *NOCRETE* Conduit

Orangeburg field tooling lathes are made of hardened steel alloy with needle bearings in the cutting handle.

With reasonable care, they maintain accuracy for many years.

No. 0902 is designed for 1-inch conduit only.

No. 0904 is designed for 2-inch conduit only.

No. 0905 is adjustable for 3 to 6-inch conduit only.

## Parts List

No.	Description	Quantity
380	Cutter Holder (Taper Joint).....	1

*429	Socket Joint Cutter, 3 to 4-Inch <i>NOCRETE</i>	

\*Furnished only when specified.

## Shipping Weights and Data

**Economical Transportation.** Orangeburg Conduit is transported by rail or truck most economically because it combines light weight with ample strength to resist breakage. The largest truck bodies can be loaded to maximum cubic carrying capacity, reducing trips and hourly costs to an almost negligible cost per foot.

Orangeburg price schedules are based on total weight of material involved, including all bends, elbows and items classified as fittings *Standard* and *NOCRETE*; excluding items classified as accessories (spacers, etc.)

**Shorts.** The right is reserved to include 15 per cent of lengths shorter than standard. All shorts included are packed separately in any shipment to facilitate identification and easy count. Shorts are cut to even lengths six or twelve inches less than standard.

**Class A Orders:** 30,000 pounds (minimum car) or over.

**Class B Orders:** 10,000 to 29,999 pounds.

**Class C Orders:** 9,999 pounds or less.

**Crating.** There is an extra charge for crating Class A and B orders, if crating is desired and specified. Class C orders are usually packaged for less than carload handling.

Weights of bends and other fiber items are included in figuring minimum weights; consequently such items on an order will decrease footage in the conduit weight tables.

The weights listed below are used for pricing computations only (approximate shipping weights).

Orangeburg *Standard* Conduit

Conduit Size.....inches	1	2	3	4	4½	5	6
Weight per 100 Feet.....pounds	50	115	140	200	240	300	425

### Natco Standard Single Duct Conduit

Adapted for high tension power lines, single cable terminals or for low tension laterals, as in telephone or signal lines.

In building up duct banks, this conduit provides two heavy insulating walls between adjacent cables, and permits breaking or staggering of all joints throughout the duct bank.

Permits the splaying or separation of individual duct lines in approaches to manholes.

Conduit is scarified lengthwise on the four outer sides, to provide anchorage for bedding mortar.

The inner edges of the duct entrances are properly bevelled and smoothed to eliminate projections and to make safe the pulling of cables.

Certain square single duct shapes are provided with through dowel holes in the corners, permitting the use of steel dowel pins for assembling, centering and aligning such duct lines.

Nom- inal Bore In.	No. Duct Holes	Std. Lgth. In.	Duct Ft. per Pc.	Actual Size Duct Hole In.	Approx. Out- side Dimen. In.	Short Lgths. In.	Min. Car- load Duct Ft.

### Natco Single Duct Bends

#### Standard Shapes

Bore.....	3 1/4, 3 1/2 or 4 1/4	Round or Square
Angle.....	45°	90°
Radius.....inches	12, 18, 24 or 36	12, 18, 24

#### Arc or Length

Bore.....inches	3 1/4, 3 1/2 or 4 1/4 Rd.	3 1/4, 3 1/2 or 4 1/4 Sq.
Length.....inches	18	18
Radius.....inches	36, 60, 72 or 96	36, 60, 72 or 96

Bends also supplied that are scored for splitting apart.

### Natco Socket Joint Single Duct Conduit

Natco Single Duct Conduit is also manufactured in a new socket joint type, which is supplied in 3 1/2, 4 and 4 1/2-inch round bore and in either 18 or 24-inch standard lengths. This new type of duct is self-centering, provides positive alignment, lays up fast and can be installed by ordinary labor. If desired, the joints may be readily troweled or sealed with cement mortar. This new type of conduit is especially adapted for single duct lateral lines, also equally suitable for duct bank construction where this type of joint is preferred.

Nominal Bore.....inches	3 1/2 Rd.	4 Rd.	4 1/2 Rd.
Length.....inches	18 and 24	24	24
Actual Size of Duct			
Holes.....inches	3 5/8	4 1/8	4 5/8

Also furnished in bends and mitred sections.

### Natco Standard Multiple Duct Conduit

Particularly adapted for telephone, telegraph, railway signal, fire alarm and low tension light and power service. The large units are economical and quick to install, due to their longer lengths and multiplicity of duct holes.

At the extreme ends of each piece of conduit, a smooth surface is left to permit wrapping each joint with tape or fabric to exclude joint mortar from the ducts.

Supplied in either 3 1/4, 3 1/2 or 4 1/4-inch square bore shapes and in 2, 3, 4, 6, 8 and 9-way multiple shapes.

The 3 1/4 inch is the standard bore, while 4 1/4 inch is the over-size bore, for most telephone service and for certain low tension power and lighting systems, while the 3 1/2 inch bore is frequently specified for certain municipal installation.

Nom- inal Bore In.	No. Duct Holes	Std. Lgth. In.	Duct Ft. per Pc.	Actual Size Duct Hole In.	Approx. Out- side Dimen. In.	Made in Short Lgths. In.	Min. Car load Duct Ft.

### Natco Split Conduit

Natco Conduit in both single and multiple duct shapes and in all standard bores is supplied, scored or knifed, for splitting apart on the job, for repairing or replacing duct lines, without the necessity of removing cables.

These split sections may be also used to enclose cable joints or splices in place of building manholes.

Bore Inches	No. of Duct Holes	Standard Length Inches	Short Lengths Inches
3 1/4, 3 1/2 or 4 1/4 Rd.	Sgl. Duct	18	6, 9, 12
3 1/4, 3 1/2 or 4 1/4 Sq.	Sgl. Duct	18	6, 9, 12

3 1/2 Sq.	2 or 3-Way	24	6, 9, 12
3 1/2 Sq.	4 or 6-Way	18 and 36	6, 9, 12
4 1/4 Sq.	2 or 3-Way	18	6
4 1/4 Sq.	4 or 6-Way	18	6
4 1/4 Sq.	9-Way	18	6

**Natco Mitred Conduit**

For Curve Construction

Natco Conduit, both single and multiple duct, in all standard bores, is supplied in mitred shapes, for building either simple or intricate curves in lines of clay conduit, for transposing narrow duct banks into wide ones or vice versa, or for playing duct lines to enter manholes or service points.

Natco Mitred Conduit is made in one standard cut—3 degree and 10-foot radius. The radius of curves built of these sections, is varied simply by interposing straight short pieces between the mitred sections, and the arc of such curves is governed simply by the total number of pieces used.

True and easy curves from 10 to 30 foot radius, and ranging from 3 to 90 degrees, can thus be built.

In the 2, 3 and 6-way multiple conduit, the mitred sections are supplied in either a flat or edge position.

Mitred conduit also supplied scored for splitting apart.

Approximate length, 6x6 $\frac{5}{8}$  inches. Number of pieces in 90° curve, 30.

Bore Inches	No. of Duct Holes	Position
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ , or 4 $\frac{1}{4}$ Round	Single Duct	.....
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ , or 4 $\frac{1}{4}$ Square	Single Duct	.....
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ , or 4 $\frac{1}{4}$ Square	2, 3, or 6-Way	Flat or Edge
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ , or 4 $\frac{1}{4}$ Square	4-Way	.....
3 $\frac{1}{4}$ Square	8-Way	Flat or Edge
3 $\frac{1}{4}$ or 4 $\frac{1}{4}$ Square	9-Way	.....

**Natco Branch Conduit**

For Dividing Multiple Duct Main Lines

Natco Multiple Duct Conduit is supplied in branch shapes in all standard bores.

Natco Branch Conduit is a new shape, one end of which is the same shape and size as standard conduit, while at the opposite end, certain ducts are more widely separated by means of double webs, so as to permit alignment with abutting branch lines.

Branch conduit permits the division of multiple duct main lines into two or more branch lines, each having a smaller number of ducts than the main line. Such a division is highly advantageous in playing main duct lines into central office buildings, manholes or cable vaults, or for turning laterals or service connections. It frequently saves the necessity of manholes.

Also supplied scored for splitting apart.

Length, 24 inches.

Bore Inches	No. of Duct Holes	Type	For Branching Into
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	2-Way	1-1	2 Single Duct
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	3-Way	1-2	1 Single and 1 Two-Way
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	3-Way	1-1-1	3 Single Duct
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	4-Way	2-2	2 Two-Way
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	6-Way	2-4	1 Two-Way and 1 Four-Way
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	6-Way	2-2-2	3 Two-Way
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	6-Way	3-3	2 Three-Way
3 $\frac{1}{4}$ Sq.	8-Way	4-4	2 Four-Way
3 $\frac{1}{4}$ Sq.	8-Way	2-6	1 Two-Way and 1 Six-Way
3 $\frac{1}{4}$ , or 4 $\frac{1}{4}$	9-Way	3-6	1 Three-Way and 1 Six-Way

**Natco Transposition Conduit**

For Transposing or Twisting 2, 3 and 6-Way Conduit Lines

Natco Multiple Duct Conduit is also supplied in transposition shapes in 2, 3, 6 and 8-way multiples, with right or left-hand twist. The degree or angle of twist is 22 $\frac{1}{2}$ ° for 3 $\frac{1}{4}$ -inch bore shapes, 18° for 3 $\frac{1}{2}$ -inch bore shapes and 15° for 4 $\frac{1}{4}$ -inch bore shapes, and the standard length is 24 inches.

The number of pieces required to effect a quarter turn of 90° from a flat to an edge position, or vice versa, is four pieces in the 3 $\frac{1}{4}$ -inch bore, five pieces in 3 $\frac{1}{2}$ -inch bore or six pieces in the 4 $\frac{1}{4}$ -inch bore sizes.

These transposition shapes are of considerable advantage in changing the position of height of conduit lines, in order to avoid certain street obstructions, or to cross viaducts or bridges, or to change the position of cables on their approach to manholes or cable vaults, all of which frequently eliminates the need of manholes.

Direction of twist, right or left hand.

Bore.....inches	3 $\frac{1}{4}$	3 $\frac{1}{2}$	4 $\frac{1}{4}$
Twist.....	22 $\frac{1}{2}$ °	18°	15°
No. of Pieces in $\frac{1}{4}$ Turn.....	4	5	6

**Natco Pipe Connectors**Single Duct  
Connector2-Way  
Connector3-Way  
Connector

Rear View of Connector Ready to Receive Conduit

For the purpose of connecting clay conduit lines to iron pipe lines as in pole risers or to enter buildings, Natco Pipe Connectors are available in the sizes shown below.

These connectors are made of cast iron, one end is shaped to receive the end of the clay conduit line, while the opposite end of the connector is reamed to receive the iron pipe lines.

**Single Duct Connector**

For 3 $\frac{1}{4}$ -inch bore conduit and 3-inch pipe or 4 $\frac{1}{4}$ -inch bore conduit and 4-inch pipe.

**2-Way Connector**

For 3 $\frac{1}{4}$ -inch bore conduit and 3-inch pipe or 4 $\frac{1}{4}$ -inch bore conduit and 4-inch pipe.

**3-Way Connector**

For 3 $\frac{1}{4}$ -inch bore conduit and 3-inch pipe or 4 $\frac{1}{4}$ -inch bore conduit and 4-inch pipe.

## No. 106 Natco Conduit

Illustrating the conversion of a 4-way multiple duct line into two 2-way multiple duct lines in an edge position, one of which is flexed or curved to one side in the direction of a pole and terminated in two riser iron pipe lines, ascending the pole, while the other 2-way line is transposed or twisted 90° from an edge to a flat position in a distance of 8 feet and then continued straight on in the form of standard 2-way multiple duct conduit—in a flat position.

## Specifications

B—One-piece 4-way type 2-2 branch conduit, 2 feet long (for dividing the 4-way line into two 2-way lines).

E—Six pieces 2-way mitred conduit—edge position—3° 10-inch radius—6¼ inches long, (for flexing or curving one of the 2-way lines to one side in the direction of the pole. The angle of flexure shown is 18° but any angle of flexure divisible by 3, may be attained by varying the number of mitred pieces).

H—One-piece 2-way standard conduit, 2 feet long (laid in edge position—to extend the flexed 2-way line on towards pole).

R—One cast iron 2-way connector for 3-inch wrought iron pipe.

P—Four pieces 2-way left-hand transposition conduit, 22½°, 2 feet long (for transposing the other 2-way line 90° from an edge to a flat position).

## Dowel Pins

Pressed steel pins, 5/8x3 inches, with an integral central flange or collar, are generally used for joining or aligning individual sections of multiple duct, also certain sizes of square bore single duct conduit together.

Two pins are used at each joint or for each piece of conduit.

## Joint Tape

An especially prepared tape is frequently used for wrapping the joints of multiple duct conduit prior to the application of the joint mortar, also occasionally used for wrapping joints of single duct conduit in trench, subway or masonry structures, prior to the pouring of the concrete encasement.

This tape has an adhesive waterproof coating on one side, and is supplied in 4 and 6-inch widths, and put up in rolls of 25 linear yards.

Tape adheres closely and firmly to the glazed surface of the conduit and aids in sealing the joints.

In ordering, specify total number of linear yards required.

## Minerallac Insulating Compound

For Use in Cable Joints, Potheads and Terminal Bells

## High Voltage Compound

**No. 1.** A compound having the consistency of molasses. Not affected by moisture. Especially effective in drying out tape and cloth, and between layers of such materials when wound on high-voltage electrical apparatus.

**No. 2A.** Cable joint or pothead compound. Melting point, 82°C. One of the most important characteristics of this compound is its ability to adhere to metal or porcelain. Suitable for use in warm climates.

**No. 64.** A compound suitable for use in mild climates where there is no great variation in temperature. A hard compound with a melting point of approximately 93°C.

**No. 78.** Cable joint or pothead compound. Dense and adhesive with little shrinkage. Recommended as an all-purpose insulating material. Low moisture absorption; pliable. Recommended for voltages 600 and up. Melting point, 90°C. Dielectric strength 940 volts per mil at 30°C.

**No. 80.** Pothead compound. A hard compound for use on 600 volts and over. Melting point, 130°C. Tests 990 volts per mil at 30°C.

**No. 104.** A semi-solid compound for use in cable joints on high voltage lines over 600. Melting point, 50°C. Dielectric strength averages 800 volts per mil at 30°C.

**No. 104A.** A semi-solid compound with the same general characteristics as No. 104, except that it has a lower melting point (35°C). Average viscosity, 800 seconds at 100°C. For use on high voltage potheads and cable joints where a low melting point compound is required.

## G &amp; W Telephone Cable Splicing Kits

For 2-way straight joints for all sizes and numbers of conductors, paper-wrapped, wood pulp and silk insulated, lead covered, plain and armored cables.

Kit contains: paraffin, for boiling out the core; Stearine, flux for wiping joints; dry cotton tape, for protecting the individual conductors at the ends of the lead sheaths; muslin tape, for wrapping the spliced conductors; paper pasters, for limiting the wipes; lead sleeve, 1/8-inch thick, for housing the joint; and wiping solder, for wiping lead sleeve to cable sheaths.

## Ozite B Filling Compounds

Ozite B is a black asphaltic compound recommended for filling joints, terminals and junction boxes operated at normal temperatures.

This compound is manufactured under an improved process which results in a product with a low carbon content. Formulated by expert cable engineers with many years of experience, this compound combines all of the desirable characteristics that a jointing or filling compound should have.

Prices and complete information upon application.

## No. 2769 McGill Crescent Chatterton Compound

Domestic Brand

A para rubber compound for insulating 75% pure rubber. Gives complete assurance against danger of open contacts and terminals; can also be used for waterproofing. Used on all high grade electrical work. Formed in 1/4-pound sticks, 1 inch in diameter and 8 inches long.

Put up 10 sticks in a package; weight, 2 1/2 pounds.

No. 2769.....per pound \$2.00

## No. 150 Minerallac Cable Pulling Compound

Minerallac Cable Pulling Compound is applied to the cable at the entrance of the cable feeder with a stiff brush. The properties of this compound cause it to cling to and lubricate the full length of the cable and conduit. The compound will follow through curves and bends in the conduit, eliminating damage to the cable sheath. No. 150 Cable Pulling Compound has the following features:

Chemically inert—no deterioration to either cable or conduit, including fiber conduit.

Economical—a comparatively small quantity is sufficient to pull a cable into the conduit: 5 to 7 pounds to pull a 2.83-inch diameter cable into approximately 400 feet of 3 1/2-inch tile conduit.

Not affected by temperature—cables may be pulled at temperatures as low as 10° above zero (F.).

Size Can.....pounds 12 25 60 \*600  
No. 150.....per pound \$1.14 .13 .12 .10

\*Steel drum weighing approximately 600 pounds.

## No. 100 Minerallac Pull-In Compound

Used to lubricate rubber covered wire and cable that is to be pulled through conduit.

Reduces pulling tension and injury to wires and cables.

Furnished in 2-gallon cans.

No. 100.....per can \$3.25

## O.Z. Insulating Compound

For 750 to 2500 volt terminators

Approximate shipping weight, 10 pounds per gallon.

## Cope Safety Compound Kettles

Capacity, 3 Gallons

The double flue extending through the kettle bottom and up and out to the sides, conducts the heat to every part of the compound. This insures a uniform melting, thereby preventing all danger of explosion.

The short lip spout eliminates clogging and allows free pouring. The wide kettle opening provides ease in filling and also in dipping tubes and socks.

Made of heavy steel, welded throughout. Has an extra heavy bottom which is inset 1 inch from the base. Tight fitting lid prevents loss of compound. Diameter, 10 inches; height, 12 inches.

Each.....\$16.90

## Ruberoid Rapid Asphalt Paint

(Formerly P & B Rapid Asphalt Paint)

Dries quickly to a hard, glossy coating, exceedingly tough and durable and with high insulating properties. Adapted for cables, switchboards, battery boxes, shelving, conduit joints and all insulating requirements.

Made in medium brushing consistency.

## Reliable Bronze Cable Grips

Used for permanent fastenings and supports for cables.  
Bronze cable grips can be furnished in all standard designs  
and sizes specified for steel.

To obtain prices, add 20 per cent to steel prices for sizes  
1/2-inch diameter to 1 7/8-inch diameter. For sizes 2 inches in  
diameter and larger, add 30 per cent. Example: No. 1023,  
steel price, \$4.60; bronze price, \$5.52.

## Perfection Flat Tape Conduit Rods

In general use by power, electric light, telephone, city fire alarm systems, street railway companies, and contractors in general.

This rod will handle laterals easily. One man can rod 300 feet, using the patent grip handle.

The factor of broken rods has been eliminated. The average time required to rod 500 feet with two men is about twenty minutes, at an average cost of about  $\frac{1}{4}$  cent a running duct foot.

**$\frac{1}{4} \times \frac{1}{16}$ -Inch Size.** Will take right angles in  $1\frac{1}{2}$ -inch conduits. With flexible cleanout leader, ball roller, and adjustable hand grip. On safety holding frame.

In 100 to 500-foot lengths.  
Per 100 Feet..... \$6.00

**$\frac{1}{2} \times \frac{1}{16}$ -Inch Size.** For 2 to 4-inch ducts. Flexible; will take laterals; will rod over another cable in ducts. Has ball roller and sliding rodding hand grip. On safety holding frame.

In 100 to 400-foot lengths.  
Per 100 Feet..... \$11.25

**$\frac{1}{2} \times \frac{1}{8}$ -Inch Size.** For 2 to 4-inch ducts. Rigid; for long runs; flexible enough to take laterals. Has ball roller which indicates clearance in duct where one or more cables are in and more cable is desired. Furnished with adjustable hand grip. On safety holding frame.

In 100 to 400-foot lengths.  
Per 100 Feet..... \$15.75

**$\frac{3}{4} \times \frac{1}{16}$ -Inch Size.** For 2 to 4-inch ducts. This size is more flexible than the  $\frac{1}{2} \times \frac{1}{8}$ -inch size. Has ball roller and adjustable hand grip. On safety holding frame.

In 100 to 400-foot lengths.  
Per 100 Feet..... \$12.75

**$\frac{3}{4} \times \frac{1}{8}$ -Inch Standard Size.** A standard duct size for long runs. For 3 to 4-inch ducts. This rod replaces the old type wooden rod.

Tensile strength, 225,000 pounds per square inch. Breaking strength, 21,000 pounds. On galvanized safety holding frame.

In 100 to 500-foot lengths.  
Net Weight per 100 feet, 33 pounds.

Per 100 Feet..... \$22.00

**$1 \times \frac{1}{8}$ -Inch Special Size.** A rigid, yet sufficiently flexible rod to take laterals. On safety holding frame.

In 100 to 500-foot lengths.  
Per 100 Feet..... \$28.00

## Parts

\*†Large Ball Feeding Rollers.....each \$2.00  
\*†Small Ball Feeding Rollers.....each 2.00  
Revolving Spear Heads, Large.....each 5.00  
Revolving Spear Heads, Small.....each 4.00

\*Take laterals easily and slide rod through ducts rapidly.

†For 2 to 4-inch ducts.

‡For small ducts or where rodding is done over another cable in ducts.

## Cope Underground Conduit Tools

## Jar Hammers

Used in connection with all types of cutters for removal of stubborn obstructions such as heavy silt, cement, etc.

Made of 2-inch diameter steel tubing with heavy piston and hammer working inside the cylinder.

Size Stroke.....inches 8  
Each..... \$22.80

## Laying Mandrels

Body is of well seasoned maple. Rear end is equipped with a leather wiping washer and the forward end with a counter-sunk steel hoop and tool steel cutting edge.

Length, 36 inches. In diameters to fit any size conduit.  
Size.....inches 3  $3\frac{1}{2}$  4 6  
Each..... \$15.00 17.20 19.00 27.60

## Test Mandrels

## Round

## Square

Made to exact size for testing conduits after laying. Has tool steel cutting ends to remove concrete or other light obstructions. Length, 12 inches.

Size.....inches 3  $3\frac{1}{2}$  4  
Round.....each \$9.50 10.50 11.50  
Square.....each 11.50 12.50 13.50

## Flexible Mandrels

For testing conduits having bends through which a rigid mandrel would not pass. Constructed of tool steel discs, mounted on a flexible wire rope, securely babbitted to the heavy socket eyes. Will withstand a pull of over 5000 pounds.

Size.....inches 3  $3\frac{1}{2}$  4  
Each..... \$30.50 34.30 38.30

## Pickups

Used to recover rods or tools lost in the conduit. Can also be used on long pulls where it is desirable to work from both ends.

Pickup has two steel shutters with beveled notches and spring action, so that it will recover and catch firmly no matter what position it may be in within the conduit.

Each..... \$28.80

## Rod Grapples

Used where long lines of conduit are to be rodded. Permits rodding from both ends of conduit and provides positive connection where they meet. Several hooks engage opposite ends  
Each..... \$14.50

## Sand Scoops

For removing loose sand and silt which may enter the conduit and prove harmful to lead sheathed cables.

Made of light weight tubing.  
Size.....inches 3x15  $3\frac{1}{2}$ x18 4x20  
Each..... \$11.40 13.30 15.20

Cope Wire Brush Cleaners

Single End

Double End

Brush has a flat tempered steel bristle which will remove all sand and other light obstructions.

Made for all size conduits with either a rod connection or socket eyes on both ends.

Diameter.....inches	3	3½	4	5
Single End.....each	\$4.80	\$5.30	\$5.80	\$6.60
Double End.....each	5.30	5.80	6.50	7.30

Diamond Empire Conduit and Sewer Rods

Straight sticks are furnished of uniform diameter 1 inch throughout.

Couplings are malleable iron. Ends are interchangeable. Axles are machined from brass rod, solid head and shouldered on coupling. Wheels are machined at hub to fit axle and shaped to conform to curve of duct. The rod is made of best selected straight grain well seasoned hickory, tapering to 1 inch at opening.

Length.....feet	3	4
With Wheels.....each	\$1.80	\$2.00
Without Wheels.....each	1.55	1.75

Diamond Screw Duct Rods

Couplings are made of government bronze. The hickory used in the shaft is selected stock, well seasoned. Threads are accurately cut to ¾-inch U.S.S., 10 threads per inch. Rivets are countersunk. Hickory shafts are 7/8 inch in diameter.

No. 855, 3-Foot Length.....each	\$1.65
No. 856, 4-Foot Length.....each	1.80

Cope Quick Coupling Conduit Rods

Made from annealed malleable iron. Power-driven and securely riveted on the stick.

Stick is made of hickory.

Available in 2, 3, and 4-foot lengths with a straight shaft of 1-inch diameter. The 3 and 4-foot lengths are also made with a swell center stick, having a diameter of 1¼ inches in the center, tapering to 1-inch diameter.

Description	Each	Wt. Lb. per 100
2-Foot Rod, Straight Stick.....	105	
3-Foot Rod, Straight Stick.....	205	
4-Foot Rod, Straight Stick.....	245	
3-Foot Rod, Swell Center Stick.....	230	
4-Foot Rod, Swell Center Stick.....	275	

Cope Rod Adapters

Designed to make the Quick coupling rod available for use with any conduit tool equipped for screw coupling or vice versa.

Weight, 2 pounds.

Each..... \$3.00

Cope Screw Coupling Conduit Rods

Furnished in 3 or 4-foot lengths.

Coupling is made of cast bronze, octagon-shaped, with a ¾-inch U.S. standard thread.

Stick is made of hickory, and is available with either a 7/8 or 1-inch diameter. Also furnished with swell center, 1-inch diameter stick.

Diam. In.	Description	Each	Wt. Lb. per 100
7/8	3-Foot Rod, Straight Stick.....	155	
7/8	4-Foot Rod, Straight Stick.....	185	
1	3-Foot Rod, Straight Stick.....	195	
1	4-Foot Rod, Straight Stick.....	235	
1	3-Foot Rod, Swell Center Stick.....	220	
1	4-Foot Rod, Swell Center Stick.....	265	

Cope Iron Cable Dressers

Used to produce a smooth finish on splices or sleeves when placed over any unevenness in the splice. Made of 2x¼-inch carbon steel. Handle is movable.

Available in two sizes: No. 1 for cable up to 3½ inches in diameter; No. 2 for 4½-inch cable. Weight, 1 pound.

No. ....	1	2
Each.....	\$3.25	3.75

Cope Criss Cross Cleaners

Cleans conduit. Has a multitude of edges at right angles to the surface of the conduit to assure a thorough cleaning.

Flexible spring formation makes it self-conforming.

Adjusting nuts on each end permit nominal adjustments in the outside diameter. Furnished in any diameter. Weight, 5 pounds.

Size.....inches	3	3½	4
Each.....	\$11.50	12.50	13.50

Cope Washer Duct Cleaners

For a final wiping and cleaning of the conduit.

Consists of a flexible wire rope with tube spacers separating leather washers of graduated sizes, faced with steel. Has heavy socket eyes fastened on both ends. Size, 3 inches.

Furnished in any diameter. Weight, 8 pounds.

Each..... \$22.70

Cope Sag Gages

Used when stringing open wire.

A sag gage is hung on the cross arm at each end of the span and the target is set at a pre-determined height on the calibrated slot in the gage.

The sag in the line is conditional upon the size of wire and length of span.

The target folds when not in use, and when open presents a face 12x2 inches, painted bright yellow.

Calibrations, 4 to 18 inches.

Weight, 1½ pounds.

Each..... \$3.80

## Cope Rod Puller

Used for rodding long conduit lines where the weight of the rod becomes a controlling factor.

Made of malleable iron.

Can be placed on the rod at any point and can be used for either pulling or pushing by reversing the tool.

It exerts a firm pressure on the stick without cutting or otherwise injuring the rod.

Weight, 2½ pounds.

Each..... \$4.70

## Cope Push-Pull Jacks

Used for additional slack in a manhole or to take up slack in overhead cable installation. Converted into a pusher by reversing the drawbar.

Made of high carbon, heat treated steel.

Leverage, 30 to 1. Safe capacity, 4000 pounds. Double action makes a secure lock every half inch. Furnished with drop-forged clevis and bronze double shackle swivel.

Weight, 12 pounds.

Each..... \$40.00

## Type C Cope Cable Benders

Designed to form and bend large cable in underground construction.

May also be used for straightening cable.

Adjustable yoke provides seven positions of handle and permits work in close quarters.

Simply pulling back on sleeve releases ratchet and permits handle to be moved in any position.

Yoke and arm are alloy steel castings with extension handle of steel tubing.

Wide bearing surface and rounded edges of shoes prevent injury or deformation of cable sheath.

Overall dimension, 36 inches.

Weight, 14 pounds.

Type C.....each \$28.40

## Cope Cable Puller

Used with the reel turner and reel brake in pulling out 2½ to 3-inch cable.

The grips or clamps are alloy steel castings designed to exert a positive grip on the cable when in the pulling position. Slackening of the winch or hoist permits it to be released and slid back on the cable for another pull. The grips will not cut or deform the cable. Weight, 30 pounds.

Each..... \$50.00

## Cope Cable Pulling Equipment

### Safety Reel Brake

Used in the removal of cable to eliminate back-lash.

One man, while handling the turning bar can manage the re-reeling operation.

Adjustable to different sizes of reels. Rings are provided on the base plate for tying to the jack.

Weight, 90 pounds.

Each..... \$72.50

### Reel Turner

Used to re-reel cable.

One man can safely and easily handle the turning of the reel, taking up the cable as it is pulled from the conduit.

Adjustable to any standard size reel. Weight, 23 pounds.

Each..... \$50.00

## Cope Aerial Tents

For protection of aerial cable during installation or repair.

Made of 10-ounce U. S. Army duck double hemmed at each seam.

Framework is made of steel and pipe sections which fold into a compact bundle.

Open dimensions, 52x48 inches.

Length of 104 inches gives plenty of headroom and extends well below the working platform.

Tent is lashed to working platform with ropes provided on each corner of frame. A locking device securely fastens tent frame to the messenger strand.

Weight, with frame, 40 lb.

Each..... \$70.00

## Cope Cable Pulling Rigging

Type B

Designed to provide a direct pull through the conduit. When in the manhole, the lower sheave is located opposite the conduit with the upper sheave above the street line to lead to the winch.

Constructed of 6-inch 8.2-pound channel, welded. The two sheaves with 10-inch minimum diameter have large, well finished grooves to prevent injury to the cable. Each sheave is mounted on a 1-inch steel shaft.

Length.....feet	9	10	12
Type B.....each	\$60.50	64.75	72.00

## B &amp; L Star Brand Pulling-In Frames

No. PU 26

The pulling-in frame is constructed to help install cable in underground ducts.

The sheave support consists of two 13-foot sections of 6-inch steel channels, fastened together at each end by two sections of 4-inch steel channels. Each 13-foot section is provided with 24 holes on 6-inch centers in order to allow the two sheaves to be adjusted to the proper position on the sheave support for any cable installation.

Two aluminum sheaves are used with each sheave support: one large sheave and one small sheave which have diameters of 20 and 5 $\frac{3}{4}$  inches respectively. The diameter and groove of large sheave are of sufficient size to allow a cable to be pulled over it without harming the cable sheath, when this procedure is necessary to obtain sufficient cable in the manhole for splicing. An important feature is that each sheave is provided with Graphite Bronze self-lubricating bushing which makes the use of lubricant unnecessary.

Shipping weight, 260 pounds.

No. PU26, Complete.....

## Cope Ground Tents

Gives full protection to men working in a manhole under adverse weather conditions.

Made of 10-ounce U.S. Army duck.

Framework is made of  $\frac{1}{2}$ -inch heavy pipe, welded, and has hot dipped galvanized finish.

Open dimensions, 82 $\frac{1}{2}$  inches square and 77 inches high. An additional flap,

15 $\frac{1}{2}$  inches wide, extends around the tent on the ground. Legs of tent fold up in two sections inside the framework to form a compact package approximately 38x38x9 inches.

Weight: frame, 45 pounds; cover, 25 pounds.

Frames and Covers, Complete.....each \$72.50

Frames and covers may be purchased individually.

## Cope Aerial Cable Feeders and Straighteners

For pulling in aerial cable.

The wide mouth aluminum bells and flexible steel tubing prevent danger to cable or sheath. Holding clamps which securely grip messenger wire can also be used for dead-ending and splicing work. Interior surfaces are smoothly finished to accommodate up to 3-inch cables.

Complete with 6-Foot Tube, 2 Pairs Malleable Iron Clamps.....each	\$38.25
Extra Lengths of Tubing.....per foot	1.50
Holding and Splicing Clamps.....per pair	9.00

## Cope Pull-In-Guide or Cable Feeders

Used to lead the cable from the street reel into the mouth of the conduit without injury.

Constructed with heavy brass bell, completely finished, securely fixed to a length of heavy steel tubing. The conduit end has a steel sleeve which will accommodate various size brass nozzles to fit the several sizes of conduit.

Guides, Length.....feet	9	12	16	20			
Each.....	\$86.00	95.00	106.25	118.75

## No. 860 Diamond Manhole Cover Hooks

This is a useful tool for the subway construction force. It is designed to easily raise a heavy manhole cover by prying the wedged point end of the hook under the groove provided in the cover for the purpose.

The hook is made of an excellent quality of electric tool steel suitably hardened at and adjacent to the hook to prevent its bending, and at the same time sufficiently tough to prevent breaking off.

No. 860.....each \$1.50

## Cope Pneumatic Fish Lines

For rodding long run round conduit ranging in size from 3 to 5 inches.

## Reel Unit

The reel is equipped with crank and gear for re-reeling. Contains 1000 feet of  $\frac{3}{8}$ -inch stranded steel cable having a tensile strength of 920 pounds. Only one reel unit is required for use in any size conduit.

## Conduit Seal

Faced with rubber which is expanded to grip the interior surface of the conduit to prevent the loss of air and to support the reel during operation. Expansion range, 1 inch. Two sizes: No. 3, 3 to 4-inch; No. 4, 4 to 5-inch conduit.

## Projectile

Consists of a pair of rubber cups fastened together. When compressed air is introduced, the projectile progresses 100 feet per minute with a pressure of less than 10 pounds. Since rubber cups must have a snug fit, each projectile will fit only one size conduit. Furnished with one projectile for any one size ranging from 3 to 5 inches.

Furnished with carrying case.

Weight, 100 pounds.

Complete.....	each	\$205.00
Additional Seals.....	each	72.50
Additional Projectiles.....	each	20.00

Up to 2000 feet of reel cable can be furnished at additional cost.

## No. 220 Simplex Manhole Sheaves

For pulling cable or carrying the winch line at right angles. Used on end of a truck or over edge of manhole in connection with a snatch block in the manhole, eliminating use of manhole skids.

Will handle cable up to 3 inches in diameter, or any size winch line.

Furnished with a  $\frac{1}{4}$ -inch chain, 24 inches long, with special hook for anchoring.

No.....	220
Each.....	\$106.00
Large Sheave Diameter.....	inches $7\frac{3}{4}$
Large Sheave Width.....	inches 3
Small Sheave Diameter.....	inches $4\frac{3}{4}$
Small Sheave Width.....	inches 3
Weight.....	pounds 100

## No. PU 27 B &amp; L Star Brand Cable Sheaves and Shackles

The cable sheave and shackle may be used in place of the pulling-in frame when it is possible or advisable to locate the rear of the truck directly over the manhole. The device is attached to the manhole pulling iron and the winch line goes over a roller or sheave at the rear of the truck then down and under the cable sheave and shackle and thus into the duct. The sheave is made of special aluminum alloy for light weight, 20 inches in diameter, with a groove large enough to take a  $2\frac{5}{8}$ -inch cable. The hook is drop-forged.

Complete, Approximate Weight, 65 Pounds.....	\$180.00
Frame, Complete, less Sheave, Approx. Wt., 37 lb. ea.	35.00
20-Inch Diam. Aluminum Sheave, Approx. Wt., 28 Lb.....	each 145.00

## Cope Manhole Guard Rails

Made of  $\frac{3}{4}$ -inch standard black steel pipe with seamless steel tubing sleeves. Made with a completely welded construction.

Unless otherwise ordered, all rails are painted with two coats of Signal Red Enamel.

## Type 264

This guard closely follows the design of the American Telephone and Telegraph Company's standard. The bow-shaped wing brace holds the rail absolutely rigid against collapse when in place, leaving the open side entirely free for work. The chains allow this rail to be padlocked to pole, etc. Can be supplied with or without "men working" panels.

Open 32x32x42 inches high, folded 32x2x42 inches.

Weight, 49 pounds.

Type 264.....	each \$30.75
---------------	--------------

## Type 110

This is somewhat lighter construction than the Type 264 while still holding to the same material.

It is equipped with flag holder and steel hook for holding it rigid while open.

Open 32x32x42 inches high, closed 32x3x42 inches.

Weight 40 pounds.

Type 110.....	each \$23.75
---------------	--------------

## Peirce Underground Cable Racks

Hot Galvanized

Rack section is made in three lengths which can be combined into almost any desired length. Section is made from  $1\frac{1}{2} \times \frac{3}{4} \times \frac{3}{16}$ -inch open hearth steel channel, amply strong to support the heaviest cable. Should be fastened to manhole wall with  $\frac{1}{2} \times 4$ -inch Peirce Expansion Bolts.

Hook is cut from open hearth steel T section and has a smooth, well rounded top surface  $1\frac{1}{2}$  inches wide which will not injure the sheaths of cable. Steel size,  $1\frac{1}{2} \times 1\frac{1}{2} \times \frac{3}{16}$  inches. Easily attached and with the weight of the cable on it, holds securely to the channel back.

## Hubbard Underground Cable Racks

Hot Galvanized

Furnished to accommodate from one to four hooks. Combinations may be used for a greater number of hooks if desired.

Hook furnished in three lengths made from certified malleable iron, hot galvanized. Hook is placed in position by raising the outer end slightly above horizontal so that the supporting lug will engage the opening in the rack. It is then moved to alignment and allowed to drop into place where it is held against side movement by web braces which engage the back on both sides.

## Peirce V-Type Cable Racks

Hot Galvanized

Insulator No. 2215

No. 2215 Insulator Installed

Hooks are held rigidly in a horizontal position. No. 2291 hook accommodates one insulator, No. 2292 takes two insulators, No. 2293 takes three insulators, and No. 2294 takes four insulators.

The same number of either size insulator listed will fit on any hook. When more than one insulator is used, they are generally spaced an inch or more apart to give mechanical and electrical clearance.

A stop is furnished on each hook to prevent the insulators from sliding off the end.

**No. 2225 Peirce Heavy Cable Racks****Hot Galvanized**

The rack section is  $2\frac{1}{4} \times 2\frac{1}{4} \times \frac{1}{4}$ -inch steel T section and is offset at the lower end for overlapping when combining two racks together. Any desired length of cable rack can be made in this manner.

Rack is provided with  $\frac{1}{16}$ -inch mounting hole at top and bottom and is fastened to manhole walls with  $\frac{1}{2} \times 4$ -inch expansion bolts. Anchor bolt No. 2246 is also used for this purpose. It consists of hook head which is cemented in masonry, opposite end being threaded and equipped with nut for attachment.

Number of holes, 14. Hook hole spacing,  $1\frac{1}{2}$  inches; bolt hole spacing,  $25\frac{1}{2}$  inches. Length

overall,  $27\frac{1}{2}$  inches.

**Hubbard Manhole Ladders****Hot Galvanized**

Made to the specifications of the largest telephone and central station companies.

Rung spacing, 12 inches. Width inside, 12 inches.

Rungs are  $\frac{5}{8}$  inch round.

No.	Per 100	Overall Feet	No. of Rungs	Ship. Wt. Lb. Per 100
*9110	<b>\$953.54</b>	6	5	2500

**No. 9145 Hubbard Plain Dowel Pins****For Clay Conduit**

Used in the ends of multiple duct clay conduit for preserving alignment of adjacent sections. Made of  $\frac{5}{16}$ -inch diameter steel with a shoulder in the center. Overall length,  $3\frac{3}{4}$  inches. Collar diameter,  $\frac{5}{8}$  inch.

No. 9145, Ship. Wt. 9 Pounds... per 100 **\$3.39**

**Hubbard Pulling-In Irons****For Manholes****Hot Galvanized**

This iron is set into the concrete or brick walls of street vaults opposite duct entrances to provide a convenient and strong attachment for block and tackle when installing or removing cables.

No. ....	*9119	*9120

†A. T. & T. Co. Std. \*Western Union Std.

**Hubbard Cable Rack Extensions****Hot Galvanized**

Used for mounting racks away from the wall because of obstructions, limited space or to escape water seepage. If used away from wall, racks can be mounted on approximately  $4\frac{1}{2}$  inches less wall space than is needed for the rack. If extension is turned around and mounted, it will occupy 10 to 13 inches more wall space than the length of rack.

Mounting is generally accomplished by means of two No. 13,  $\frac{1}{2} \times 4$ -inch Peirce Expansion Bolts. Furnished 1 and  $1\frac{1}{4}$  inches wide in  $\frac{1}{2}$ -inch stock. Mounting holes are for  $\frac{1}{2}$ -inch bolts. Order two for each rack mounting.

## Electrical Wiring Symbols

## General Outlets

Symbol	Description
	Outlet.
	Blanked Outlet.
	Drop Cord.
	Electrical Outlet—for Use Only When Circle Used Alone Might Be Confused with Columns, plumbing symbols, Etc.
	Fan Outlet.
	Junction Box.
	Lamp Holder.
	Lamp Holder with Pull Switch.
	Pull Switch.
	Outlet for Vapor Discharge Lamp.
	Exit Light Outlet.
	Clock Outlet (Specify Voltage).

## Convenience Outlets

	Duplex Convenience Outlet.
	Convenience Outlet Other Than Duplex. 1=Single, 3=Triplex, Etc.
	Weatherproof Convenience Outlet.
	Range Outlet.
	Switch and Convenience Outlet.
	Radio and Convenience Outlet.
	Special Purpose Outlet (Desc. in Spec.)
	Floor Outlet.

## Switch Outlets

S	Single Pole Switch.
S <sub>2</sub>	Double Pole Switch.
S <sub>3</sub>	Three Way Switch.
S <sub>4</sub>	Four Way Switch.
S <sub>D</sub>	Automatic Door Switch.
S <sub>E</sub>	Electroliner Switch.
S <sub>K</sub>	Key Operated Switch.
S <sub>P</sub>	Switch and Pilot Lamp.
S <sub>CB</sub>	Circuit Breaker.
S <sub>WCB</sub>	Weatherproof Circuit Breaker.
S <sub>MC</sub>	Momentary Contact Switch.
S <sub>RC</sub>	Remote Control Switch.
S <sub>WP</sub>	Weatherproof Switch.
S <sub>F</sub>	Fused Switch.
S <sub>WF</sub>	Weatherproof Fused Switch.

## Special Outlets

	Any Standard Symbol As Given Above with the Addition of a Lower Case Subscript Letter May Be Used to Designate Some Special Variation of Standard Equipment of Particular Interest In a Specific Set of Architectural Plans.
	
	

When Used They Must Be Listed In the Key of Symbols On Each Drawing and If Necessary Further Described In the Specifications.

These symbols have been prepared by a technical sub-committee of ASA, Committee Z32, Standardization of Graphical Symbols and Abbreviations for use on Drawings, and have been submitted for approval as an American Standard to replace the symbols shown in ASA C10-1924.

The electrical symbols for architectural plans as finally approved by the ASA as an American Standard will be announced by that body in due course of time.

## Panels, Circuits and Miscellaneous

Symbol	Description
	Lighting Panel.
	Power Panel.
	Branch Circuit—Concealed in Ceiling or Wall.
	Branch Circuit—Concealed in Floor.
	Branch Circuit Exposed.
	Home Run to Panel Board. Indicate Number of Circuits by Number of Arrows.
	Note: Any Circuit without Further Designation Indicates a Two-Wire Circuit. For a Greater Number of Wires Indicate As Follows:  (3 Wires),  (4 Wires), Etc.
	Feeders. Note: Use Heavy Lines and Designate by Number Corresponding to Listing in Feeder Schedule.
	Underfloor Duct & Junction Box—Triple System. Note: For Double or Single Systems Eliminate One or Two Lines. This Symbol Is Equally Adaptable to Auxiliary System Layouts.
	Generator.
	Motor.
	Instrument.
	Power (Or Draw to Scale) Transformer.
	Controller.
	Isolating Switch.

## Auxiliary Systems

	Push Button.
	Buzzer.
	Bell.
	Annunciator.
	Outside Telephone.
	Interconnecting Telephone.
	Telephone Switchboard.
	Bell-Ringing Transformer.
	Electric Door Opener.
	Fire Alarm Bell.
	Fire Alarm Station.
	City Fire Alarm Station.
	Fire Alarm Central Station.
	Automatic Fire Alarm Device.
	Watchman's Station.
	Watchman's Central Station.
	Horn.
	Nurse's Signal Plug.
	Maid's Signal Plug.
	Radio Outlet.
	Signal Central Station.
	Interconnection Box.
	Battery.
	Auxiliary System Circuits.

Note: Any Line without Further Designation Indicates a 2-Wire Circuit. For a Greater Number of Wires Designate with Numerals in Manner Similar to —12-No. 18W-3/4"-C., or Designated by Number Corresponding to Listing in Schedule.

Special Auxiliary Outlets.

Sub-Script Letters Refer to Notes on Plans or Detailed Description in Specifications.

 a,b,c

## Definitions of Electrical Terms

**Air Gap.** Air space in a magnetic circuit through which the magnetic flux must pass. It should be as short as possible as the reluctance of air is very high.

**Ampere.** The unit of current flow of electricity. It means the same with reference to electricity, as does the number of gallons per minute, when referring to the flow of water through a pipe. A 60-watt, 110-volt tungsten lamp takes 0.545 ampere to make it give the proper light.

**Ampere-Hour.** This expression is used to describe the capacity of a storage battery and corresponds to the number of gallons a tank will hold when talking about water. Ampere-hours are obtained by multiplying the number of amperes flowing by the length of time in hours which they flow. Example: How many ampere-hours are required to light four 60-watt, 110-volt tungsten lamps for 3 hours. As stated above one lamp takes 0.545 ampere, so four lamps takes 4 times 0.545 or 2.18 amperes; 2.18 times 3 equals 6.54 ampere-hours.

**Ampere-Turns.** Turns of wire in a coil times the ampere current flowing. It is used as a measure of magnetizing force, which varies directly as the number of ampere-turns.

**Apparent Load or Apparent Power.** Current in amperes times electromotive force in volts gives apparent load in watts. Used for alternating current circuits because the current flow is not in phase with the electromotive force, hence, amperes times volts does not give the real energy load.

**Automatic Battery-Charging Switch.** An automatic switch for opening the circuit between the battery and the generator when for any reason the generator voltage drops below battery voltage. This switch also closes automatically when the generator voltage is at the proper value for charging the battery or lighting the lamps.

**Candlepower.** The unit for measuring strength of a source of light. The usual practical standard is a carefully standardized incandescent lamp, comparison being made by means of a photometer. Ordinary tallow candle gives about 1 c.p.; flat wick oil lamp, 6 c.p.; 60-watt tungsten bulb, 40 c.p.

**Foot-Candle.** Same as candle-foot. The illumination produced at 1 foot from a light of 1 candlepower; illumination varies as the strength of the light source and inversely as the square of the distance from that light source.

**Circular-Mil.** The area of a circle 0.001 in diameter. The circular mils area of a wire varies as the square of the diameter: For No. 36 B & S wire, the diameter is 0.0005 in. and the area 25 circular-mils. For No. 14 wire, the diameter is 0.06408 in. or 64.08 mils and the area is 64.08<sup>2</sup> or 4107 cir. mils.

**Coil Wound Motor.** One in which the armature winding is made up in formed coils then placed on the core and the coil leads connected in proper order.

**Commutating Pole.** A small pole piece on motor generator, usually placed midway between the main pole pieces and provided with a winding to neutralize the magnetic effect of the armature current so as to avoid distortion of the magnetic field with change of load.

**Compensating Winding.** A winding placed on the field poles either to increase voltage as load increases, thus making up for loss of potential in armature and transmission lines, or on one tip of the poles to offset the magnetic effect of armature current and prevent distortion of the magnetic field. The term is also used for alternating-current machines where the compensating current is rectified from alternating, as distinguished from compound winding for direct-current machines.

Continued

## Definitions of Electrical Terms

**Compound-Wound.** Applied to direct-current machines having a series field coil to vary the field magnetism as the load varies, in addition to a shunt field coil for main excitation. The compound coil may be proportioned to add just enough voltage to make up for drop in potential through the armature, (flat compounded), or it may increase the voltage as load increases so as to make up for line drop, (over compounded).

**Condenser.** An electrical device for storing a charge of electricity and returning it to the line. It is used to balance the inductance of a circuit, since its action is opposite in phase to that of inductive apparatus, i.e., it throws the current ahead of the e.m.f. in phase. It is made of alternate plates of tinfoil and insulating material, the size of plates and thickness of insulation determining the capacity for holding electric charge. Capacity is measured, practically, in microfarads or millionths of a farad.

**Dielectric.** A non-conducting or insulating material. The dielectric value of a material is measured by comparing it with that of a like thickness of air taken as unity. Glass is 3 to 8; porcelain, 4.4; treated paper, 2 to 4; paraffin and various forms of rubber, 2.2 to 2.5; mica, 6; water, 80.

**Electro-Magnet.** A core of iron or steel, solid or laminated, surrounded by a coil of wire through which electric current is passed. The coil, carrying current, produces a magnetic field and the core becomes a magnet. Without the core, the coil is known as a solenoid.

**Electrolyte.** The liquid used in a storage battery. It consists of a small portion of sulphuric acid mixed with pure distilled water.

**Exciting Current.** Current used for energizing the field coils of a motor or generator to create magnetic flux in the pole pieces.

**Hysteresis.** The quality of iron which causes lagging of the induced magnetism behind the magnetizing force. When the magnetic field is reversed, this causes a loss varying with the number of reversals per second, with the 1.6 power of the maximum value of magnetic density in the iron and with the volume of iron in the magnetic field.

**Induction Motor.** One in which rotor current is set up by transformer action from alternating currents supplied to the stator windings. The rotor currents are induced by those in the stator, hence the name—induction motor.

**Inductance.** The coefficient of self-induction of a circuit. The effect is to cause current to lag behind electromotive force in phase. It depends on the size and shape of the circuit, cross-section and shape of conductor, magnetic properties of the conductor and the surrounding medium and on the frequency of the current reversal and resistance of the conductor. It is, therefore, difficult to compute except for simple wire circuits suspended in air. The unit for measurement is the henry, or the millihenry (1/1000 of a henry).

**Line Loss.** Energy used up in overcoming the resistance of the transmission line to flow of electric current. Its result is drop in voltage, which varies with resistance of the line and as the square of the current flowing. Also known as I<sup>2</sup>R loss.

**Magnetic Density.** Magnetic lines per unit of area of cross-section of the magnetic circuit, also known as magnetic induction. One magnetic line per square of the centimeter is known as a gauss and the magnetic density, B, in gausses is equal to the magnetizing force, H, times the permeability of the material at the point considered. Permeability of air is 1.

Continued

## Definitions of Electrical Terms

## Concluded

**Magnetic Flux.** Total of magnetic lines in a circuit. One line is known as a maxwell and the magnetic flux is equal to the average magnetic density times the area of cross-section of the magnetic circuit. Except for leakage, the magnetic flux will be the same at all parts of a magnetic circuit but the magnetic density will vary with the area of cross-section of different parts. The symbol is F.

**Magnetizing Force.** The force per unit of length of solenoid. It depends on the number of turns and the current flowing. The symbol is H.

**Magnetomotive Force.** The total magnetizing force developed by a solenoid, or required to set up a given density through a magnetic circuit or part of a circuit. The magnetomotive force for each part of a circuit will depend on the material in that part of the circuit and the length of the magnetic path through it. The unit in the C.G.S. system is the gilbert but it is customary to express magnetomotive force in ampere-turns either per inch of length of the magnetic path or total for the circuit.

**Mil.** 1/1000 of an inch.

**Ohm.** The unit of electrical resistance about equivalent to the resistance of 400 feet of common iron telegraph wire.

**Phase.** The relative time of change in values of current or electromotive force. Values which change exactly together are in phase. Difference in phase is expressed in degrees, a complete cycle or double reversal being taken as 360 degrees. A 180-degree phase difference is complete opposition in phase.

**Permeability.** The ratio of magnetic induction or density in a magnetic circuit to the magnetizing force. It is the opposite of reluctivity and is denoted by symbol  $\mu$ .

**Phase Advancer.** A synchronous motor used as a condenser to advance the phase of the lagging current in a circuit and bring it more nearly in phase with the electromotive force.

**Photometer.** An apparatus for measuring the intensity of a source of light by comparison with a known standard source. Various methods of comparison are employed to compare the illumination from two sources.

**Potential.** Voltage, or difference in electric pressure between two parts of a circuit or between a circuit and an outside point.

**Power Factor.** The relation of real to apparent power in an alternating-current circuit. It depends on the difference in phase between current and electromotive force and is equal to the cosine of the angle of phase lag or lead of the current.

**Primary Cell.** A battery cell which generates electromotive force by direct chemical action of the electrolyte on a metal, the metal usually being destroyed in the process.

**Real Power or Actual Power** in an alternating current circuit is that which is measured only with a wattmeter.

**Regulation.** Steadiness of maintaining the value of electromotive force or current. Controlled by generator or transformer action or by a special regulator. Good regulation should hold voltage variation within 3 per cent of normal.

**Repulsion Motor.** An a.c. motor which operates by repulsion of armature conductors by the stator field. It has low starting torque on full load, tendency to spark and rather low efficiency.

**Reluctance.** Magnetic resistance or opposition to the passage of magnetic lines of force. Unit reluctance, the oersted, is that of a cubic centimeter of air. It is the ratio of magnetomotive force to magnetic flux. It is practically the same for all non-magnetic materials but, for iron and steel, it increases with the increase of magnetic density although not in direct proportion.

**Resistivity.** The specific resistance of a substance; the resistance in ohms of a centimeter cube of the material to flow of current between opposite faces.

## Equivalent Values in Different Units

	.0236 H.P. per sq. ft.

## Wiring Formula

Ohm's law is practically the basis for the various formulae in general use for determining the proper size of wire to use to carry various currents. It is essential to know the amount of current expressed in amperes, the distance, and to decide upon the loss to allow in transmission; the best rule is as follows:

The cross section (CM) of the necessary wire is found by multiplying twice the distance one way (2D) by the amount of current expressed in amperes (C) and this by the resistance of one mil-foot (10.7) and dividing by the loss in transmission expressed in volts (v).

$$\text{or, CM} = \frac{2D \times C \times 10.7}{v} \text{ or, CM} = \frac{D \times C \times 21.4}{v}$$

## Equivalent Values in Different Units

## Equivalent of Electrical Units

1 Hp. =	33,000 foot-pounds per minute 746 watts 42.746 BTU. (British Thermal Unit) per minute 2,564.76 BTU. per hour
1 Kw. =	44,235 foot-pounds per minute 1.34 Hp. 0.955 BTU. per second 57.3 BTU. per minute 3,438 BTU. per hour
1 BTU =	772 foot-pounds 17,452 watt minutes 0.2909 watt hours.
1 Watt =	44.236 foot-pounds per minute 2,654.16 foot-pounds per hour

Latent heat of evaporation of water = 966 BTU.

Latent heat of melting of water = 142 BTU.

To evaporate 1 lb. water from and at 212° = 16.859 Kw. minutes

To evaporate 1 lb. water from and at 212° = 0.281 Kw. hours

Weight per cu. ft. of water = 62.42 lb.

Weight per gallon of water = 8.33 lb.

## Tables

### Units of Measure

The electrical units are derived from the following mechanical units of the metric system:

METER.—A unit of length equal, approximately, to one ten-millionth part of a quadrant of a meridian of the earth taken through Paris; or, approximately, to 39.37 inches.

GRAMME.—Unit of weight. Weight of a cubic centimeter of water at a temperature of 4 degrees centigrade.

SECOND.—Unit of time. The time of one swing of a pendulum making 86,400 swings in a solar day.

### Electrical Units

VOLT.—Such an electromotive force as would cause a current of one ampere to flow against a resistance of one ohm. Such an electromotive force as would charge a condenser of the capacity of one farad with a quantity of electricity equal to one coulomb.

OHM.—The practical unit of electric resistance. Such a resistance as would limit the flow of electricity under an electromotive force of one volt, to a current of one ampere, or one-coulomb-per-second.

MEG OHM.—1,000,000 ohms.

AMPERE.—The practical unit of electric current. A rate of flow of electricity transmitting one coulomb per second. The current of electricity which would pass through a circuit whose resistance is one ohm, under an electromotive force of one volt.

COULOMB.—The practical unit of electric quantity. Such a quantity of electricity as would pass in one second through a circuit conveying one ampere. The quantity of electricity contained in a condenser of one farad capacity, when subjected to the E. M. F. of one volt.

FARAD.—The practical unit of electric capacity. Such a capacity of a conductor or condenser that one coulomb of electricity is required to produce therein a difference of potential of one volt.

MICROFARAD (MFD).—One-millionth of a farad.

WATT.—A unit of electric power. A volt-ampere. The power developed when 44.25 foot-pounds of work are done in a minute, or 0.7375 foot-pound of work is done in a second.

JOULE.—A volt-coulomb or unit of electric energy or work. The amount of electric work required to raise the potential of one coulomb of electricity one volt. Ten million ergs.

### Ohm's Law

Ohm's law is a method of expressing relationship existing between the electromotive force, current and resistance, and is practically the basis of most electrical computations. It is expressed in various forms, as follows:

$$\text{Current Flow} = \frac{\text{Electromotive Force}}{\text{Resistance}} \text{ or, } I = \frac{E}{R}$$

Electromotive force equals the current flow multiplied by resistance.

Electromotive Force = Current Flow  $\times$  Resistance, or  $E = I \times R$ .

Resistance equals the electromotive force divided by the current flow.

$$\text{Resistance} = \frac{\text{Electromotive Force}}{\text{Current Flow}} \text{ or, } R = \frac{E}{I}$$

I = Amperes. E = Volts. R = Ohms.

Electromotive force varies directly as the current and resistance.

Resistance varies directly with the electromotive force and inversely as the current.

Current varies directly with the electromotive force and inversely as the resistance.

### Mil

The "mil," whose expressed value is  $\frac{\text{One}}{\text{One-Thousandth}}$  (.001) of an inch, is the practical basis for determining the diameters and thereby the area of all wires used as electric conductors. The diameters being given, the area is obtained by the well-known rule, "the area of a circle, in circular units, is equal to the square of its diameter;" hence the square of the diameter of a wire expressed in mils equals the area of its cross section.

$D^2 = A$ , which area is expressed in Circular Mils or CM.; hence  $D^2 = CM$ .

### Electrical Formula for Determining Amperes, Horsepower, Kilowatts and Kilovolt-Amperes

Desired Data	Alternating Current	
	Single Phase	*Two-Phase Four-Wire
Kilowatts	$\frac{I \times E \times P.F.}{1000}$	$\frac{I \times E \times 2 \times P.F.}{1000}$
Kva.	$\frac{I \times E}{1000}$	$\frac{I \times E \times 2}{1000}$
Horsepower Output	$\frac{I \times E \times \% \text{Eff.} \times P.F.}{746}$	$\frac{I \times E \times 2 \times \% \text{Eff.} \times P.F.}{746}$
Amperes when Hp. is Known	$\frac{Hp. \times 746}{E \times \% \text{Eff.} \times P.F.}$	$\frac{Hp. \times 746}{2 \times E \times \% \text{Eff.} \times P.F.}$
Amperes when Kilowatts is Known	$\frac{Kw. \times 1000}{E \times P.F.}$	$\frac{Kw. \times 1000}{2 \times E \times P.F.}$
Amperes when Kva. is Known	$\frac{Kva. \times 1000}{E}$	$\frac{Kva. \times 1000}{2 \times E}$
Desired Data	A.C. Three-Phase	D.C.
Kilowatts	$\frac{I \times E \times 1.73 \times P.F.}{1000}$	$\frac{I \times E}{1000}$
Kva.	$\frac{I \times E \times 1.73}{1000}$	.....
Horsepower Output	$\frac{I \times E \times 1.73 \times \% \text{Eff.} \times P.F.}{746}$	$\frac{I \times E \times \% \text{Eff.}}{746}$
Amperes when Hp. is Known	$\frac{Hp. \times 746}{1.73 \times E \times \% \text{Eff.} \times P.F.}$	$\frac{Hp. \times 746}{E \times \% \text{Eff.}}$
Amperes when Kilowatts is Known	$\frac{Kw. \times 1000}{1.73 \times E \times P.F.}$	$\frac{Kw. \times 1000}{E}$
Amperes when Kva. is Known	$\frac{Kva. \times 1000}{1.73 \times E}$	.....

\*In three-wire, two-phase circuits the current in the common conductor is 1.41 times that in either other conductor.

NOTE.—E=Volts; I=Amperes; %Eff.=Per Cent Efficiency; P.F.=Power Factor.

### Transmission Losses

The following table shows the approximate average 1,000-cycle transmission loss for several types of open wire lines and lead-covered cables. Wet weather and also the approximate maximum length of non-loaded circuit corresponding to about 30 db. loss.

Kind of Circuit	Diameter Inches	Approximate Average 1,000 Cycle Loss Db. per mile	Approx. Max. Length Miles for Loss at 150 Cycles at Voice Frequency

\*Where a service run of conduit or electrical metallic tubing does not exceed 50 feet in length and does not contain more than the equivalent of two quarter-bends from end to end; two No. 4 insulated and one No. 4 bare conductors may be installed in 1-inch conduit or tubing.

The above applies only to complete conduit systems, and does not apply to short sections of conduit used for the protection of exposed wiring from mechanical injury.

8	..	..	..	10	17	25
6	..	..	..	..	..	15

## Bends

Bends of rigid conduit shall be so made that the conduit will not be injured and that the internal diameter of the conduit will not be effectively reduced. The radius of the curve of the inner edge of any field bend shall not be less than shown in the following table:

## Radius of Conduit Bends

Size of Conduit Inches	Conductors Without Lead Sheath Inches	Conductors With Lead Sheath Inches	Size of Conduit Inches	Conductors Without Lead Sheath Inches	Conductors With Lead Sheath Inches
1 1/2	3.7	6.2	3	18.4	30.6

000	167800	19	.0940	.4700	.1730	.06420 .06680
0000	211600	19	.1055	.5280	.2190	.05090 .05240

\*Area given is that of a circle having a diameter equal to the overall diameter of a stranded conductor.

The resistance values given in the last two columns are applicable only to direct current.

## Combination of Conductors

N.E.C. Table 11

For groups or combinations of conductors not included in the preceding tables, it is recommended that the conduit or tubing be of such size that the sum of the cross-sectional areas of the individual conductors will not be more than the percentage of the interior cross-sectional area of the conduit or tubing than as shown in the following table:

Description	No. of Conductors				
	1	2	3	4	Over 4
Conductors (Not Lead-Covered)...	53	31	43	40	40
Lead-Covered Conductors.....	55	30	40	38	35
*For Rewiring Existing Raceways..	60	40	50	50	50

\*For increased load where it is impracticable to increase the size of the raceway due to structural conditions.

## Insulated Cable

**Aluminum Conductors.** For aluminum conductors, the allowable current-carrying capacities shall be taken as 84 per cent of those given in the table for the respective sizes of copper conductor with the same kind of insulation.

**Bare Conductors.** If bare conductors are used with insulated conductors, their allowable current-carrying capacity shall be limited to that permitted for the insulated conductor with which they are used.

**Application of Table.** For open wiring on insulators and for concealed knob-and-tube work, the allowable current-carrying capacities of Table 2 shall be used. For all other recognized wiring methods, the allowable current-carrying capacities of Table 1 shall be used.

**More Than Three Conductors in a Raceway.** Table 1 gives the allowable current-carrying capacity for not more than three conductors in a raceway or cable. If the number of conductors in a raceway or cable is from 4 to 6, the allowable current-carrying capacity of each conductor shall be reduced to 80 per cent of the values in Table 1. If the number of conductors in a raceway or cable is from 7 to 9, the allowable current-carrying capacity of each conductor shall be reduced 70 per cent of the values in Table 1.

**Neutral Conductor.** A neutral conductor which carries only the unbalanced current from other conductors, as in the case of normally balanced circuits of three or more conductors, shall not be counted in determining current-carrying capacities as provided for in the preceding paragraph. (In a 3-wire circuit consisting of two phase wires and the neutral of a 4-

wire, 3-phase system, a common conductor carries approximately the same current as the other conductors and is not therefore considered as a neutral conductor.

**Ultimate Insulation Temperature.** In no case shall conductors be associated together in such a way with respect to the kind of circuit, the wiring method employed, or the number of conductors, that the limiting temperature of the conductors will be exceeded.

**Use of Conductors with Higher Operating Temperatures.** If the room temperature is within 10°C. of the maximum allowable operating temperature of the insulation, it is desirable to use an insulation with a higher maximum allowable operating temperature; although insulation can be used in a room temperature approaching its maximum allowable operating temperature limit if the current is reduced in accordance with the table of correction factors for different room temperatures.

**Voltage Drop.** The allowable current-carrying capacities in Tables 1 and 2 are based on temperature alone and do not take voltage drop into consideration.

**Overcurrent Protection.** If the standard ratings and settings of overcurrent devices do not correspond with the ratings and settings allowed for conductors, the next higher standard rating and setting may be used, but not exceeding 150 per cent of the allowable carrying capacity of the conductor.

**Deterioration of Insulation.** It should be noted that even the best grades of rubber insulation will deteriorate in time, so eventually will need to be replaced.

### National Electrical Code Types of Insulation, Temperature Rating and Use of Various Wires and Cables for Use in Buildings

Trade Name	Type Letter	Max. Oper. Temp.	Insulation	Outer Cover	Special Provisions and Use
Rubber-Covered Fixture Wire	RF-64	{ 60°C. 140°F. }	Code Rubber	Cotton	Fixture wiring limited to 300 volts.

150	...	360.0	180.0	37.0	...	158.0	127.0
200	...	480.0	240.0	49.0	...	210.0	168.0

For full-load currents of 208 and 200-volt motors, increase the corresponding 220-volt motor full-load current by 6 and 10 per cent respectively.

\*Currents are for motors running at speeds usual for belted motors and motors with normal torque characteristics. Motors built for specially low speeds or high torques may require more running current, in which case the nameplate current rating should be used.

†For 90 and 80 per cent power factor, the above figures should be multiplied by 1.1 and 1.25 respectively.

Current in common conductor of 2-Phase, 3-wire system will be 1.41 times value given.

## Motor Characteristics

## Direct-Current Motors

Direct-current motors are divided into three classes, designated according to the method of connecting the armature and field windings as shunt-series and compound-wound.

Alternating-current motors are divided into two general classes, induction and synchronous, while Induction motors are of two types, designated according to the type of rotor winding as the Squirrel-cage type and as the wound-rotor or slip-ring, type.

## Shunt-Wound D.C Motors

This type of motor runs at practically constant speed, regardless of the load. It is the type most generally used in commercial practice and is usually recommended where starting conditions are not unusually severe.

Speed of shunt-wound motors may be regulated in two ways, first, by inserting resistance in series with the armature, thus decreasing the speed; and second, by inserting resistance in the field circuit, thereby increasing the speed. In the former case, the speed will vary with each change in load; in the latter, the speed is practically constant for any setting of the controller. The latter is most generally used for adjustable-speed service, as in the case of machine tools.

## Series-Wound D-C Motors

This type of motor speed varies automatically with the load, increasing as the load decreases. Use of series motors is generally limited to cases where a heavy power demand is necessary to bring the machine up to speed, as in the case of certain elevator and hoist installations, for streetcars, etc. Series-wound motors should never be used where the motor can be started without load, since they will race to a dangerous degree.

## Compound-Wound D-C Motors

A combination of the shunt-wound and series-wound types combines the characteristics of both. Characteristics may be varied by varying the combination of the two windings. Generally used where severe starting conditions are met and constant speed is required at the same time.

## Squirrel-Cage Induction Motors

The most simple and reliable of all electric motors. Essentially a constant speed machine, which is adaptable for uses under all but the most severe starting conditions. Requires little attention as there are no commutator or slip rings, yet operates with good efficiency.

## Wound-Rotor (Slip-Ring) Induction Motors

Used for constant-speed service requiring a heavier starting torque than is obtainable with the squirrel-cage type. Because of its lower starting current, this type is frequently used instead of the squirrel-cage type in the larger sizes.

Wound-rotor motors are also used for varying-speed service. Speed varies with this load, so that they should not be used where constant speed at each adjustment is required, as for machine tools.

## Single-Phase Induction Motors

This motor is used, mostly in small sizes, where polyphase current is not available. Characteristics are not as good as the polyphase motor and for sizes larger than 10 hp., the line disturbance is likely to be objectionable. Are commonly used for light starting and for running loads up to 1/2 hp. Capacitor and repulsion types provide greater torque and are built in sizes up to 10 hp.

## Synchronous Motors

Run at a constant speed fixed by frequency of the system.

Require direct current for excitation and have low starting torque. For large motor-generator sets, frequency changers, air compressors, and similar apparatus which permits starting under a light load, for which they are generally used.

Are used with considerable advantage, particularly on large power systems, because of their inherent ability to improve the power factor of the system.

This table was calculated on a basis of 483.84 pounds per cubic foot for steel wire. Iron wire is a trifle lighter.

The breaking strengths are calculated for 100,000 pounds per square inch throughout, simply for convenience, so that the breaking strength of wires of any strength per square inch may be quickly determined by multiplying the values given in the tables by the ratio between the strength per square inch and 100,000. Thus, a No. 15 wire, with a strength per square inch of 150,000 pounds, has a breaking strength of

$$407 \times \frac{150,000}{100,000} = 610.5 \text{ pounds.}$$
